PROTECTION OF EYES FROM LASER BEAM DURING SERVICING

This set employs laser. Therefore, be sure to follow carefully the instructions below when servicing.

WARNING!!

WHEN SERVICING, DO NOT APPROACH THE LASER EXIT WITH THE EYE TOO CLOSELY. IN CASE IT IS NECESSARY TO CONFIRM LASER BEAM EMISSION. BE SURE TO OBSERVE FROM A DISTANCE OF MORE THAN 30cm FROM THE SURFACE OF THE OBJECTIVE LENS ON THE OPTICAL PICK-UP BLOCK.

- Caution: Invisible laser radiation when open and interlocks defeated avoid exposure to beam.
- Advarsel: Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

VAROITUS!

Laiteen Käyttäminen muulla kuin tässä käyttöohjeessa mainitulla tavalla saattaa altistaa käyttäjän turvallisuusluokan 1 ylitävälle näkymättömälle lasersäteilylle.

VARNING!

Om apparaten används på annat sätt än vad som specificeras i denna bruksanvisning, kan användaren utsättas för osynlig laserstråling, som överskrider gränsen för laserklass 1.

CAUTION

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

ATTENTION

L'utilisation de commandes, réglages ou procédures autres que ceux spécifiés peut entraîner une dangereuse exposition aux radiations.

ADVARSEL!

Usynlig laserstråling ved åbning, når sikkerhedsafbrydere er ude af funktion. Undgå udsættelse for stråling.

This Compact Disc player is classified as a CLASS 1 LASER product.

The CLASS 1 LASER PRODUCT label is located on the rear exterior.

Precaution to replace optical block

(KSS - 210A)

Body or clothes electrostatic potential could ruin laser diode in the optical block. Be sure ground body and workbench, and use care the clothes do not touch the diode.

- 1) After the connection, remove solder shown in the right figure.

The block diagram illustrates the audio amplifier circuit. It begins with an 'INPUT' (1) connected to an 'AF' (Audio Frequency) amplifier. The output of the AF amplifier goes to a 'VCO ADJ.' (Variable Control Oscillator Adjust) block (2), which then feeds into a 'PHASE DETECTOR'. The output of the phase detector is connected to a 'DC' block (4), which in turn feeds into a 'VCO 76KHz' block. The output of the VCO 76KHz block is split: one path goes through a '1/2' (1/2) block to a 'STEREO SWITCH', and the other path goes through a '1/2' block to a '19KHz' oscillator. The 19KHz oscillator is connected to a 'PILOT DETECTOR', which then feeds into a 'TRIGGER' block. The output of the trigger block is connected to a 'STEREO SWITCH' and a '38KHz' oscillator. The 38KHz oscillator is connected to a 'STEREO DECODER'. The output of the stereo decoder is split: one path goes to a 'LEFT' output (8) and the other to a 'RIGHT' output (9). The 'P.F.-2' (Power Factor 2) block is connected to the 'RIGHT' output (9) and a 'LEO' (Line Output) block (6). The 'LEO' block is connected to a 'STABILIZED POWER SUPPLY' block, which is connected to 'GND' (5) and 'VCC' (3). The 'VCO ADJ.' block (2) is also connected to the 'VCO 76KHz' block (4) and the 'VCO ADJ.' block (2).

ADJUSTMENT (CD)

Note: Connect a probe (10:1) of the oscilloscope or the frequency counter to a test point.

1. Focus Bias Adjustment
Make the focus bias adjustment when replacing and repairing the optical block.

- 1) Connect an oscilloscope to the test points TP1 (RF) and TP2 (VREF).
- 2) Turn on the power switch.
- 3) Insert the test disc TCD-782 (YEDS-18) and play back the second composition.
- 4) Adjust SFR2 so that RF signal of the test point TP1 (RF) is MAX and CLEARREST.

Note: The current of the laser signal can be checked with the voltages on both sides of R1 (22 Ω). The difference for the specified value shown on the level must be within ±6.0mA.

$$\text{Laser current } I_{op} = \frac{\text{Voltage across R1}}{22 \Omega}$$

2. RADIAL Balance Adjustment

- 1) Connect an oscilloscope to the test points TP3 (TE) and TP2 (VREF).
- 2) Turn on the power switch.
- 3) Insert test disc TCD-782 (YEDS-18) and press the PLAY button.
- 4) Connect the intermediate point of SFR3 to TP2 (VREF).
- 5) Adjust SFR1 so that the waveform on the oscilloscope is vertically symmetrical as shown in the figure below.
- 6) After the adjustment is completed, remove the connected lead wires from the terminals.

3. RADIAL Gain Adjustment

A servo analyzer is necessary in order to perform this adjustment exactly. However, this gain has margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick-up follow-up (vertical and horizontal) relative to mechanical noise and mechanical shock when 2-axis device operates. However, as these reciprocate, the adjustment is at the point where both are satisfied.

- When gain is raised, the noise increases when the 2-axis device operates.
- When gain is lowered, it is more susceptible to mechanical shock and skipping occurs more easily.

When gain adjustment is off, the symptoms below appear.

Symptoms	Gain	(Focus)	Tracking
● The time until music starts becomes longer for STOP→▶PLAY or automatic selection (◀▶ buttons pressed.) (Normally takes about 2 seconds.)		low	low or high
● Music does not start and disc continues to rotate for STOP→▶PLAY or automatic selection (◀▶ buttons pressed.)		—	low
● Disc stops to rotate shortly after STOP→▶PLAY.		low or high	—
● Sound is interrupted during PLAY. Or time counter display stops.		—	low
● More noises during the 2-axis device operation.		high	high

The following is simple adjustment method.

— Simple adjustment —

Note : Since exact adjustment cannot be performed, remember the positions of the controls before the performing the adjustment. If the positions after the simple adjustment are only a little different, return the controls to the original position.

Procedure

- 1) Keep the set horizontal.(If the set is not kept horizontally, this adjustment cannot be performed due to the gravity against the 2-axis device.)
- 2) Insert the test disc TCD-782 (YEDS-18) and play back the second composition.
- 3) Connect an oscilloscope to TP3 (TE),TP2 (VREF) of the CD C.B.

- 4) Adjust SFR3 so that the waveform appears as shown in the figure below.(tracking gain adjustment)

High tracking gain

The frequency of the fundamental wave is higher than in low gain.

● Incorrect example

Low tracking gain

The fundamental wave appears as compared with the waveform adjusted.
