IC handling precaution

IC's construction makes this part susceptible to damage by static electricity and so take sufficient care in regard to following articles.

1. Need to be put on conductive sheet, to be put in a metallic box and to be wrapped by aluminium foil for transportation and deposit.

2. To use solder iron less than 40W (less than 260°C) of power consumption for soldering. But do not overheat more than 10 second.

3. Do not perform a conductivity test with a tester, etc. Refer to the circuit voltages of each part.

△ Safety component symbol

This symbol is given to important parts which serve to maintain the safety of the product, and which are made to conform to special safety specifications.

Therefore, when replacing a component with this symbol, make absolutely sure that you use a designated part.

NOTES:

- 1) The voltage is the reference value measured with a tester (20 k-ohms/V DC) when there are no signal.
- 2) Resistors with no designation have a rated power of 1/8W and a tolerance of ±5%.
- 3) Capacitors with no designation have a dielectric strength of less than 50WV.
- 4) The only capacitor tolerance indicated are ±5% (J) and ±10% (K).
- 5) Ceramic capacitor symbols:
 - |— For temperature compensation (SL)
 - |— High dielectric constant system (YY)
 - |— High dielectric constant system (YW, YP, YZ)
 - |— Semiconductor ceramic
 - |— For temperature compensation (SH)
