

ONKYO® SERVICE MANUAL

Ref NO. 3684

Apr. 2001

USB Digital Audio Processor MODEL MSE-U33HB

Features

- High-Quality Audio with the USB Interface
- High-Quality Digital Recording from Analog Sources
- Equipped with 3-Port USB Hub functionality
- Bundled with the stereo digital audio editing software Peak LE™ 2.5
- Bundled with the revolutionary VJ (Video Jockey) software Rhythmic Circle FUSE

Main specifications

Type	USB digital audio processor
Connection method	USB (Universal Serial Bus Ver. 1.1)
Sampling rate	48 kHz or less
Frequency characteristics	0.3 Hz to 20 kHz (Line out +0/-0.5 dB)
Signal-to-noise ratio	100 dB (A-filter)
Total harmonic distortion	0.002% (1 kHz, 0 dB)
Output level	1.0 Vrms
Line input level	250 mVrms
Microphone input sensitivity	17 mVrms
Power supply	DC 7.5 V, 1500 mA (exclusive adapter)
Current dissipation	126 mA
Dimensions (W x H x D)	130 x 29.6 x 105 mm / 5 1/8" x 1 3/16" x 4 1/8"
Weight	0.2 kg / 0.4 lbs

* Specifications and features are subject to change without notice.

Accessories

The MSE-U33HB comes supplied with the accessories shown below. Make sure that these accessories are present at the time of purchase. The number in parenthesis is the quantity of that accessory.

- ☐ USB digital audio processor (1)
- ☐ RCA-pin cord (1)
- ☐ This instruction manual (1)
- ☐ Installation CD-ROM (1)
- For the contents, refer to the file "Menu.html" on the CD-ROM.
- ☐ USB cable (1)
- ☐ AC adapter (1)
- ☐ Warranty and user registration card (1)
- ☐ Peak LE registration card (1)
- ☐ Quick setup guide (1)

Making the connections

■ Before making the connections

Before connecting the MSE-U33HB to your Macintosh computer, be sure to verify that the conditions given below are fulfilled.

Mac OS operation system

Verify that the Mac OS 9.0.4 + Multimedia Update 1.0 or above operating system (Mac OS 9.1 or later is recommended) boots up properly on your Macintosh computer.

* The MSE-U33HB will not operate properly in a Mac OS 9.0 or earlier environment. If your current operating system is Mac OS 9.0, then you will need to upgrade to Mac OS 9.0.4 + Multimedia Update 1.0 or later. For information regarding system software upgrades, refer to the instruction manual that came with your Macintosh.

About your CD-ROM drive

The software required to setup your USB digital audio processor is contained on a CD-ROM, so a CD-ROM drive is necessary for installation of software and proper operation. Before beginning the setup procedures, make sure that your CD-ROM drive operates properly.

Caution:

Macintosh computers that are not standard-equipped with a USB port are not supported by the MSE-U33HB. If a USB port was added by an expansion board or some other means, then the proper operation of the MSE-U33HB is not guaranteed.

System requirements

- Power Macintosh or PowerBook standard-equipped with a USB port, iMAC, or iBook
- 20 MB or greater free hard drive space (FUSE requires additional 200 MB)
- 64 MB or greater RAM (128 MB or greater is recommended)
- CD-ROM drive (or equivalent)
- Mac OS 9.0.4 + Multimedia Update 1.0 or above (Mac OS 9.1 or later is recommended)

MSE-U33HB

Even with Macintosh computers that satisfy the above requirements, differences in design specifications for the various Macintosh series' and differences in user environments may cause the MSE-U33HB to not operate properly. For updates on operation restrictions and confirmation information, consult the Onkyo home page listed at the back of this manual.

Connecting the MSE-U33HB

■ Connecting to your Macintosh computer

1. Connect the A-type plug () of the supplied USB cable to your Macintosh computer.

Note:

If there are two or more USB ports on your computer, you can connect the cable to any one of them.

2. Connect the B-type plug () to the USB port on the MSE-U33HB.

Note:

Decrease the volume of the speakers before connecting or disconnecting the plug.

* The location and number of USB ports on your computer may differ from the figure shown here. The figure shown here is one example.

■ Connecting the AC adapter

To supply power to the USB device connected to the USB down port of the MSE-U33HB, be sure to connect the AC adapter.

Caution:

The supplied AC adapter is for exclusive use with the MSE-U33HB. Do not use it with other devices. Also, do not use other AC adapters with the MSE-U33HB for they may damage the unit or cause other malfunctions.

Connecting to other devices

Before connecting devices that do not use the USB interface, be sure to first turn off all the devices.

- Connecting to your audio system
- Connecting a microphone
- Connecting to speakers with internal amplifiers

Note:

The microphone input supports plug-in power type microphones.

■ Connecting other devices that have USB ports (i.e. mice, joy sticks, and printers)

Before making any connections or disconnections, turn down the speaker volumes.

Troubleshooting

Device is not recognized.

- Faulty connection.
- Referring to pages 8 to 9, make sure that devices are connected properly with USB cables.
- Problem with hub used for connection.
- If you are using a hub, make sure that hub is working properly.

No sound is heard.

- Mute is turned on.
- Go to Output tab in Sound Control Panel and deselect Mute checkbox.
- Output level is too low.
- Go to Output tab in Sound Control Panel and raise volume level to an appropriate level.
- Another audio output device is being used.
- Go to Output tab in Sound Control Panel and select USB Audio in Choose a device for sound output field.
- Problem with external amplifier or speaker.
- Make sure that your external amplifier and speakers are properly connected to line output jacks. Also, check power supply and volume for external amplifier and speakers.

Left and right outputs are wrong.

- Set balance to the middle setting.
- Adjust using balance slide bar in QuickTime player (or the software you are using).
- There is a problem with external amplifier or speakers.
- Check balance at the external amplifier and speakers.

Audio is not output from CD-ROM drive.

- If your system does not support the digital audio output stream from the CD-ROM drive, audio will not be output from CD-ROM using USB interface. In this case, connect the audio output from the CD-ROM drive (e.g. headphones output) to the line input and adjust the volume to an appropriate level.

Background music for games is not heard.

- CD audio is used for background music.
- See "Audio is not output from the CD-ROM drive" above.

Microphone audio cannot be input.

- Selection of sound input device is mistaken.
- Open Output of the Sound Control Panel and select USB Audio from the Choose a device for sound output field.
- Faulty microphone connection.
- Properly connect the microphone.

Troubleshooting

Microphone audio cannot be input. (continued)

- Microphone is not compatible.
- Refer to page 9 and connect a compatible microphone.
- Microphone/line input selector is set to line input.
- Set to microphone input.
- Input level adjustment dial is at minimum.
- Adjust level to an appropriate level.

Line audio cannot be input.

- Selection of sound input device is mistaken.
- Open Output of the Sound Control Panel and select USB Audio from the Choose a device for sound output field.
- Faulty line input connection.
- Properly connect line input from external device.
- Audio is not properly output from external device.
- Make sure that audio is output from external device.
- Microphone/line input selector is set to microphone input.
- Set to line input.
- Input level adjustment dial is at minimum.
- Adjust the level to an appropriate level.

Audio cuts out.

- Under excessive load during audio input or output.
- During recording, do not perform operations that will overload the CPU.
- Other USB device is being connected during input or output.
- Connecting or disconnecting USB devices during playback or recording will cause audio to cut in and out.
- Virtual memory is being used.
- Open Memory Control Panel and turn off virtual memory.

Excessive noise.

- Television or other device that creates a strong magnetic field is placed nearby.
- Place sufficiently far away from the television or other device.
- * Recordings that you make are for your private use. Copyright laws strictly forbid any other uses without first receiving express permission from the copyright owner.
