HOW TO CHECK THE CENTER VOLTAGE

AND THE IDLING CURRENT OF POWER AMPLIFIER

NOTE : Allow the set to warm up at least to 10 minutes before you begin the following procedure.

Fig. 34

Fig. 35

Connection of a measurement instrument as shown Fig.

This circuit is the standard one of main amplifier.

* Turn VOLUME control to minimum

- (1) Connect the probe of VTVM (D.C.) to a positive of output point. And connect the ground lead of VTVM (D.C.) to a chassis.
- (2) Insert an ammeter and a jumper wire together as shown Fig.

NOTE : After the power switch has been turned on and jumper wire has been take off, adjust the idlling current in order to protect the ammeter against being damaged by surge current.

* Turn POWER SWITCH on

- (1) VTVM (D.C.) aught to Zero V. if VTVM (D.C.) is not Zero V adjust R412 to VTVM (D.C.) reading of zero V.
- (2) An ammeter aught to 15~20mA if an ammeter reading of volume are not 15~20mA, adjust R420 to an ammeter reading of 15~20mA.

NOTE : The adjustment of the center voltage of power amplifier should be performed before measuring the idlling current.

PROTECTOR ADJUSTMENT

The protector circuit dosen't operate at 4Ω load, 14V output. (All channels are driven).
Adjust the R522 in order to actil activate the protector circuit by grounding the speaker terminals when the out put is 2 volt at 8Ω load.
And adjust R513 in order to activate the protector circuit by applying DC 0.25 volt to point "A".

VU METER control adjustment

Fig. 38

1. Connect the 8Ω Dummy load to the speaker terminals.
2. Add "1kHz" to the power amplifiers terminals (Main in) Simultaneously on all channels.
3. Set the meter level switch on the "high" position.
4. Controll the input signal in order to take the output of 3V at the speaker terminals and turn the "VR601~604" to the left or right so that meters should point out "0" VU.

CHECK POINT AFTER REPAIR

Please make sure of the following respect when repair was completed.

1. Normal gain and output are obtained.
2. Booth high low range of audio frequency are not decreased exceptionaly.
3. Normal fuse used 100~120V
