*This resistance measured with condenser C16A shorted to ground.

High impedance VTVM is used to measure the operating voltages.

Unless otherwise specified, resistance values are in ohms, 1/2 watt, and 10% tolerance. Resistors marked with an asterisk (*) are 5% tolerance. Capacitance values smaller than 1 are in microfarads (μF); values greater than 1 are in picofarads (pF). Inductors are in microhenries (μH).
