## SPECIFICATIES

|                              |                                         |
|------------------------------|-----------------------------------------|
| Golflengtes                  |                                         |
| FM                           | : 87.5 - 108 MHz                        |
| AM                           | : 513 - 1611 kHz (MG)                   |
|                              | : 146 - 263 kHz (LG)                    |
| Gevoeligheid                 |                                         |
| FM - 98 MHz (75 $\Omega$ )   | : 0,95 $\mu$ V (mono - 26 dB S/R)       |
|                              | : 20 $\mu$ V (stereo - 46 dB S/R)       |
| AM - 600 kHz (300 $\Omega$ ) | : 200 $\mu$ V (26 dB S/R)               |
| AM - 160 kHz (300 $\Omega$ ) | : 320 $\mu$ V (26 dB S/R)               |
| Selectiviteit                |                                         |
| FM                           | : 60 dB (bij 300 kHz buiten resonantie) |
| AM                           | : 60 dB (bij 9 kHz buiten resonantie)   |
| Bandbreedte                  |                                         |
| MF-FM (B 3 dB)               | : 180 kHz                               |
| MF-AM (B 3 dB)               | : 4 kHz                                 |
| Voeding                      | : 110 - 127 - 220 - 240 V, 50 Hz        |
| Vermogensopname              | : $\leq$ 17 W                           |
| Afmetingen bxxhxd            | : 420x68x300 mm.                        |

Veiligheidsbepalingen vereisen, dat het apparaat bij reparatie in zijn oorspronkelijke toestand wordt teruggebracht en dat onderdelen, identiek aan de gespecificeerde, worden toegepast.

## TESTPROGRAMMA

"1" = 5 V  
"0" = 0 V

- 1a. De pinnen 9, 10, 19, 20 (IN) "nul" maken en het apparaat inschakelen. Het  $\mu$ P IC loopt nu het interne testprogramma af. Maakt men hierna de pinnen 9, 10, 19, 20 vrij dan kan men de diverse I/O poorten controleren.  
Door een IN-poort met de overeenkomstige UIT-poort te verbinden, ontstaat er op deze poorten en de overeenkomstige I/O poorten een blok golf.  
B.v. verbind men IN-O (pin 19) met D-O (pin 28), dan verschijnt de blok golf op IN-O (pin 19), op D-O (pin 28) op L-O (pin 15), L-4 (pin 8) en op G-O (pin 21).

- 1b. Om de matrix te controleren moeten 3365 en 3366 worden losgesoldeerd. Verbind men nu een IN-poort met de overeenkomstige L-poort dan ontstaat weer de blok golf op deze poorten.  
Voorbeeld: door SK-FM in te drukken verbindt men IN-3 (pin 20) met L-3 (pin 12).
2. Maakt men pin 4 laag (reset) dan dient op pin 18 een blok golf van 250 kHz te verschijnen.  
Dit houdt in, dat de oscillator, de reset poort (pin 4) en de I/O poort in orde zijn.
3. Op D-O, D-1, D-2, S-O, SK en G-3 ontstaat gedurende 0,5 sec. een pulstrein als er een frequentie opgeslagen wordt, welke nog niet in het geheugen opgeslagen is.

## AFREGELING

## Algemeen

- Bij de afregeling moeten de geïnjecteerde signalen zo klein mogelijk zijn.
- De MF-afregeling gebeurt met een gewobbeld signaal. Voor FM is dit 98 MHz met een zwaai van 250 kHz in een frequentie van 50 Hz. Voor AM is dit 450 kHz met een zwaai van 10 kHz in een frequentie van 50 Hz.

## Gebruikte meetapparaten

- HF-generator
- Oscilloscoop
- DC millivoltmeter
- AC millivoltmeter
- Frequentieteller

FM-afregeling  
FM-IF

-  Afvlakelco 2126 aan pen 6 van 1102 FM-IF unit losmaken  (verbinding A206-A226).  
Schakel een elco van 4.7  $\mu$ F - 40 V over pen 8 van 1102 en massa.

-  5104b ontstemmen.  
 Afstemmen op een sterke zender.

INSTELLINGEN EN CONTROLES

Stoppulscircuit

- Afregelen ≈ 1 min. na inschakelen.
- Input 560 kHz - 1000 Hz modulatie - 30 % sterkte 700 μV.
  - Regel 3147 totdat de spanning op A155 ≤ 1 V. Dan langzaam opregelen totdat de spanning op A155 ≥ 15 V.
  - Geen input. De spanning op A155 is dan ≤ 1 V.
  - Input 600 μV. De spanning op A155 is dan ≤ 1 V.
  - Input 10 mV. De generatorfrequentie variëren (9 kHz). Bij de frequenties 569 kHz en 551 kHz is de spanning op A155 ≤ 1 V.

Selectiviteit + bandbreedte AM

- Input 1500 kHz - modulatie 1000 Hz - 80 % op antenne-ingang
- AC millivoltmeter op of
- Input instellen voor 245 mV op of
- Frequentie van generator variëren (9 kHz).
- Bij de waarden 1509 kHz en 1491 kHz moet de ingangsspanning minimaal met 57 dB verhoogd worden om op ( ) weer 245 mV te krijgen.
- De frequenties, waarbij de ingangsspanning 3 dB hoger moet zijn, zijn 4-5 kHz lager of hoger dan 1500 kHz.

AVR werking

- Input 560 kHz - modulatie 1000 Hz - 30 % op antenne-ingang
- AC millivoltmeter op of
- Input instellen voor 245 mV = 0 dB op of
- Input verhogen tot +20 dB, de output mag min. 4 en max. 10 dB hoger worden.
- Input verhogen tot +60 dB, de output mag min. 4 en max. 10 dB hoger worden.

Selectiviteit en bandbreedte FM

- Input 98 MHz ongemoduleerd op antenne-ingang
- DC millivoltmeter op
- Input instellen voor 0,7 V op
- Frequentie van de generator variëren (300 kHz).
- Bij de waarden 98,3 MHz en 97,7 MHz moet de ingangsspanning minimaal met 60 dB verhoogd worden om op 0,7 V te krijgen.
- De frequenties waarbij de ingangsspanning 3 dB hoger moet zijn, zijn 110-170 kHz lager of hoger dan 98 MHz.

Instellen van de μ-Processor "MF"-dioden

Indien de filters 5101, 5102, 5130 of 5117 worden vervangen moeten de μ-Processor "MF-dioden" opnieuw worden ingesteld.

FM

De dioden 6361, 6362 en 6363 die zich op het synthesizer paneel bevinden moeten aangesloten zijn, eer het apparaat ingeschakeld wordt.

- Input 1 mV, frequentie 99.000 MHz met een modulatiefrequentie van 1 kHz met een zwaai van 75 kHz.
- De verbinding tussen A206 en A226 moet losgemaakt worden.
- Apparaat afstemmen op 99.000 MHz.
- Met manual-up toets: verder afstemmen, totdat de vervorming minimaal is.
- Indien geen vervormingsmeter aanwezig is, dan kan men ook afregelen op minimale wisselspanning op A206
- De display aflezen en apparaat uitschakelen.

Uitgaande van de afgelezen display frequentie en onderstaande tabel, kan men vinden welke dioden er doorgesneden moeten worden

| f display | 6361 | 6362 | 6363 | f-IF       |
|-----------|------|------|------|------------|
| 99,00 MHz | —    | —    | —    | 10.600 MHz |
| 99,02 MHz | X    | —    | —    | 10.625 MHz |
| 99,05 MHz | —    | X    | —    | 10.650 MHz |
| 99,08 MHz | X    | X    | —    | 10.675 MHz |
| 99,10 MHz | —    | —    | X    | 10.700 MHz |
| 99,12 MHz | X    | —    | X    | 10.725 MHz |
| 99,15 MHz | —    | X    | X    | 10.750 MHz |
| 99,18 MHz | X    | X    | X    | 10.775 MHz |

X = diode doorknippen

- Apparaat weer inschakelen en controleren of de minimale vervorming op 99,00 MHz ligt.
- A206 en A226 met elkaar verbinden.

AM

- De dioden 6368 en 6367, die zich op het synthesizer paneel bevinden, moeten beiden aangesloten zijn, eer het apparaat ingeschakeld wordt.
- Input 100 mV, frequentie 549 kHz met een modulatiefrequentie van 1 kHz, 50 % gemoduleerd.
  - Afstemmen op 549 kHz.
  - Met manual-up toets, verder afstemmen totdat de vervorming minimaal is. De display frequentie mag echter niet meer dan 552 kHz bedragen.
  - De display frequentie aflezen en apparaat uitschakelen.

Uitgaande van de afgelezen display frequentie en onderstaande tabel, kan men vinden welke dioden er doorgesneden moeten worden.

| f display | 6367 | 6368 | f-IF    |
|-----------|------|------|---------|
| 549 kHz   | —    | —    | 448 kHz |
| 550 kHz   | —    | X    | 449 kHz |
| 551 kHz   | X    | —    | 450 kHz |
| 552 kHz   | X    | X    | 451 kHz |

X = Diode doorknippen.

- Apparaat inschakelen en controleren of de minimale vervorming bij 549 kHz ligt.

(GB) Because, generally speaking, MOS IC's are very sensitive to overload and too high voltages, measurements should be carried out with greatest possible care.  
For further instructions, see the directions enclosed in the separate IC-packages.

(F) Parce qu'en général, les IC MOS sont très sensibles à la surcharge et à des tensions trop élevées, il faudra procéder aux mesures avec le plus grand soin.  
Pour plus de détails, voir les instructions accompagnant l'emballage des IC.

(I) Dato che gli IC MOS sono molto sensibili alla sovraccarica e alle tensioni troppo alte, occorrerà procedere alle misure con particolare cautela.  
Per alti particolari riferirsi alla istruzioni comprese nell'imballaggio di ogni IC.

(N) Fordi, generelt, MOS-IC'er er meget følsomme for overbelastning og for høje spændinger, må målinger udføres med størst mulig forsigtighed.  
For videre forholdsregler, se anvisningene vedlagt i IC-pakningene.

(NL) Omdat MOS IC's in het algemeen zeer gevoelig zijn voor overbelasting en te hoge spanning dient bij het meten de grootst mogelijke zorgvuldigheid in acht genomen te worden. Zie voor verdere instructies de bijsluiters in de verpakking van de IC's.

(D) Da MOS IC's im allgemeinen sehr empfindlich gegen Überbelastung und zu hohe Spannung sind, muss man beim Messen äusserst vorsichtig vorgehen.  
Für weitere Weisungen siehe den beigelegten Zettel in der Verpackung der IC's.

(S) I allmänhet är IC-kretsar AV MOS-typ mycket känsliga för höga spänningar och för överbelastning. Iakttag därför största möjliga försiktighet vid mätningar på dessa kretsar. Se även de anvisningar som bipackas IC-kretsarna.

(DK) Da MOS-IC'er er meget følsomme overfor høje spændinger og andre former for overbelastning, skal håndteringen af disse ske med størst mulig forsigtighed. Se instruktionen som er ilagt IC-emballagen.

(SF) Koska yleisesti ottaen MOS-mikropiirit ovat arkoja ylikuormituksen ja liian suurien jännitteiden suhteen, on mittaukset suoritettava suurella varovaisuudella. Lisäohjeet ovat kyseisen integroidun piirin pakkauksessa.
