SAFETY INFORMATION

CAUTION

**CLASS 1
LASER PRODUCT**

The lightning flash with arrowhead, within an equilateral triangle is intended to alert the user of the presence of uninsulated "dangerous voltage" within the product's enclosure; that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user of the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

THIS DEVICE COMPLIES WITH PART 15 OF THE FCC RULES.
OPERATION IS SUBJECT TO THE FOLLOWING TWO CONDITIONS:-
(1) THIS DEVICE MAY NOT CAUSE HARMFUL INTERFERENCE, AND
(2) THIS DEVICE MUST ACCEPT ANY INTERFERENCE RECEIVED,
INCLUDING INTERFERENCE THAT MAY CAUSE UNDESIRABLE
OPERATION.

SERVICE SAFETY PRECAUTIONS

1. Replacing the fuses

CAUTION: FOR CONTINUED PROTECTION AGAINST THE RISK OF FIRE REPLACE ONLY WITH SAME TYPE OF FUSE.

Reference No	Part Number	Description
FC201 *C $\triangle$	5120-0050+0	FUSE T1.6A/250V 5X20
FC201 *AH $\triangle$	5120-0052+0	FUSE T1.6A 250V 5X20
FC202, FC204, FC205 *C $\triangle$	5120-0018+0	FUSE T1A 250V 5X20
FC202, FC204, FC205 *AH $\triangle$	5120-0020+0	FU T1A 250V UL/CSA 5X20
FC203 *C $\triangle$	5120-0035+0	FU T100MA 250V
FC203 *AH $\triangle$	5120-0036+0	FUSE 250V 100MA T 5X20

NOTE:

<*AH > : USA, CANADIAN MODEL ONLY.

<*C > : EUROPEAN MODEL ONLY.

2. Safety check out

(Only U.S.A. model)

Before returning the product to the customer, make leakage current or resistance measurements to determine that exposed parts are acceptably insulated from the supply circuit.

Parts marked with the symbol $\triangle$ are critical with regard to the risk of fire and electric shock. Replace only with parts recommended by the manufacturer.

DISASSEMBLY INSTRUCTIONS

1. Remove machine screws M 4.0 x 6.0 (① to ④) from the side panels.
Remove tapping screw 3.0 x 8.5 (⑤) from the back panel.
Refer to **Figure No.1**.

Figure No.1

2. Pull both sides of the TOP COVER slightly outwards (⑥) and tilt approx. 35° and then remove in the direction as indicated by the arrow (⑦). Refer to **Figure No.2**.

Figure No.2.

RF PATTERN TESTING

NAD - C 545BEE PCB TESTING POINTS DIAGRAM

TESTING PROCEDURE

- (1) Load the test disc (Sony Test CD YEDS-7) and set the unit into PLAY mode.
- (2) Connect the scope to C7 (Pin 81 of IC1) and DGND (C32).
 Scope setting: Coupling : AC.
 Vertical sensitivity : 0.2 V/ div.
 Horizontal time base : 0.5 μ S/div.
- (3) Observe the waveform is 1.5V p-p $\pm$ 5% and the eye pattern is at its best shape (see **FIG. 1**).

FIG. 1 (a)

FIG. 1 (b) Poor eye pattern

FIG. 1 (C) Good eye pattern

IMPORTANT NOTES

INSTRUCTION FOR HANDLING OPTICAL SYSTEM BLOCK PICK-UP

Electrostatic breakdown of the laser diode in the optical system block may occur due to a potential difference caused by electrostatic charge accumulated on clothing, human body, etc. A ground must be provided as follows to prevent any electrostatic charge during unpacking or repair work.

1. Ground for Human Body

Be sure to wear a ground band (1M ohm) that is properly to remove any static electricity that may be charged on the body.

2. Ground for Work Bench

Be sure to place a conductive sheet (1M ohm) or copper plate with proper grounding on the work bench or other surface on which the pick-up is to be placed.

3. Because the static electricity charge on the clothing does not discharge through the body grounding band, do not let clothing to get in contact with the pick-up unit.

INCORRECT

CORRECT

NOTE: Laser diodes are so susceptible to damage from static electricity that even if a static discharge does not ruin the diode, it can shorten its life or cause it to work improperly.

PRECAUTIONS FOR CHECKING BEAM EMISSION

The laser beam of this unit is focused on the reflecting surface of the objective lens in the optical system block. Therefore, keep your eyes at least 12 inches (30 cm) away from the objective lens when the laser diode is **ON**. (Operation Check Method for Laser Diode and Focus Search Function.)

When the **POWER** switch is turned **ON** after the chucking plate is removed, observe the objective lens and confirm that the following operations are performed properly.

(The optical system should be at the lead-in area position when it is checked at this time.)

(1) The laser should be at the innermost position after the chucking plate is removed.

(2) The diffused light of the laser beam can be seen when the **POWER** switch is turned **ON**.

(3) Vertical (up and down) movement of the objective lens (2 or 3 times) will take place.

PRECAUTIONS WHEN CHANGING LASER PICK-UP

When removing the pick-up assembly, short circuit the PCB tracks on the optical block as show in the drawing in order to protect the pick-up before removal.

NOTE: Replacement pick-up assemblies are supplied with the PCB pattern already protected.

DO NOT REMOVE THE SHORT CIRCUITS UNTIL YOU HAVE FINISHED FITTING THE PICK-UP.

Caution:

Laser diodes are extremely susceptible to damage from static electricity. Even if a static discharge does not ruin the diode, it can shorten its life or cause it to work improperly. When replacing the pick-up, use a conductive mat, a grounded soldering iron, and so on, to protect the laser diode from static damage.

MULTI-KEY TABLE FOR C545BEE (original production)

Item	Content	Multi-key
1	VFD full segment display	STOP + SCAN BACK
2	Playtime total	RANDOM + SCAN FORWARD
3	Eject times count	RANDOM + SCAN BACK

NOTES

New special key functions (MCU v0.4.0. & Servo v4.4.)

-Playtime counter : Random + Scan Forward for 5 sec

-Open tray (Eject times) counter : Random + Scan Back for 5 sec

-Counter reset : Random + Display for 5 sec, then press password 5-4-5-5-6-5 via remote

-Auto-standby on/off : Random + Play for 5 sec.

-VFD full segment display : Press Stop + Scan Back for 5 sec.
