**COMPACT MUSIC SYSTEM**

**DC-X303Z(BK)**

**MODEL DC-X303Z(BK) COMES IN SEVEN VERSIONS DISTINGUISHED AS FOLLOWS:**

| Type | Power requirement                     | Destination        |
|------|---------------------------------------|--------------------|
| KU   | AC120V only                           | U.S.A              |
| HE   | AC220V, 240V (Switchable)             | European continent |
| HEZ  | AC220V, 240V (Switchable)             | West Germany       |
| HB   | AC220V, 240V (Switchable)             | United Kingdom     |
| S    | AC110V, 120V, 220V, 240V (Switchable) | General market     |
| YP   | AC240V only                           | Australia          |
| KC   | AC120V only                           | Canada             |

- This service manual is applicable to the HE, HB and S types.
- As to the HB, S types, please refer to pages 94.
- As to the KC and YP types, please refer to the additional service manual (ARP1088-0).
- As to the HEZ type please refer to the additional service manual (ARP1087-0).
- As to the KU type, please refer to the additional service manual (ARP1081-0).
- Ce manuel d'instruction se réfère au mode de réglage en français (P78-P82).
- Este manual de servicio trata del método ajuste escrito en español (P83-P87).

# 1. SPECIFICATIONS

## Amplifier Section

### Continuous Power Output

40 to 20,000 Hz ..... 50 W + 50 W (T.H.D. 0.5% 8 ohms)  
 1 kHz (DIN) ..... 32 W + 32 W (T.H.D. 1% 8 ohms)

1 kHz (DIN music power) ..... 45 W + 45 W (T.H.D. 1% 8 ohms)

### Hum and Noise (IHF, short-circuited, A network)

PHONO ..... 72 dB  
 MIC ..... 50 dB  
 CD, VDP/VIDEO ..... 80 dB

Graphic equalizer frequency band .....  
 100 Hz, 330 Hz, 1kHz, 3.3 kHz 10 kHz, ±8 dB

Hum and Noise (DIN continuous Power/50 mV)  
 PHONO ..... 68 dB/60 dB

Total Harmonic Distortion (40 Hz to 20,000 Hz, 8 ohms), from CD  
 16 Watts per channel power output ..... No more than 0.3%

## Tape Deck Section

Systems ..... 4 track, 2-channel stereo  
 Heads ..... "Hard Permalloy" recording/playback head x 1

"Hard Permalloy" playback head x 1  
 "Ferrite" erasing head x 1

Motor ..... DC servo capstan motor x 2  
 DC reel motor x 2

Wow and Flutter ..... No more than 0.06% (WRMS)  
 No more than ±0.16% (DIN)

Fast Winding Time ..... Approximately 80 seconds (C-60 tape)

### Frequency Response

-20 dB recording:  
 Normal tape ..... 35 to 14,000 Hz  
 Chrome tape ..... 35 to 15,000 Hz  
 Metal tape ..... 35 to 16,000 Hz

### Signal-to-Noise Ratio

Dolby NR OFF ..... More than 56 dB

### Noise Reduction Effect

Dolby NR B type ON ..... More than 10 dB (at 5 kHz)  
 Dolby NR C type ON ..... More than 18 dB (at 5 kHz)

## Furnished Parts

Remote control unit ..... 1  
 Dry batteries, size "AAA" (IEC R03 1.5 V, UM-4) ..... 2  
 Operating Instructions ..... 1

## Miscellaneous

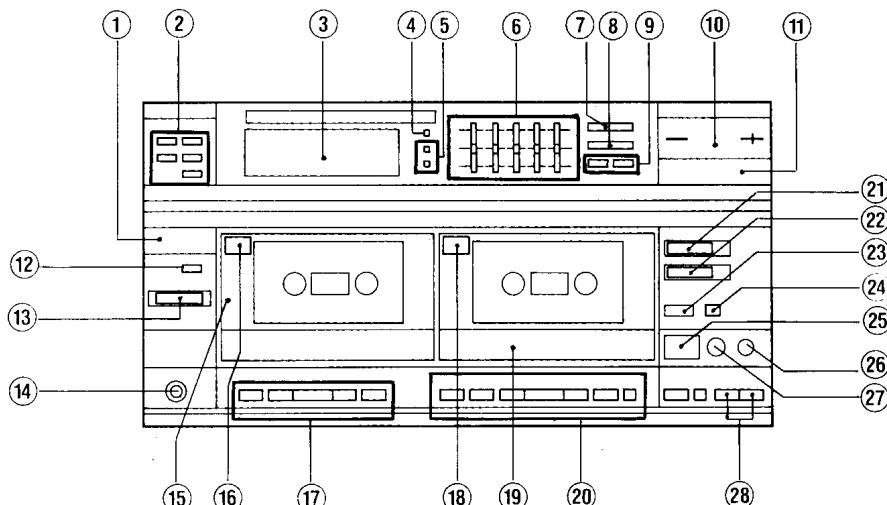

### Power requirements

European model ..... AC 220 V, 50/60Hz  
 U.K. model ..... AC 240 V, 50/60 Hz

Power Consumption ..... 250 W

Dimensions ..... 447(W) x 269(H) x 413(D) mm  
 17-11/16(W) x 10-5/8(H) x 16-5/16(D) in  
 Weight (without package) ..... 8.5 kg (18 lb 12 oz)

# 2. FRONT PANEL FACILITIES

## [Amplifier section]

### ① POWER STAND-BY/ON switch

By pressing this switch ON, the POWER indicator will light, and power will be supplied to the main circuit of the deck amplifier.

By pressing this switch once again, the amplifier will go into the standby mode.

### ② TIMER SET switches

- |               |   |
|---------------|---|
| START TIME:   | Used to set the start time of the timer.                        |
| STOP TIME:    | Used to set the stop time of the timer.                         |
| - (minus):    | Used to reduce the numerical value when setting the time.       |
| + (plus):     | Used to increase the numerical value when setting the time.     |
| CLOCK ADJUST: | Used to adjust the time.  |
| SET/NEXT:     | Used to set the time or timer or to move to the next operation. |

**(3) Central display**

This indicates the main operating modes (functions, time, volume, balance, etc.).

**(4) POWER indicator**

This lights up when the power is switched on.

**(5) SOUND EFFECT indicators**

- |                   |  |
|-------------------|--|
| STEREO WIDE:      | Used to add a stereo wide effect to the stereo sound source such as music.                               |
| SIMULATED STEREO: | Used to add a simulated stereo effect to a monaural sound source with ordinary radio and other programs. |

**NOTE:**

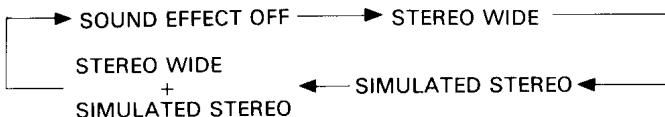

*In the case of a monaural source, a STEREO WIDE effect cannot be obtained. In such a case, operate the SOUND EFFECT switch so that both the STEREO WIDE and SIMULATED STEREO indicators light.*

**(6) 5-BAND GRAPHIC EQUALIZER**

This allows the sound quality to be varied.

**(7) SOUND EFFECT switch**

Every time this is pressed, the sound modes are selected alternately as follows:

**(8) MUTING switch**

This temporarily cancels out the sound.

**(9) BALANCE switches**

- L: Used to reduce the sound from the right speaker.
- R: Used to reduce the sound from the left speaker.
- L/R: When both switches are pressed, the sound is instantly returned to its normal (center) setting.

**(10) VOLUME control switch**

- Push the “-” or “+” switch to control the volume.
- + : Used to increase the volume.
- : Used to reduce the volume.

**(11) FUNCTION switch**

This is used to select the sound source which is to be delivered through the speakers or the source which is to be recorded. Every time it is pressed, the functions are selected successively as follows:

- TAPE: Used to listen to tapes.
- CD: Used to listen to compact discs.
- VIDEO: Used to listen to a video component (LaserVision player or hi-fi VCR) connected to the rear panel VDP/VIDEO jacks.
- TUNER: Used to listen to radio broadcasts.
- PHONO: Used to listen to records on a turntable.

**(12) TIMER STAND-BY switch**

Press this when using the built-in timer for unattended recording or wake-up playback.

**(13) TIMER STAND-BY MODE selector switch**

- TAPE PLAY: Used for wake-up playback.
- TAPE REC: Used for unattended recording.
- TUNER: Used when waking up to radio broadcasts instead of an alarm clock.

**(14) PHONES jack**

This is a stereo mini jack for connecting the headphones.

**(15) Cassette door I****(16) EJECT (deck I)**

Push the [ A ] mark to open the cassette door.

**(17) PLAYBACK function switches (deck I)**

- ◀◀ (FAST): This switch is used for rewinding when the unit is in the forward mode; for fast forwarding a tape in the reverse mode.
- ◀ (PLAY): For playing back a tape in the reverse mode.
- (STOP): For stopping the tape run.
- ▶ (PLAY): For playing back a tape in the forward mode.
- ▶▶ (FAST): This switch is used for fast forwarding when the unit is in the forward mode; for rewinding a tape in the reverse mode.

**(18) EJECT (deck II)**

Push the [ A ] mark to open the cassette door.

**(19) Cassette door II****(20) REC/PLAYBACK function switches (deck II)**

- REC (RECORD): For recording material onto a tape.
- ◀◀ (FAST): For rewinding a tape in the forward mode; for fast forwarding a tape in the reverse mode.
- ◀ (PLAY): For playing back a tape in the reverse mode.
- (STOP): For stopping the tape run.
- ▶ (PLAY): For playing back a tape in the forward mode.
- ▶▶ (FAST): For fast forwarding a tape in the forward mode; for rewinding a tape in the reverse mode.
- SYNCHRO PHONO/CD: This switch is used to put the unit into the “synchro-chronized recording” mode in which recording starts as soon as a turntable or CD player is started.
- PAUSE: For temporarily stopping the tape run.
- REC MUTE: For creating the blanks of the appropriate length between tape programs or for cutting out unnecessary parts of a program being recorded.

**NOTE:**

*The SYNCHRO function can be used only with PIONEER components which have a CONTROL IN jack.*

**(21) REVERSE MODE switch**

| Switch position | During playback       | During recording       |
|-----------------|-----------------------|------------------------|
| RELAY I▶II      | deck I → deck II      |                        |
| —               | Single-sided playback | Single-sided recording |
| —               | Double-sided playback | Double-sided recording |
| —               | Continuous playback   | Double-sided recording |

**(22) DOLBY NR\* switch**

The DOLBY NR switch can be set to Dolby B NR, Dolby C NR, or Dolby NR OFF. (Normally set it to Dolby NR OFF.)

The Dolby NR B system serves to reduce noise in the treble range, it cuts tape hiss and expands the dynamic range. The Dolby NR C system is even more effective than the B in reducing noise as it cuts the noise from the mid-range on.

- If material has been recorded using the Dolby NR system, make sure that it is played back using the same system. Playing back a tape, which was recorded with the Dolby NR system, at the Dolby NR OFF position or playing back a tape, which was recorded at the Dolby NR OFF position or recorded using a different system to the Dolby system will not yield a sound faithful to the original one.
- It is therefore recommended that you make a note of the fact on the tape's label that the recording was made using the Dolby NR system. This will safeguard against its playback in a different switch position.

\*

- ~~~~~
- The Dolby noise reduction system is manufactured based on enforcement rights obtained from the Dolby Laboratories Licensing Corporation.
  - "Dolby" and the "double D" symbol are registered trademarks of the Dolby Laboratories Licensing Corporation.
- ~~~~~

**(23) TAPE COUNTER**

This indicates in 3 digits how far the tape in deck II has run.

**(24) TAPE COUNTER RESET button****(25) Remote control sensor window****(26) MIC MIX control**

This is used to adjust the proportion of the microphone volume and volume of the other sound source for mixing.

**(27) MIC jack**

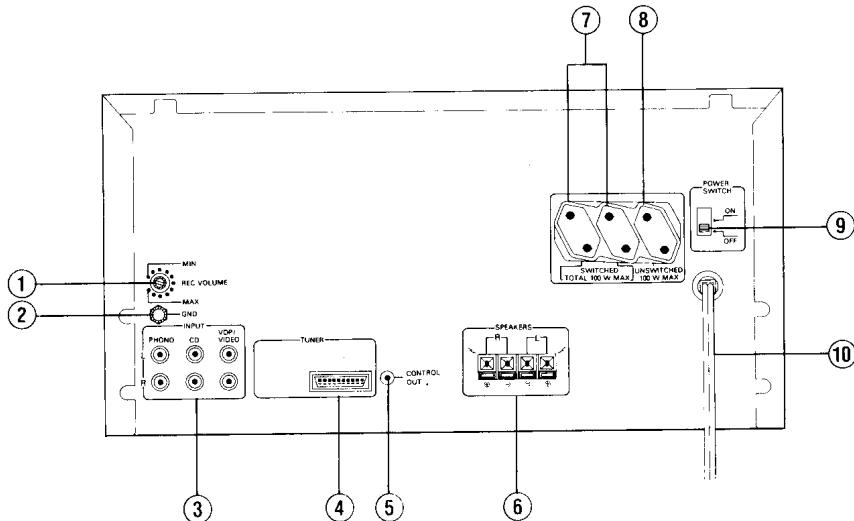

This is a standard jack for connecting the microphone.

**(28) SYNCHRO COPY switches**

**NORMAL SPEED:** Used to copy a tape while listening to the tape's playback (normal-speed copying).

**HIGH SPEED:** Used to copy a tape at approximately double the normal speed (this takes about half the time which is normally required).

### 3. REAR PANEL FACILITIES

#### ① REC VOLUME control

Normally, this is not touched. However, when recording material onto a cassette tape, it is adjusted when the recording level is either too high or too low.

To raise the level, turn the control clockwise (↻).

To lower the level, turn the control counterclockwise ((\$('')).

#### ② Ground terminal (GND)

Connect this to the ground terminal on the turntable.

#### ③ Input jacks

**PHONO:** Connect the output cord on the turntable to these jacks.

**CD:** Connect the output cord on the compact disc player to these jacks.

**VDP/VIDEO:** Connect the audio output cord of the LaserVision player (Video disc player) or hi-fi VCR to these jacks.

#### ④ Tuner jacks

Connect the F-X303ZL FM/AM tuner to the unit using the accessory tuner input/output cord.

#### ⑤ Remote control output jack

Connect this jack to the CONTROL IN jack of a CD player or turntable provided with a PIONEER CONTROL IN jack.

- This jack enables the CU-DC002 remote control unit provided with the deck amplifier to exercise central control over the turntable and CD player.

#### ⑥ Speaker terminals

**L:** Connect the left speaker system as seen from the listening position.

**R:** Connect the right speaker system as seen from the listening position.

#### NOTE:

##### *Speaker impedance:*

*Connect a speaker system having a nominal impedance ranging from 6 ohms to 16 ohms.*

#### ⑦ AC OUTLETS (SWITCHED)

Power supplied through these outlets is turned on and off by the deck amplifier's POWER switch. Total electrical power consumption of connected equipment should not exceed 100 W.

#### ⑧ AC OUTLET (UNSWITCHED)

Power flows continually to this outlet, regardless of whether the deck amplifier is switched ON or OFF. Electrical power consumption of the connected equipment should not exceed 100 W.

The equipment should be disconnected by removing the main plug from the wall socket when not in regular use, e.g. when on vacation.

#### ⑨ MAIN POWER SWITCH

##### [ON]

While this unit is in a standby status and the power cord is connected to the wall socket, the circuit of the unit will operate continuously. When not using the unit for a long period, either switch the unit OFF, or remove the power cord from the power socket.

##### [OFF]

When the switch is OFF, the power to the unit will be cut off.

#### ⑩ Power cord

Connect this to the AC wall socket.

## 4. DISASSEMBLY

### ■ Removal of Bonnet Case

1. Remove 7 screws ①
2. Remove the bonnet case.

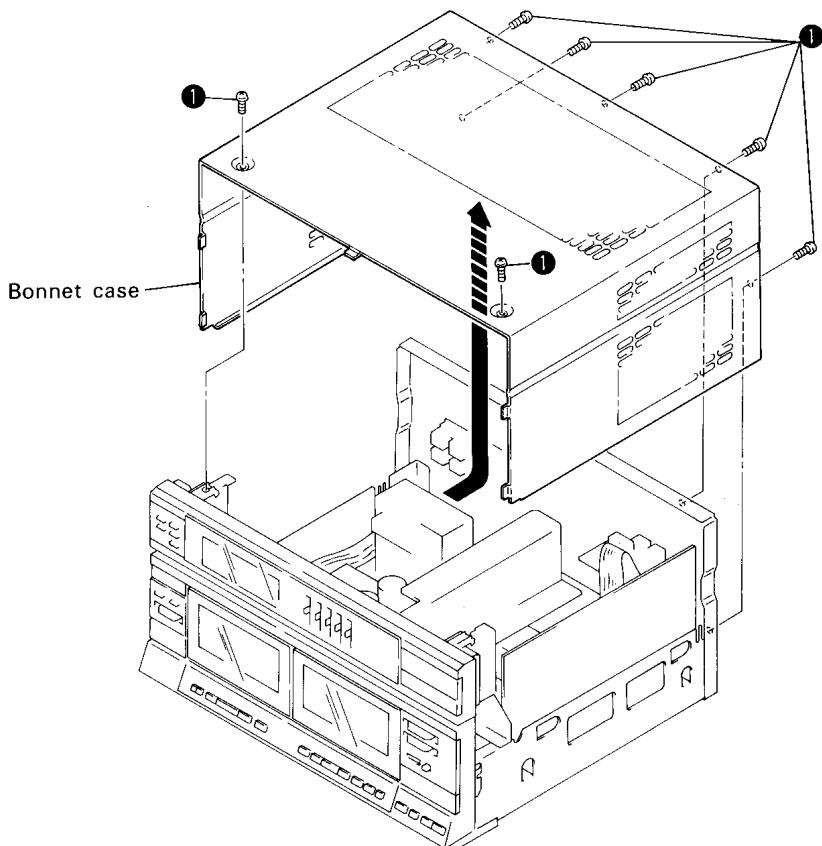

Fig. 4-1 Removal of bonnet case

### ■ Removal of Front Panel Assembly

1. Remove 2 connectors namely, connectors 9P and 8P, and 6 connectors namely, 3P, 6P, 6P, 9P, 9P and 9P from the complex assembly (Fig. 4-2-1)
2. Remove 2 screws ① and the belt. Apply that belt to the claw.
3. Disengage the 2 positions of claws. (Fig. 4-2-1)
4. Disengage the 3 positions of claws. (Fig. 4-2-2)
5. Remove the front panel from the chassis.

Note: If the door is opened, the front panel assembly cannot be removed.

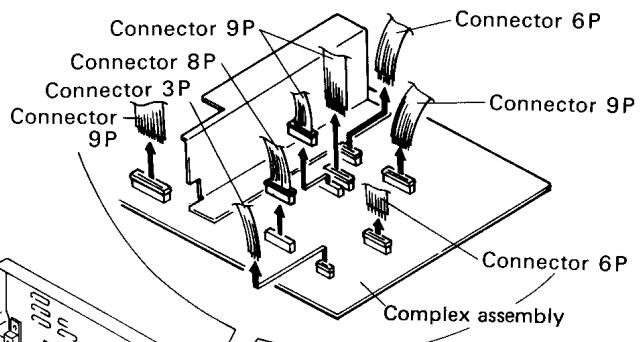

Fig. 4-2-1

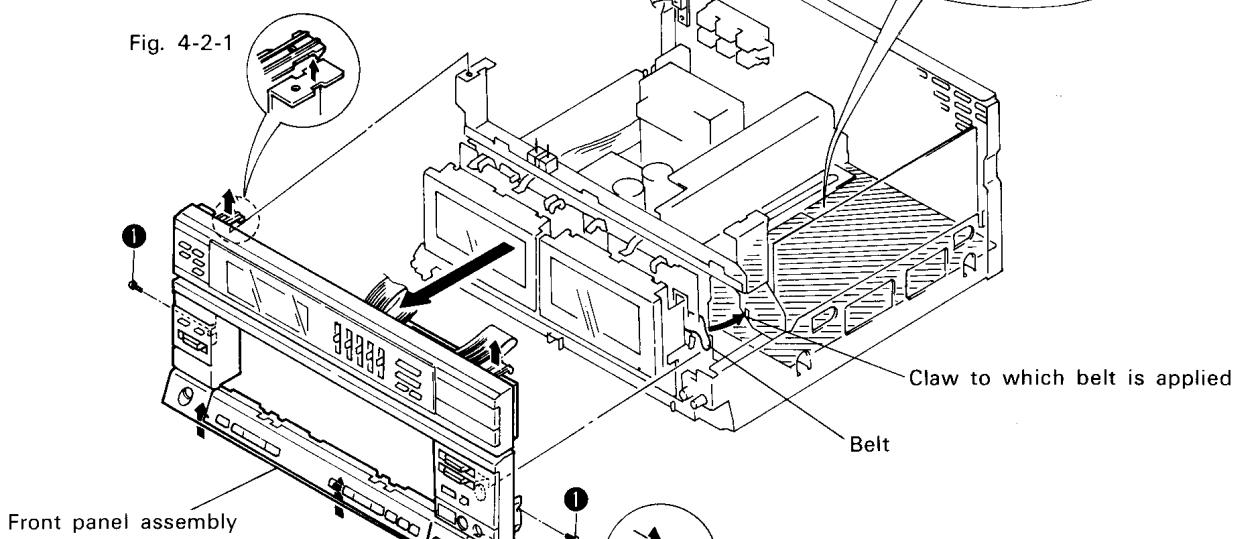

Fig. 4-2-2

## ■ Removal of Display Assembly, GE, E-VR Assembly, Timer SW assembly, Tact SW Assembly, REV Mode SW Assembly, and Receive Assembly

1. Remove 3 slide knobs.
2. Remove 3 positions of PCB holders (Fig. 4-3-1) and remove the E-VR section of the GE, E-VR assembly.
3. Remove 9 screws ① and connector 10P from the timer SW, and remove the display assembly.

4. Remove the timer SW assembly.
5. Remove 4 positions of claws (Fig. 4-3-2), and remove GE section of the GE, E-VR assembly.
6. Remove 6 screws ② and remove the tact SW assembly.
7. Remove a screw ③ and remove the REV mode assembly.
8. Disengage 2 positions of claws (Fig. 4-3-3) and remove the receive assembly.

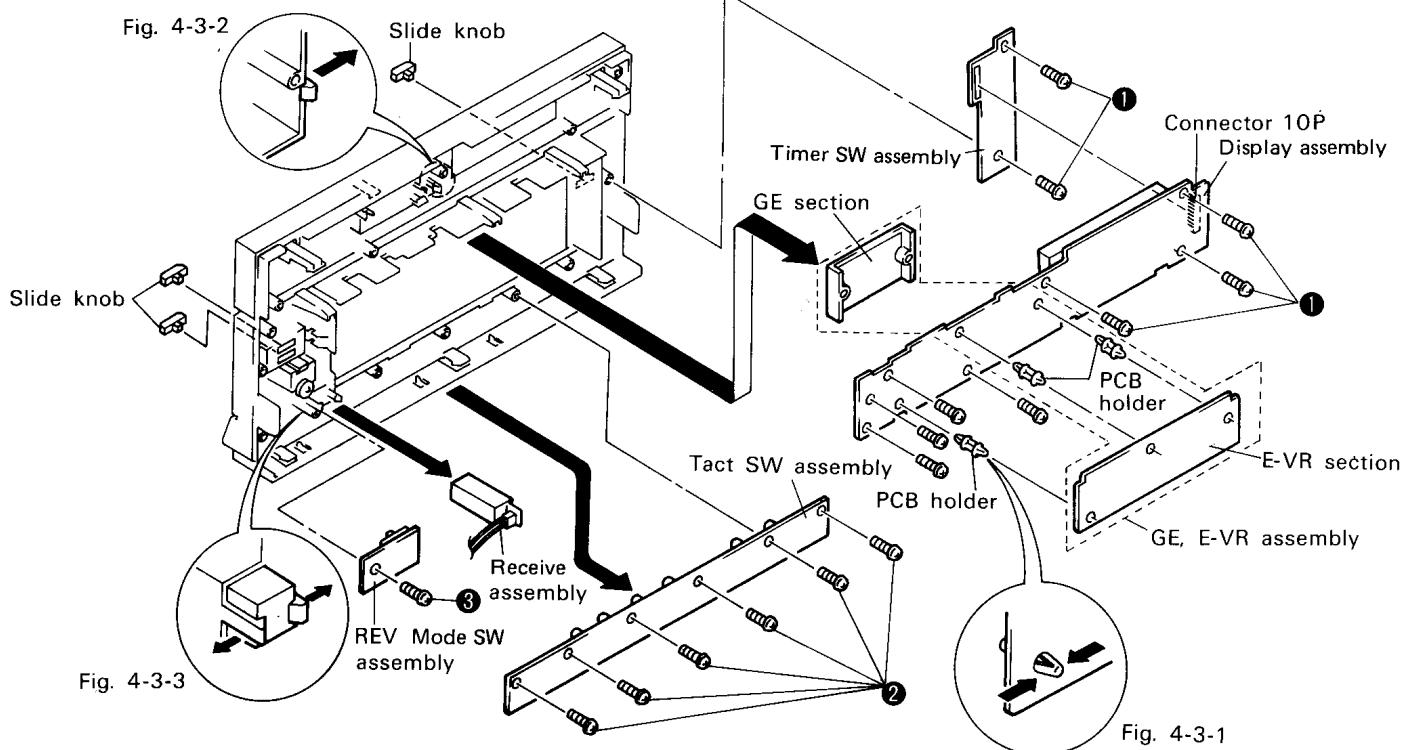

Fig. 4-3 Removal of individual sections of assembly

## ■ Removal of Cassette Mechanism Unit

1. Open the binder and remove the cord.
2. Remove 7 screws ① and remove the panel stay.
3. Remove 2 screws ② .
4. Remove 2 screws ③ .
5. Remove 6 connectors; namely, 3P, 8P, 4P, 6P, 8P and 8P.
6. Remove the cassette mechanism unit from the chassis.

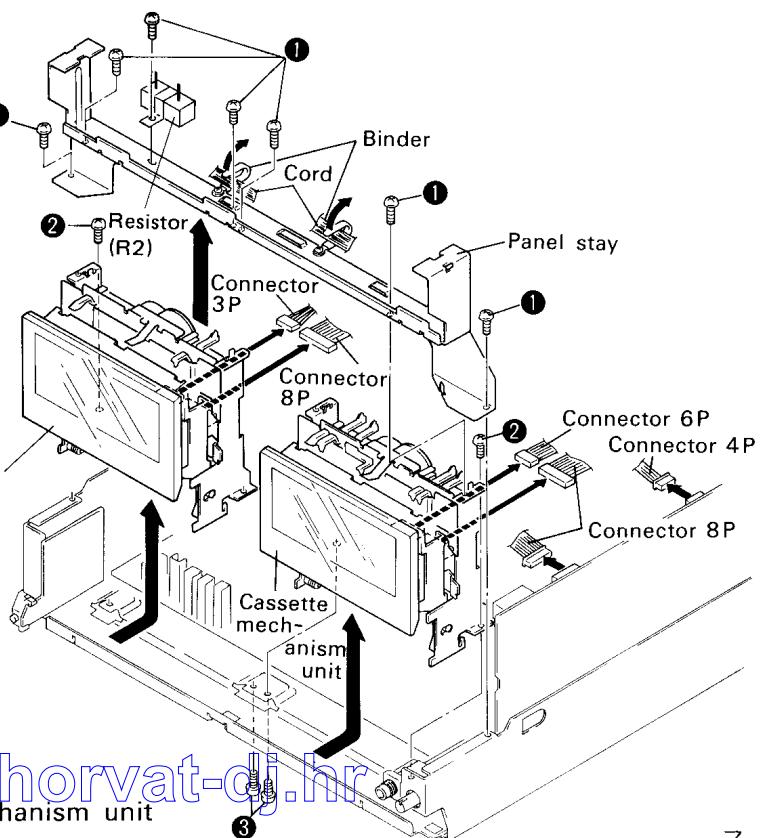

Fig. 4-4 Removal of cassette mechanism unit

**■ Removal of Tape Assembly, Dolby Assembly, MIC AMP Assembly, Phones Assembly, Complex Assembly, and Power Transformer**

1. Remove 3 nylon rivets of the tape assembly.
2. Remove 2 connectors of 12P and remove the tape assembly from the complex assembly.
3. Remove a connector of 6P and a connector of 9P, and remove the dolby assembly from the tape assembly.
4. Remove a connector of 5P from the complex assembly.

5. Remove the mounting plate and remove the MIC AMP assembly.
6. Remove a screw ① and remove the phones assembly.
7. Remove 4 screws ②, 2 screws ⑤ and 2 screws ⑥.
8. Remove 4 screws ③.
9. Remove the complex assembly from the chassis.
10. Remove 4 screws ④ and remove the power transformer.

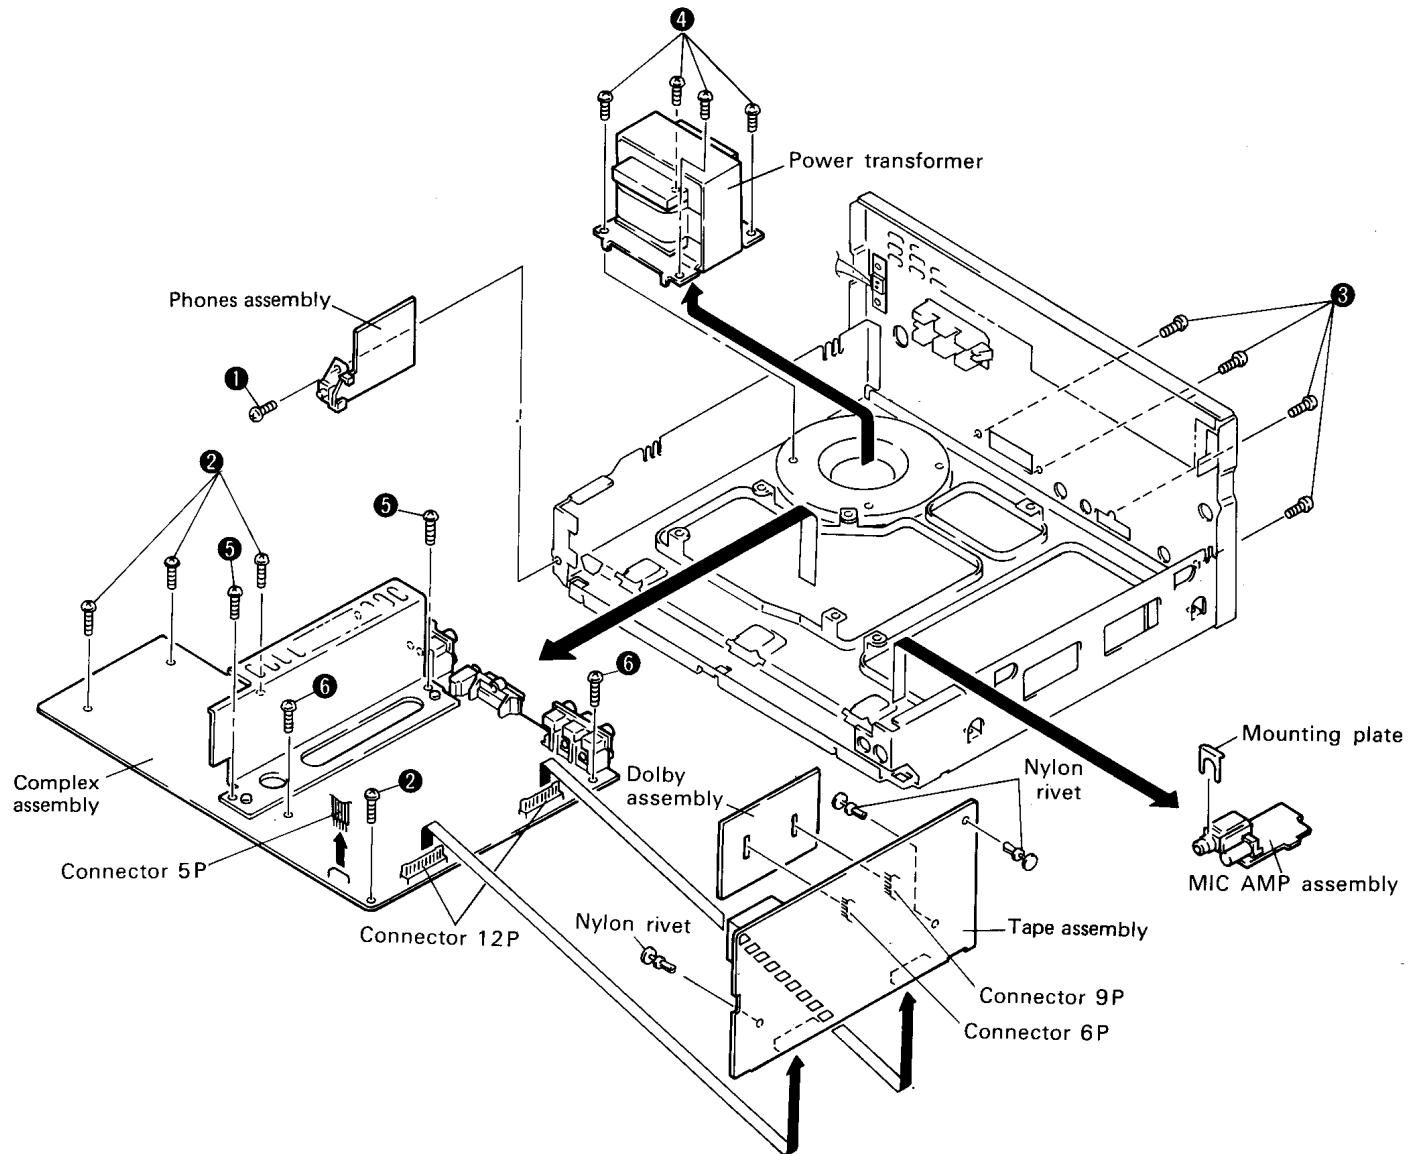

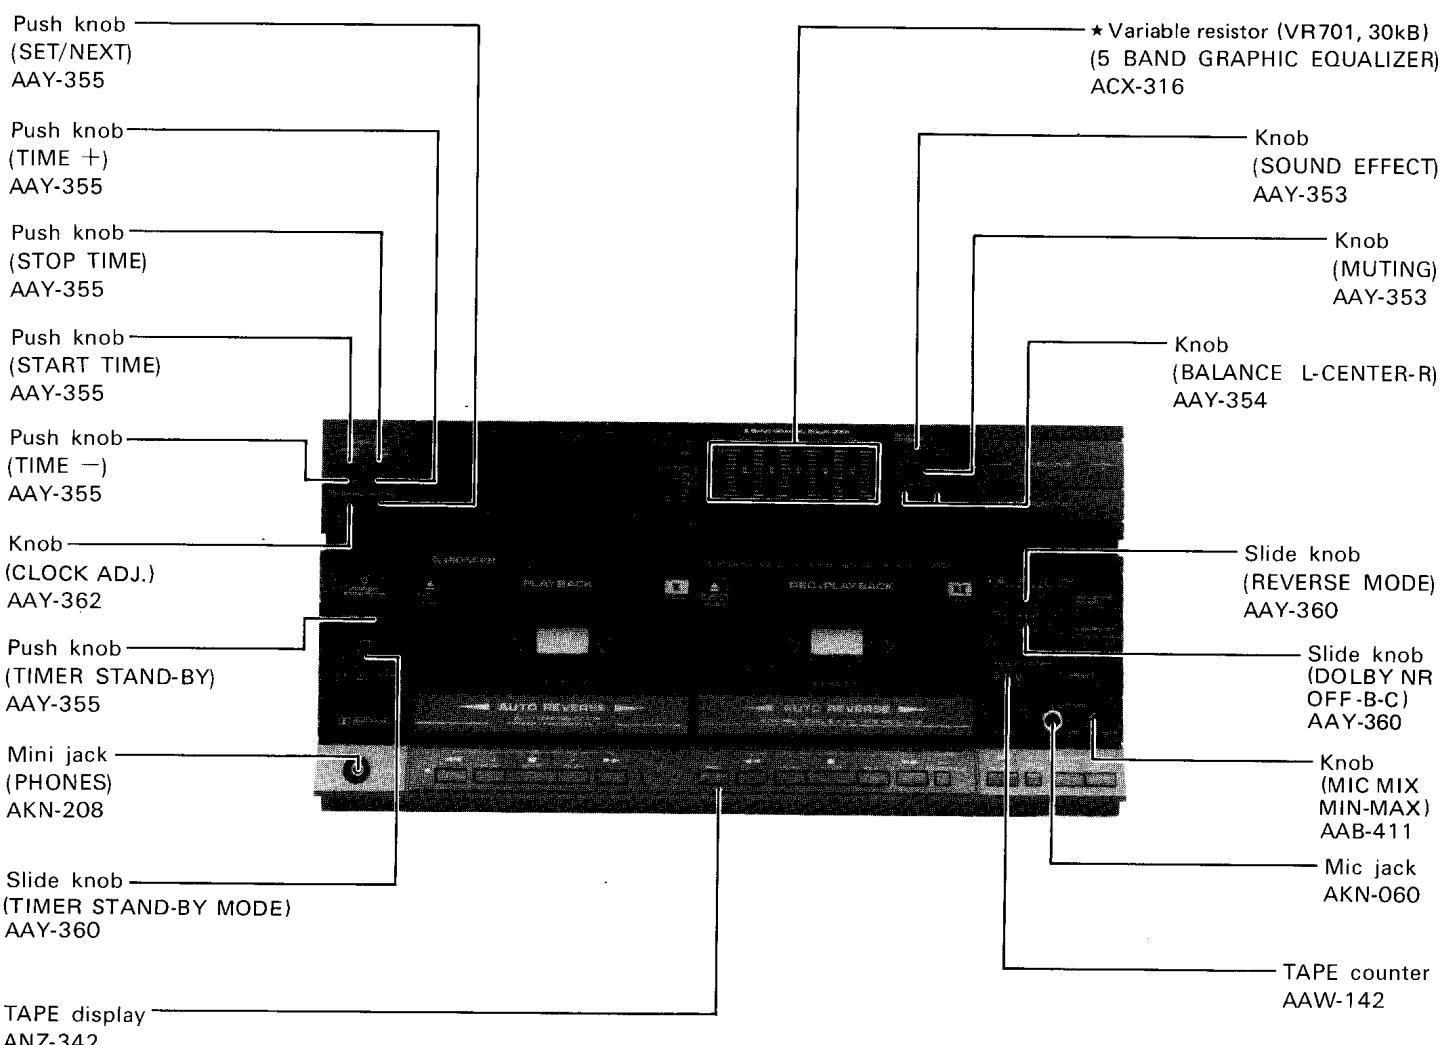

Fig. 4-5 Removal of individual assemblies and power transformer

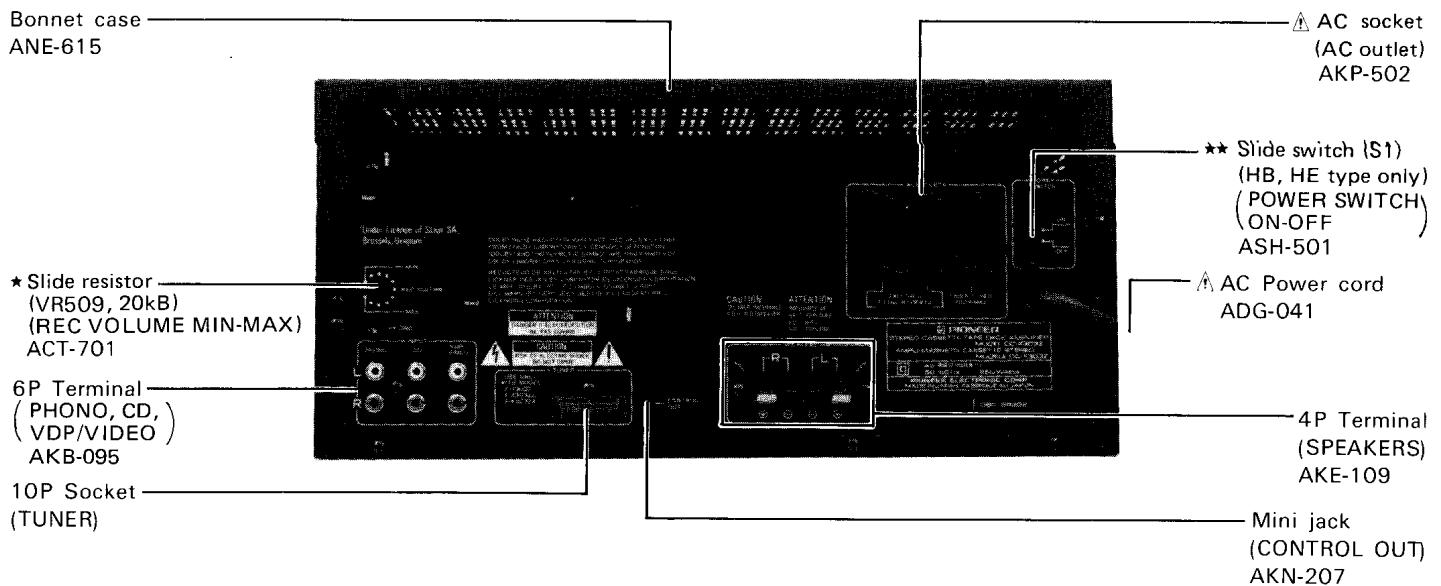

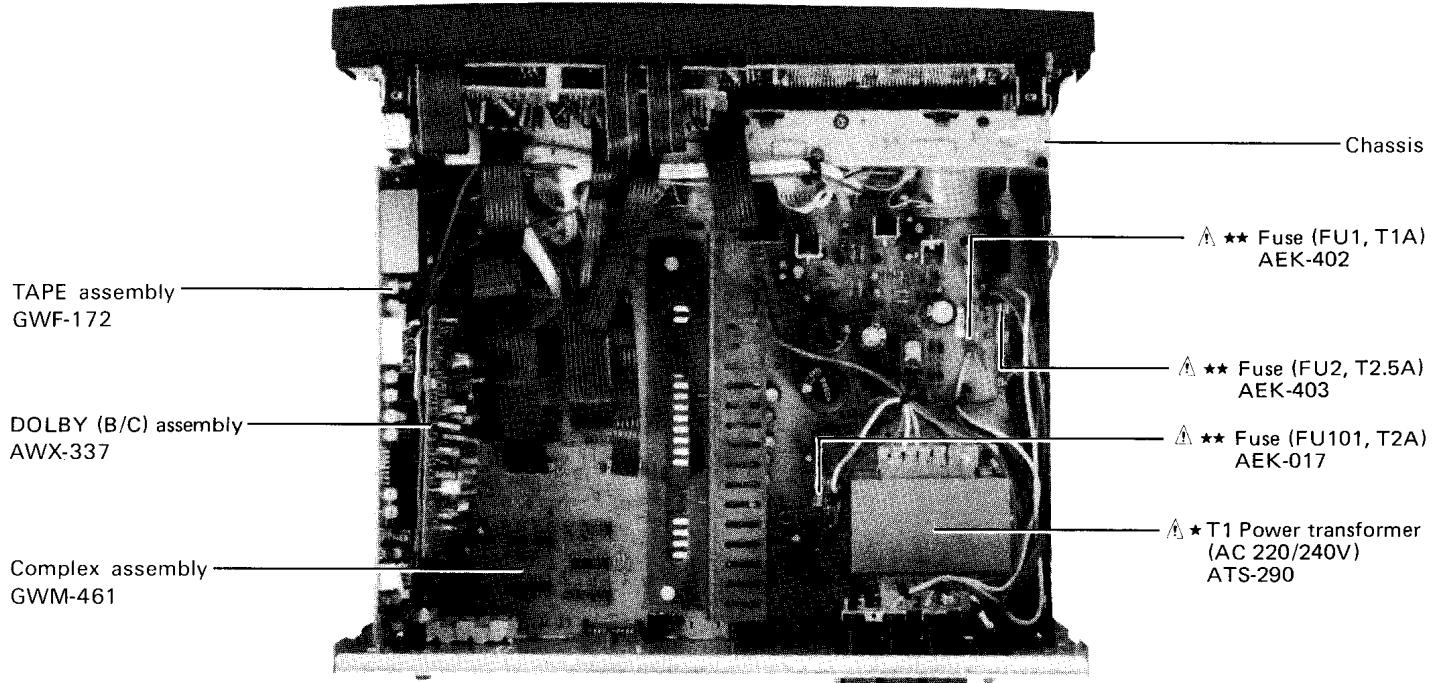

## 5. PARTS LOCATION

### NOTES:

- The **A** mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your Parts Stock Control, the fast moving items are indicated with the marks **★★** and **★**.
- ★★ GENERALLY MOVES FASTER THAN ★**  
This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.
- Parts marked by “**◎**” are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

## TIMER SW ASSEMBLY

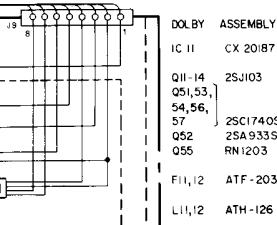

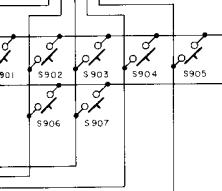

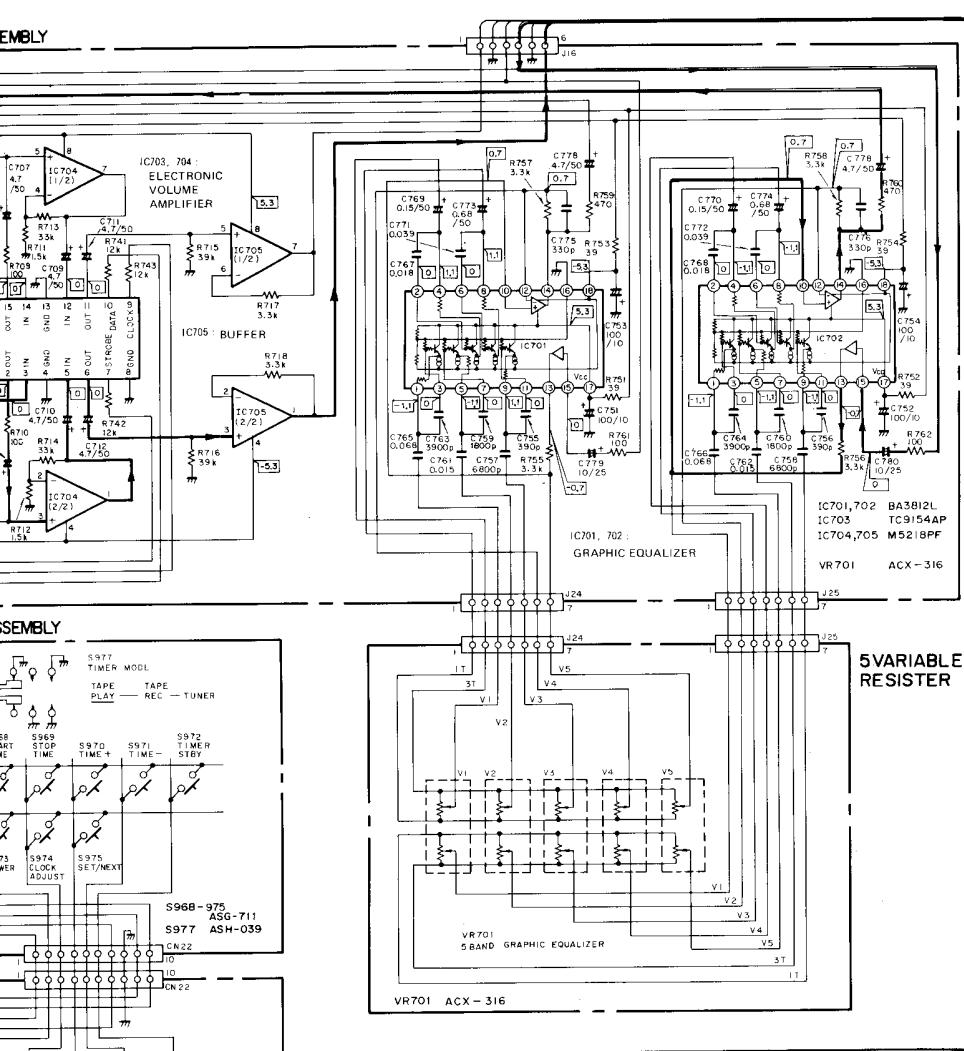

MECHANISM UNIT I

**NOTE:**  
The indicated values are only. Other values are listed.

EMBLY

ASSEMBLY

MECHANISM  
UNIT I

## 1. RESISTORS

Indicated in  $\Omega$ , 1/4W, 1/6W and 1/8W, +5% tolerance unless otherwise noted; k: k $\Omega$ ; M: M $\Omega$ ; (F): +1%; (G): +2%; (K): +10%; (M): +20% tolerance.

## 2. CAPACITORS

Indicated in capacity ( $\mu$ F/voltage (V) unless otherwise noted; p: pF). Indication without voltage is 50V except electrolytic capacitor.

## 3. VOLTAGE, CURRENT

DC voltage (V) at no input signal Value in ( ) is DC voltage at rated power.

mA: DC current at no input signal

## 4. OTHERS

Signal route.  
Adjusting point.The  $\triangle$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing be sure to use parts of identical designation. $\times$  marked capacitors and resistors have parts numbers.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.

## 9. ELECTRICAL PARTS LIST

### NOTES:

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

**Ex. 1** When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

|      |                  |   |
|------|------------------|---|
| 560Ω | $56 \times 10^1$ | 561 . . . . . RD $\frac{1}{2}$ PS 561 J |
| 47kΩ | $47 \times 10^3$ | 473 . . . . . RD $\frac{1}{2}$ PS 473 J |
| 0.5Ω | 0R5 . . . . .    | RN2H 0R5 K                              |
| 1Ω   | 010 . . . . .    | RS1P 010 K                              |

**Ex. 2** When there are 3 effective digits (such as in high precision metal film resistors).

|        |                   |   |
|--------|-------------------|---|
| 5.62kΩ | $562 \times 10^1$ | 5621 . . . . . RN $\frac{1}{2}$ SR 5621 F |
|--------|-------------------|---|

- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your Parts Stock Control, the fast moving items are indicated with the marks ★★ and ★.

★★ GENERALLY MOVES FASTER THAN ★

This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

- Parts marked by “◎” are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

### • Stop Mode

The cam drive system as seen from behind is outlined in Fig. 10-3. The cam gear is stopped when no. 1 cam gear stopper is engaged with the play arm pin (the position shown in the diagram).

- (1) No. 3 cam is in the position indicated in the diagram with the head base and pinch rollers (FWD, REV) dropped down.
- (2) The slide plate is shifted over to the left (the position shown in the diagram) with the revolving head set in the FWD direction.
- (3) No. 4 cam is in the position shown in the diagram, and the two prongs of the hold lever (brake) are disengaged from the reel drive gears which are thus left free to rotate in either direction.

### • Change from Stop Mode to FWD Playback Mode

- (1) When the FWD PLAY button is pressed, current is passed to the capstan motor and the solenoid which is activated (current applied for 60ms) to turn the play arm counter clockwise.

- (2) Since the play arm is thus disengaged from the no. 1 cam gear stopper, the cam gear is forced counter clockwise by the hold lever to engage and consequently be driven by the capstan gear.
- (3) As a result of the rotational movement of the play arm and cam gear, the slide plate pin moves along route no. 1 (.....>).
- (4) Cam gear rotation also results in no. 3 cam pushing the head base drive claw upwards.
- (5) When the cam gear has been rotated by about  $235^\circ$ , no. 2 stopper on the cam gear meets the play arm pin and is subsequently stopped with the deck now in forward playback mode (see Fig. 10-4). In this condition,
  - (a) The FWD pinch roller is lifted together with the head base, and is pressed against the capstan. The REV pinch roller, on the other hand, is kept in position by the slide base.
  - (b) The brake is released by no. 4 cam.

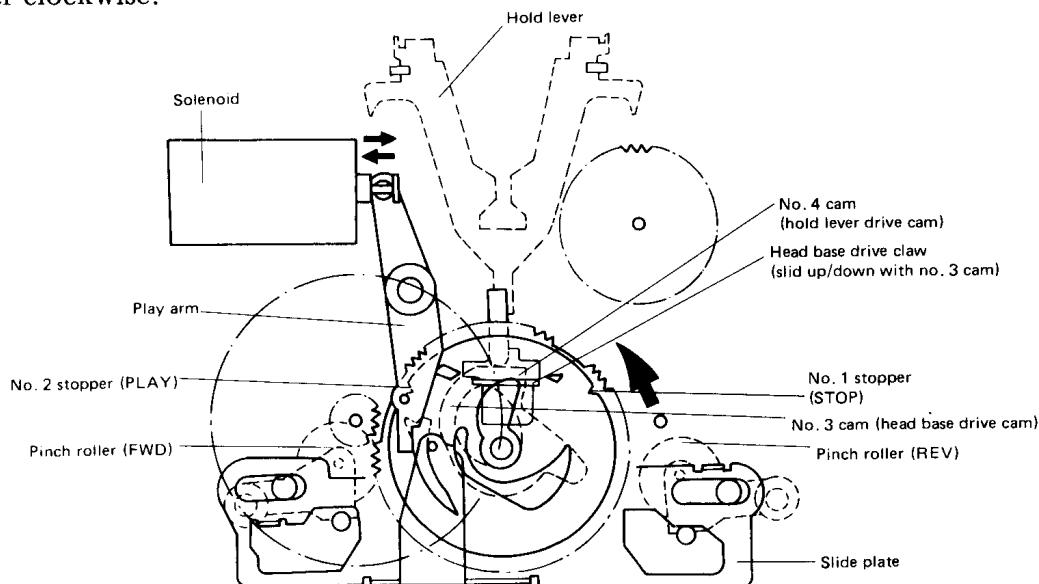

Fig. 10-4 Change from stop to forward playback mode

### • Change from Stop Mode to REV Playback Mode

- (1) When the REV PLAY button is pressed, current is passed to the capstan motor and the solenoid which is activated (current applied for 320ms) to turn the play arm counter clockwise.
- (2) Since the play arm is thus disengaged from the no. 1 cam gear stopper, the cam gear is forced counter clockwise by the hold lever to engage and consequently be driven by the capstan gear.
- (3) As a result of the rotational movement of the play arm and cam gear, the slide plate pin moves along route no. 2 (.....>).
- (4) The slide plate is shifted over to the right

by cam gear no. 2 cam (a), and the revolving head is switched around to the REV direction.

- (5) Cam gear rotation also results in no. 3 cam pushing the head base drive claw upwards.
- (6) When the cam gear has been rotated by about  $235^\circ$ , no. 2 stopper on the cam gear meets the play arm pin and is subsequently stopped with the deck now in reverse playback mode. In this condition,
  - (a) The REV pinch roller is lifted together with the head base, and is pressed against the capstan. The FWD pinch roller, on the other hand, is kept in position by the slide base.
  - (b) The brake is released by no. 4 cam.

- Change from FWD/REV Playback Mode to Music Search (Cue/Review) Mode

- (1) When the FF or REW key is pressed during forward or reverse playback mode, the solenoid is activated (current applied continuously during music search mode) and the play arm pin is disengaged from no. 2 cam gear stopper. The cam gear is thus forced counter clockwise by the head base.
- (2) The cam gear rotation results in the head base being lowered to the MS position no. 3 cam.
- (3) After the cam gear is rotated through

about 20° no. 3 cam gear stopper meets play arm pin, thereby stopping the cam gear to put the deck into music search mode (see Fig. 10-5). In this condition,

- (a) The pinch roller is lowered together with the head base away from the capstan.
- (b) The brake is released by no. 4 cam.
- (4) High speed rotation of the reel motor in the forward or reverse direction is commenced approximately 60ms after the solenoid is activated, and as a result of lateral oscillating action of the F/R gear the reel drive gear (FWD or REV) is engaged to commence take-up of the tape.

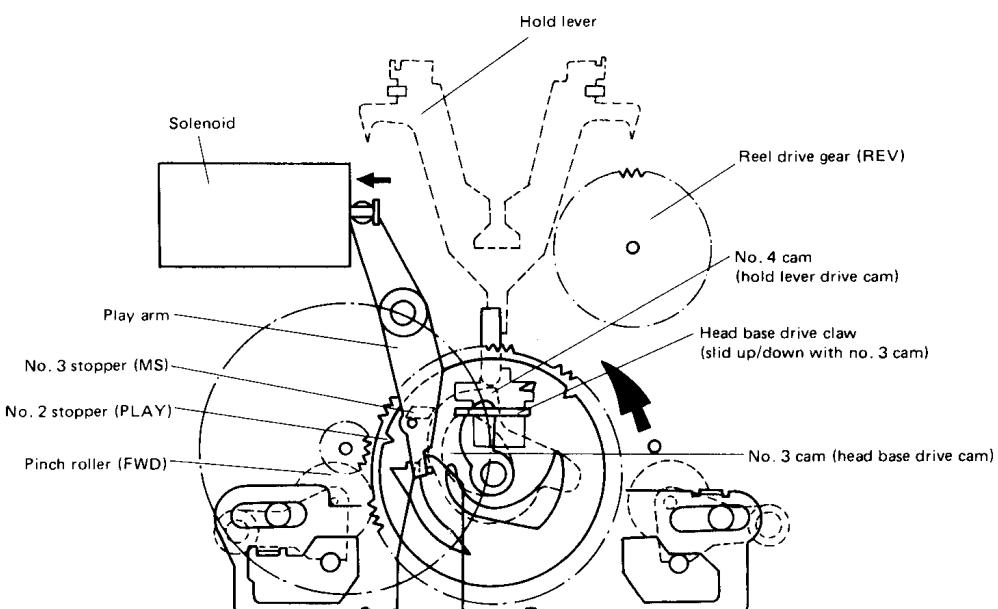

Fig. 10-5 Change from forward playback to music search mode

- Change from (FWD Playback) Music Search Mode to Stop Mode

- (1) If the STOP key is pressed when changing from forward playback to music search mode, the solenoid is deactivated and the play arm pin is disengaged from no. 3 cam gear stopper, resulting in the cam gear being forced counter clockwise by the head base.
- (2) Since the hold lever is released from no. 4 cam when the cam gear is rotated, the hold lever is dropped suddenly resulting in the two hold lever prongs engaging the reel drive gear (FWD, REV) to apply the brake.

(3) The cam gear rotation also results in the head base and pinch roller being dropped to the STOP position by no. 3 cam.

- (4) After the cam gear has been rotated by about 105°, the play arm pin meets no. 1 stopper bringing the cam gear to a stop and putting the deck into stop mode (see Fig. 10-4). In this condition, the brake is released by no. 4 cam.

- Change from (REV Playback) Music Search Mode to Stop Mode

- (1) If the STOP key is pressed when changing from reverse playback to music search mode, the solenoid is deactivated and the play arm pin is disengaged from no. 3 cam gear stopper, resulting in the cam gear being forced counter clockwise by the head base.
- (2) Since the hold lever is released from no. 4 cam when the cam gear is rotated, the hold lever is dropped suddenly resulting in the two hold lever prongs engaging the reel drive gear (FWD, REV) to apply the brake.
- (3) The cam gear rotation also results in the head base and pinch roller being dropped to the STOP position by no. 3 cam.
- (4) The slide plate is shifted across to the left by no. 2 cam (b) of the cam gear, and the revolving head is reverted to the FWD direction.
- (5) After the cam gear has been rotated by about 105°, the play arm pin meets no. 1 stopper bringing the cam gear to a stop and putting the deck into stop mode (see Fig. 10-3). In this condition, the brake is released by no. 4 cam.

- Change from FWD/REV Playback Mode to Stop Mode

- (1) When the STOP key is pressed during forward or reverse playback mode, the solenoid is activated (current passed for 60ms) and the play arm pin is disengaged from no. 2 cam gear stopper. As a result, the cam gear is forced counter clockwise by the head base.
- (2) As a result of the cam gear rotation, the deck is switched temporarily to music search mode.
- (3) Operations following activation of the solenoid are the same as described above under "Change from (FWD Playback) Music Search Mode to Stop Mode" and "Change from (REV Playback) Music Search Mode to Stop Mode".

- Pause Mode

Since pause mode is identical in mechanical terms to stop mode, it is not described separately here.

- Revolving Head Switching

- (1) When the slide plate is slid across to the right as indicated in Fig.10-6, the end of the revolving head switching lever is caught by a slit in the switching slide and is shifted across to the right as well. The fan-shape gear is consequently rotated counter clockwise, and the revolving head coupled to this gear is rotated by 180° to set the head in the FWD recording/playback position.
- (2) The slide plate is shifted across to the left to set the head in the reverse recording/playback position.
- (3) A spring is used to set the head into position by snap action and thereby ensure that head is always set in the correct position.

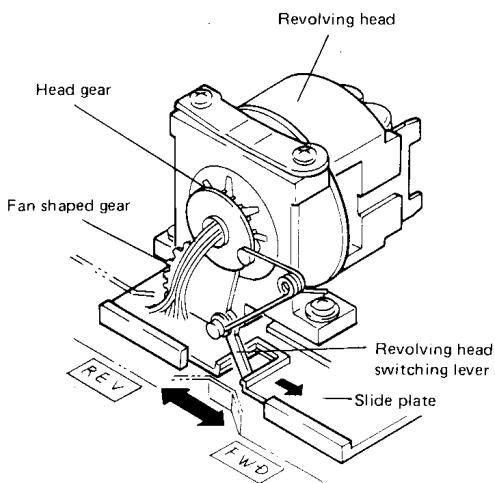

Fig. 10-6 Revolving head switching

## Mechanism I (Playback Mechanism) Mode Table

| MODE |                         | INPUT | STOP               | FF    | REW      | F.PLAY | R.PLAY | Normal Speed dubbing | Double speed dubbing | ASO                | ASO                    | ASO                    | ASO     | ASO                 |

## 12. CIRCUIT DESCRIPTIONS

## 12-1. Pause control

Pause control is a system in which pause is released by twice depressing PAUSE push-button switch.

As long as pin ⑤2 of IC401 stays in "L", if the mechanism moves in the reverse direction, "H" is input into pin ⑥3 of IC401. If the mechanism moves in the forward direction, "H" is input into pin ⑥2 of IC401 and the direction is memoried by the mircocomputer, while pin ⑤2 of IC401 is set to "L" and IC403 is put in the pause

state. If the PAUSE push-button is twice depressed again, depending upon the direction memoried in the microcomputer, either pin 55 or pin 56 is set to "L" and pause is released. Pin 52 of IC401 is normally set to "H" and the stae in which the contact point between A-REC-R and A-REC-F is "H" or "L" is input into pins 62 and 63 or microcomputer IC401.

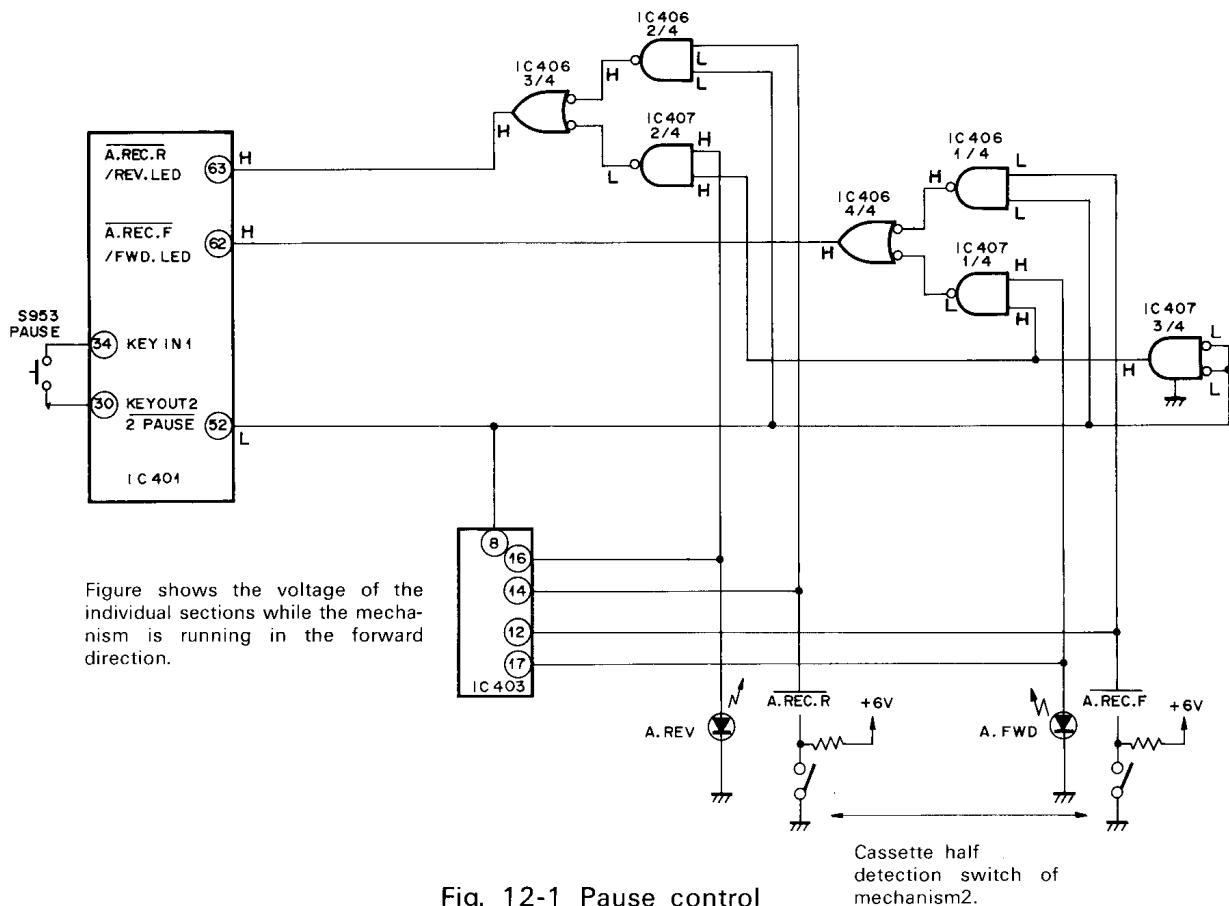

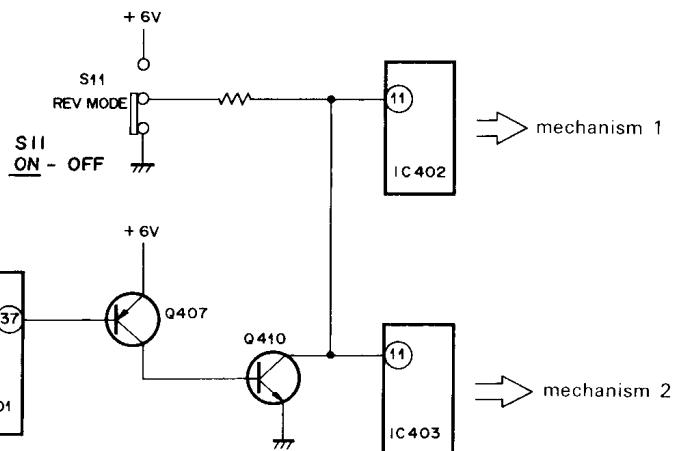

Fig. 12-1 Pause control

## 12-2. Reverse mode control

This circuit acts in such a way that only one-way playback is operated during the program playing, program copying. In the above-cited state, with pin ⑦ of IC401 in "L", if Q407 and Q410 are turned on, pin ⑪ of IC402 and IC403 becomes "L". Consequently, mechanism 1 and mechanism 2 become one-way playback only.

### 12-3. Reset circuit

- When power supply is ON (See Fig. 12-3-1 and Fig. 12-3-2):

Since R401 and C402 time constants charge time is shorter than the time which +6V voltage is raised, D403 is inversely biased. Until C401 and R404 charges are completed, Q402 is kept ON, with Q402 collector in "H".

Consequently, electric potentials are identical at both ends of C403, and pin (2) of IC401 is set to "H". At the completion of electric charge, Q402 is turned

off and R406 discharges C403. Since, here, it is set at  $R406 \ll R407$ , pin (2) of IC401 is set to "L" and microcomputer is reset.

- When on/off cycle is repeated:

With C402 charge completed, R405 discharge causes electric potential at Point A to drop. When the electric potential drops, Q402 is turned ON and the collector voltage becomes 6V so that the electric charge accumulated in C403 is diecharged through D404.

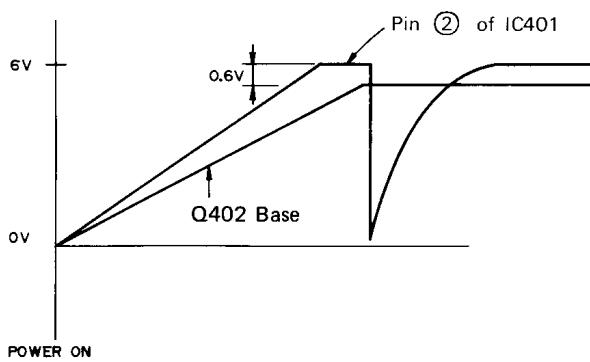

Fig. 12-3-1 Voltage is raised when power supply is ON

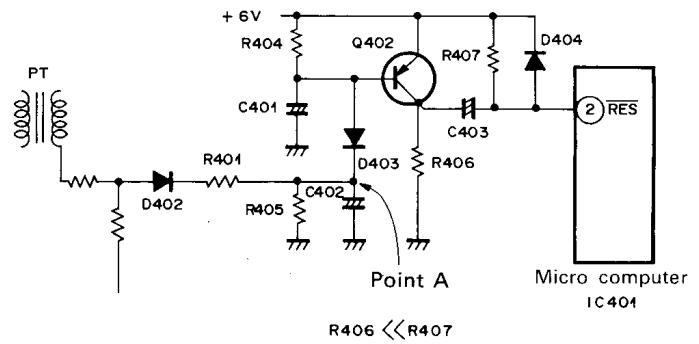

Fig. 12-3-2 Reset circuit

### 12-4. Music search

In the course of program selection, pin (44) of IC401 becomes "H". Input level should be raised by means of IC508 (1/2) and by switching the inter-office time constants every two seconds. If the program selection is not performed, pin (45) of IC401 becomes "H" and Q408 is ON while pin (7) of IC402 and (10) of IC403 are "L".

In the course of music search, Q408 is OFF. When the inter-office has been detected, H pulse is input in to IC402 and IC403 so that mechanism 1 and mechanism 2 are stopped. During the mechanism 2 recording, pin (24) of IC403 becomes "H", Q533 if off, and malfunction is prevented.

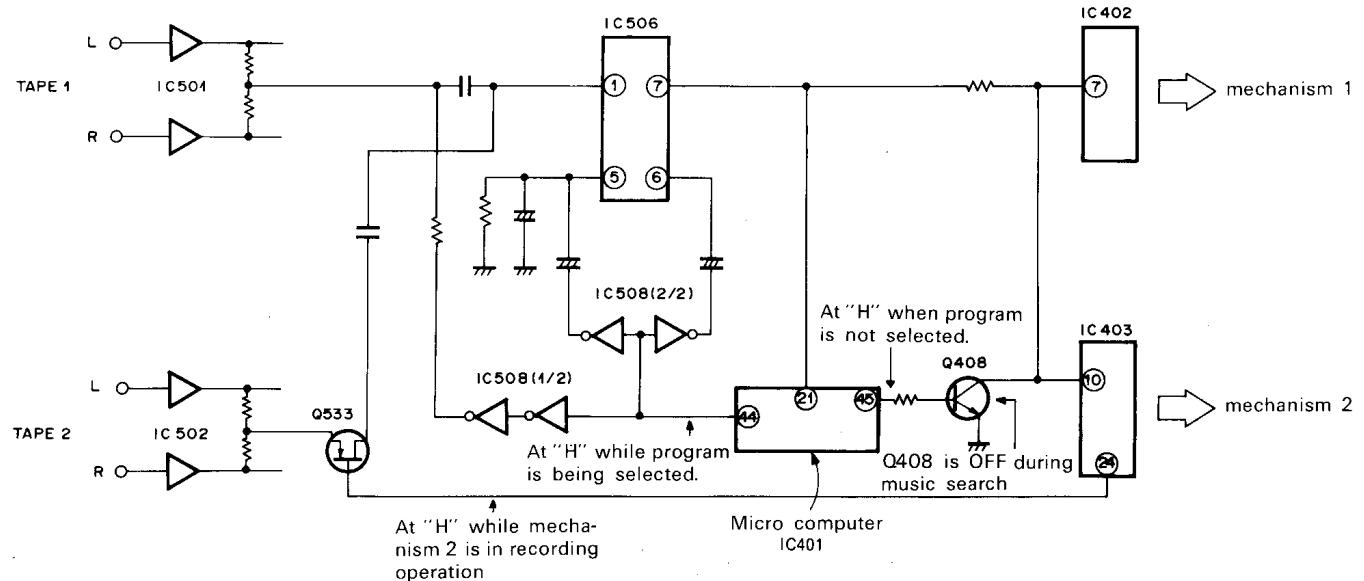

Fig. 12-4 Music serch circuit

## 12-5. Volume

Each pressure on VOLUME UP/DOWN KEY causes ATT to vary by 2 dB. The following illustrates the ATT variation and relationship between ATT value and DISPLAY when the key is kept depressed. If the KEY is released from finger pressure, the DISPLAY becomes the LEVEL indication in five seconds.

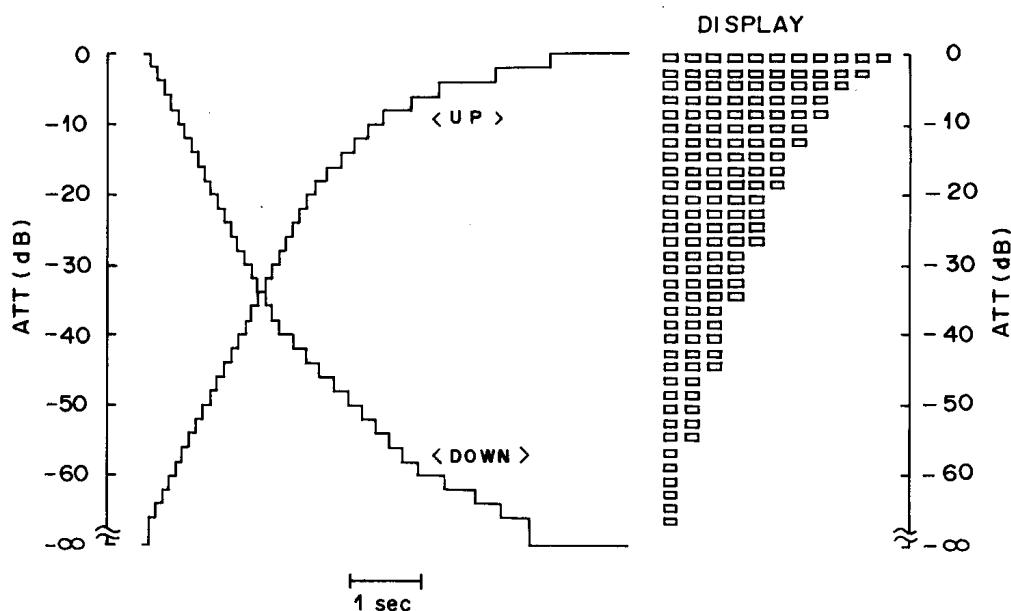

Fig. 12-5 Volume operation

## 12-6. Balance

The following illustrates the relationship between the times in which BALANCE L/R KEY is depressed and the ATT variation and the relationship between the depression times and DISPLAY. If the KEY is released from finger pressure, the DISPLAY becomes the LEVEL indication in five seconds.

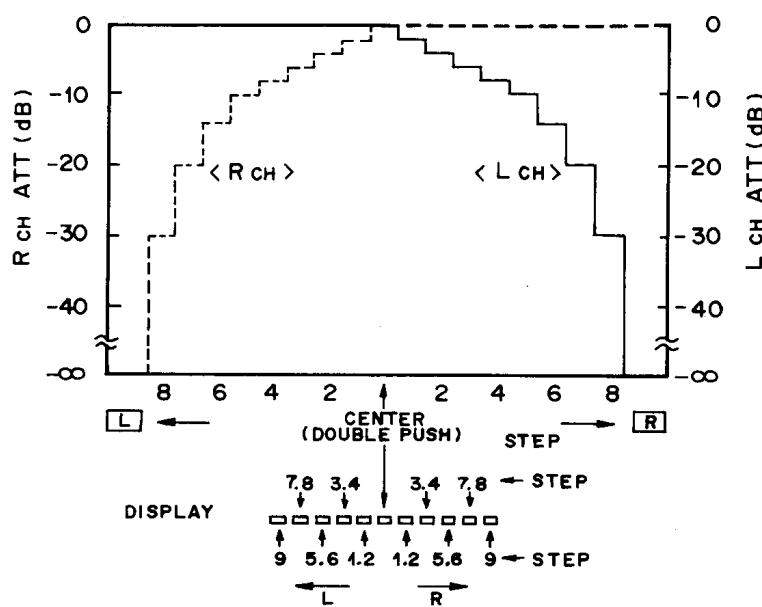

Fig. 12-6 Balance operation

**PIN DESCRIPTION OF IC****1. Pin Functions (PD3050)**

| Pin No. | Name  | I/O | Description   |
|---------|-------|-----|---|
| 1       | Vss   |     | GND   |
| 2       | RES   |     | "H" leads to initialize operation at "L".   |
| 3       | INT   |     | Not in use  |
| 4       | STBY  |     | Not in use  |
| 5       | EXTAL |     |   |
| 6       | XTAL  |     | Connect 4.0 MHz ceramic oscillator (X401; ASS-030) between pins.  |
| 7       | NUM   |     | GND   |
| 8       | TIMER |     | 50/60 Hz clock input (Synchronized AC pulse)  |
| 9       | A7    | I   | TIMER operation mode 1 (explained later)  |
|         |       | O   | FUNCTION mode 1 (explained later)   |
| 10      | A6    | I   | TIMER operation mode 2 (explained later)  |
|         |       | O   | FUNCTION mode 2 (explained later)   |
| 11      | A5    | O   | FUNCTION mode 3 (explained later)   |
| 12      | A4    | O   | SOUND EFFECT mode 1 (explained later)   |
| 13      | A3    | O   | SOUND EFFECT mode 2 (explained later)   |
| 14      | A2    |     | Not in use  |
| 15      | A1    |     | Not in use  |
| 16      | A0    | O   | Remote control data input by Compo code "A6" are converted into each component's compo code and is output as remote control data.                       |
| 17      | B7    |     | Always necessary. (+5.5V)   |
| 18      | B6    | I   | When DECK-II is stopped at the TAPE END during COPY operation, "L" is input, with DECK-I also stopped.  |
| 19      | B5    | I   | When DECK-I is stopped at the TAPE END during COPY operation, "L" is input, with DECK-II also stopped.  |
| 20      | B4    | I   | When DECK-I is stopped at the TAPE END during the RELAY PLAY operation, "H" is input, with DECK-II put in play.   |
| 21      | B3    | I   | When the music is detected either during MUSIC SEARCH or during PLAY operation of the program selection, "H" is input.                                  |
| 22      | B2    | I   | Strobe output to electron VR (IC703; TC9154AP). STROBE on at "H".   |
| 23      | B1    | O   | Output of strobe to FL driver (IC901; LC7570) of FUNCTION system. STROBE on at "H".   |
| 24      | B0    | O   | Output of strobe to FL driver (IC902; LC7570) in TIMER system. STROBE on at "H".  |
| 25      | C7/TX | O   | KEY SCAN STROBE output 7. STROBE on at "L".   |
|         |       | O   | Output of serial data to TC9154AP and LC7570. (48 bits for TC9154AP; 40 bits for LC7570).   |
| 26      | C6/RX | O   | KEY SCAN STROBE output 6. STROBE on at "L".   |
| 27      | C5/CK | O   | KEY SCAN STROBE output 5. STROBE on at "L".<br>When the serial data is transferred to the TC9154AP and LC7570, it outputs the serial clock.             |
| 28      | C4    | O   | KEY SCAN STROBE output 4. STROBE on at "L".   |
| 29      | C3    | O   | KEY SCAN STROBE output 3. STROBE on at "L".   |
| 30      | C2    | O   | KEY SCAN STROBE output 2. STROBE on at "L".   |
| 31      | C1    | O   | KEY SCAN STROBE output 1. STROBE on at "L".   |
| 32      | C0    | O   | "L" is output only when input is remote control data other than compo code "A6".<br>Here, remote control data are not converted but output at they are. |
| 33      | Vcc   |     | +5.5V   |
| 34      | D1    | I   | KEY input 1. KEY on at "L".   |
| 35      | D2    | I   | KEY input 2. KEY on at "L".   |
| 36      | D3    | I   | KEY input 3. KEY on at "L".   |
| 37      | D4    | I   | KEY input 4. KEY on at "L".   |

| Pin No. | Name    | I/O | Description  |
|---------|---------|-----|--|
| 38      | D5      | I   | KEY input 5. KEY on at "L".  |
| 39      | D6/INT2 | I   | Remote control data are input.   |
| 40      | D7      | I   | PROTECTION input. Power turns off following continuation of one-second "L".  |
| 41      | E0      | O   | Control of POWER AMP MUTING relay (RY251). Relay is on at "H" and off at "L".  |
| 42      | E1      | O   | Control of the inside POWER relay (RY101). Relay is on at "H" and off at "L".  |
| 43      | E2      | O   | Control of OUTLET relay (RY1). Relay is on at "H" and off at "L".  |
| 44      | E3      | O   | MS time constant switchover. "L" during MUSIC SEARCH operation. Otherwise, "H".  |
| 45      | E4      | O   | During the program selection, this is used for music search. Turning this pin to "H" disables the input of between the music MS pulses to enter PRA. |
| 46      | E5      | O   | "L" is output when DECK-I is set to FF, REW or MS mode.  |
| 47      | E6      | O   | "L" is output when DECK-I is put into REVERSE PLAY, REVERSE direction MS, REW or STOP mode.  |
| 48      | E7      | O   | "L" is output when DECK-I is put into FORWARD PLAY, FORWARD direction MS, FF or STOP mode.   |
| 49      | F0      | O   | "L" is output when set to HIGH SPEED COPY mode.  |
| 50      | F1      | O   | "L" is output when set to COPY and HIGH SPEED COPY mode.   |
| 51      | F2      | O   | "H" is output when DECK-II is put into REC MUTE operation.   |
| 52      | F3      | O   | "L" is output when DECK-II is put into PAUSE mode.   |
| 53      | F4      | O   | "L" is output when DECK-II is shifted from STOP to REC mode or REC KEY is depressed in the STOP mode.  |
| 54      | F5      | O   | "L" is output when DECK-II is put in FF, REW or MS mode.   |
| 55      | F6      | O   | "L" is output when DECK-II is put into REVERSE PLAY, REVERSE REC, reverse direction MS, REW or STOP mode.  |
| 56      | F7      | O   | "L" is output when DECK-II is put into FORWARD PLAY, FORWARD REC, forward direction MS, FF or STOP mode.   |
| 57      | G7      | O   | "L" is output during program play or copy to avoid auto-reverse.   |
| 58      | G6      | I   | Detects the presence of cassette half of deck-I. Presence of half leads to "L".  |
| 59      | G5      | I   | Detects whether DECK-I is in STOP mode. STOP mode leads to "L".  |
| 60      | G4      | I   | Detects whether DECK-II is in STOP mode. STOP mode leads to "L".   |
| 61      | G3      | I   | Detects the presence of DECK-II cassette half. Presence of half leads to "L".  |
| 62      | G2      | I   | Detects the erroneous erasure prevention claw on the FORWARD side of DECK-II cassette half. Presence of the claw leads to "L".                       |
|         |         | I   | Detects the DECK-II FORWARD LED on/off. LED on leads to "H".   |
| 63      | G1      | I   | Detects the erroneous erasure prevention claw on the reverse side of DECK-II cassette half. Presence of the claw leads to "L".                       |
|         |         | I   | Detects the DECK-II reverse LED on/off. LED on leads to "H".   |
| 64      | G0      | O   | Control of PHONO/CD SYNCHRO LED on/off. LED on leads to "H" and LED off to "L".  |

| <b>D4</b> | I<br>REW       | I<br>REVERSE  |                | PHONO/CD<br>SYNCHRO | (SLEEP)         | TIME<br>-        | BALANCE<br>R |
| <b>D5</b> | I<br>FF        | I<br>FORWARD  | I<br>STOP      |                     |                 | TIMER<br>STANDBY | MUTING       |

(ALL keys are tact switch)

**3. TIMER OPERATION MODE**

|             | <b>A7</b> | <b>A6</b> |
|-------------|-----------|-----------|
| TIMER REC   | 0         | 1         |
| TIMER PLAY  | 1         | 0         |
| TIMER TUNER | 0         | 0         |

**4. SOUND EFFECT MODE**

|                  | <b>A4</b> | <b>A3</b> |
|------------------|-----------|-----------|
| SOUND EFFECT OFF | 1         | 1         |
| STEREO WIDE      | 0         | 1         |
| SIMULATED STEREO | 1         | 0         |
| S. WIDE and S.S. | 0         | 0         |

As cited above, mode is switched over by the output from pin(12) of IC401 to pins(9) and(11) of IC355 or from pin(13) of IC401 to 10-1(H) or 0(L) of IC355.

**5. FUNCTION MODE**

|       | <b>A7</b> | <b>A6</b> | <b>A5</b> |
|-------|-----------|-----------|-----------|
| TAPE  | 0         | 0         | 1         |
| CD    | 1         | 0         | 0         |
| VIDEO | 0         | 1         | 0         |
| TUNER | 1         | 1         | 0         |
| PHONO | 0         | 0         | 0         |

As cited above, function is switched over by the output from pins (9), (10) or (11) of IC401 and to 1H or 0(L) to the respective pins (10)(9) and (6) of IC302.

## Tape logic control section

### 1. PRA

■ Input port ..... With the exception of MS, MODE and ASO, "L" is active.

■ Clock frequency ..... 6.4 kHz

■ Pin description

### [TC9312N-014] IC402

| Pin No. | Name      | I/O | Description  |
|---------|-----------|-----|--|
| 2       | OSC       |     | Generates clock of 6.4kHz at externally attached C (8200pF) and R(33kΩ).   |
| 3       | Clearing  | I   | Perform programming of 0 address at "L→H".<br>Perform initializing operation (mentioned later).  |
| 4       | FWD       | I   | FWD PLAY input port Becomes STOP by pressing twice.  |
| 5       | REV       | I   | REV PLAY input port Becomes STOP by pressing twice.  |
| 6       | FAST      | I   | By pressing twice with FWD or REV, they respectively become FF or REW.   |
| 7       | MS        | I   | Receives MS pulse between music only during MS, and shifts to PLAY mode.   |
| 8       | COPY(X1)  | I   | Similar to issuing of output that shifts to PLAY mode to 1 mechanism driver IC (IC405), it outputs "L" during COPY only for the switching of the signal path (pin ⑯).  |
| 9       | COPY(X2)  | I   | Identical with operation of COPY(X1). However, the X2 pin of pin ⑰ is "L".   |
| 10      | PLAY SW   | I   | An input port to determine whether the cassette mechanism is in PLAY mode or not. By rising of the head base, the leaf SW is closed and this port is set at "L".   |
| 11      | MODE      | I   | Reverse mode setting port.<br>= POS. "L"<br>RELAY POS. NC } Set by means of S11<br>⇒ POS. NC }<br>⇒ POS. "H"   |
| 12      | INH PLAY  | I   | Not in use   |
| 13      | ASO       | I   | It is an abbreviation of Auto Stop Output, and by the pulse of ASO becoming nonexistent in the mechanism driver IC, it shifts to STOP during $\square$ or inverse direction during $\square$ operation (Except FF/REW).(See timing chart No.3)           |
| 14      | STOP OUT  | O   | It is "L" only during 1 mechanism STOP, and the others output "H".   |
| 15      | RELAY OUT | O   | Generates approx. 440 msec "H" pulse during PLAY → STOP by the ASO at tape end.  |
| 16      | COPY END  | O   | Generates approx. 440 msec "L" pulse in the COPY → STOP mode (mechanism 1), so that mechanism 2 may be simultaneously stopped if mechanism 1 is stopped during the copy mode (See timing chart No. 4 DUB END.)   |
| 17      | X2        | O   | When COPY(X2) is input, this port becomes "L" after approximately 830msec and is supplied to the motor speed control circuit (On the 1 mechanism side). (See D SPEED of Timing chart No.12)  |
| 18      | COPY      | O   | When COPY(X1) or (X2) is input, this port becomes "L" after approximately 260msec, and is used as a signal for switching the signal path.(See DUBBING of timing chart No.10 or 12)   |
| 19      | REV IND   | O   | Output for REV IND   |
| 20      | FWD IND   | O   | Output for FWD IND   |
| 21      | SOL       | O   | Output for solenoid drive  |
| 22      | CPM       | O   | It is an output port for capstan motor control, and is input to pins ⑤ and ⑥ of driver IC405 (TA7780AN).<br>As the condition for the capstan motor to rotate, one of CPM pin, RM1 pin or RM2 pin of PRA becomes "H" or during "L" of pin ⑯ of driver IC. |
| 23      | RM2       | O   | It is a reel motor control signal and with output at "H", it is taken up in the REV direction.   |
| 24      | RM1       | O   | It is a reel motor control signal and with output at "H", it is taken up in the FWD direction.   |
| 25      | TIMER     | O   | Not in use   |

| Pin No. | Name    | I/O | Description   |
|---------|---------|-----|---|
| 26      | MS MUTE | O   | "H" output only in the MS mode, ensuring the MS operation (See timing chart No. 9 MS mute). "H" is attained after 130 msec because of the possibility of MS malfunction before the mechanism enters the operation stability domain. |
| 27      | MUTE 1  | O   | Perform muting to 1 mechanism playback EQ output when the 1 mechanism is at "H" output except during PLAY.  |
| 28      | VDD     |     | 5.0V  |

## [TC9312N-015] IC403

| Pin No. | Name         | I/O | Description  |
|---------|--------------|-----|--|
| 2       | OSC          |     | Generates clock of 6.4kHz at externally attached C (8200pF) and R(33kΩ).   |
| 3       | Clearing     | I   | Perform programming of 0 address at "L→H".<br>Perform initializing operation (mentioned later).  |
| 4       | FWD          | I   | FWD PLAY input port Becomes STOP by pressing twice.  |
| 5       | REV          | I   | REV PLAY input port Becomes STOP by pressing twice.  |
| 6       | FAST         | I   | By pressing twice with FWD or REV, they respectively become FF or REW.   |
| 7       | REC          | I   | It becomes into REC PAUSE mode by KEY IN, and generates "H" output to pin 24. However, it depends on the state of pins 12 and 14. (mentioned later)  |
| 8       | PAUSE        | I   | It becomes into the PAUSE mode by KEY IN (2 mechanism only), and the PLAY IND blinks.  |
| 9       | MUTE         | I   | Not in use   |
| 10      | MS           | I   | Receives MS pulse between music only during MS, and shifts to PLAY mode.   |
| 11      | MODE         | I   | REVERSE mode setting port:<br>= POS. "L"<br>RELAY POS. NC Set by S11<br>⇒ POS. NC<br>⇒ POS. "H"  |
| 12      | A. REC F     | I   | In the sense of ANTI REC, examine the existence of the accidental erasure prevention claws on the FWD side of the cassette half. "L" at the existence of claws.  |
| 13      | ASO          | I   | It is an abbreviation of Auto Stop Output, and by the pulse of ASO becoming nonexistent in the mechanism driver IC, it shifts to STOP during = or inverse direction during ⇒ operation (REC • PLAY/PLAY) (See timing chart No.16)                      |
| 14      | A. REC R     | I   | Examine the existence of the accidental erasure prevention claws on the REV side. "L" at the existence of claws.   |
| 15      | PLAY SW      | I   | An input port to determine whether the cassette mechanism is in PLAY mode or not. By rising of the head base, the leaf SW is closed and this port is set at "L".   |
| 16      | REV IND      | O   | Output for REV IND   |
| 17      | FWD IND      | O   | Output for FWD IND   |
| 18      | Double speed | O   | Output at "L" in the REC mode, and with the OR of the X2 output of 1 mechanism PRA, control the 2 mechanism speed switching circuit. (See D SPEED of timing chart No. 27 and 26)   |
| 19      | SOL          | O   | Output for solenoid drive  |
| 20      | CPM          | O   | It is an output port for capstan motor control, and is input to pins 5 and 6 of driver IC404 (TA7780AN). As the condition for the capstan motor to rotate, one of CPM pin, RM1 pin or RM2 pin of PRA becomes "H" or during "L" of pin 16 of driver IC. |
| 21      | RM2          | O   | It is a reel motor control signal and with output at "H", it is taken up in the REV direction.   |
| 22      | RM1          | O   | It is a reel motor control signal and with output at "H", it is taken up in the FWD direction.   |
| 23      | MS MUTE      | O   | "H" output is ensured only in MS mode, permitting MS operation (See timing chart No. 25 MS mute). "H" is restored after 130 msec because of possible MS maloperation until the mechanism operation stability domain is attained.                       |

| Pin No. | Name     | I/O | Description  |
|---------|----------|-----|--|
| 24      | REC      | O   | Output at "H" in the REC and REC PAUSE modes, and supply to bias oscillation, REC IND, etc.  |
| 25      | REC MUTE | O   | "H" output provides REC MUT on the REC AMP (IC510) input side. (See timing charts 14, 15, 17 to 32)  |
| 26      | MUTE2    | O   | Other than when performing play with mechanism 2, muting is applied to the mechanism 2 playback EQ output with "H" output.                                       |
| 27      | COPY END | O   | Approx. 440 mesc "L" pulse is generated in the copy → stop mode (mechanism 2) (so that mechanism 1 may be stopped when mechanism 2 is stopped in the copy mode). |

## 2. Operating key explanation

### DECK-I

Only in the case of pin ⑤8 of IC401 being "L" (Deck-I cassette half present).

| Key operation   | Description  |
|-----------------|--|
| STOP (S965)     | "L" is output from pins ④7 and ④8 of IC401 and stop mode is attained, with pins ④ and ⑤ of IC402 at "L". |
| FWD.PLAY (S964) | "L" is output from pin ④8 of IC401 and FWD play mode is attained, with pin ④ of IC401 at "L".            |
| REV.PLAY (S963) | "L" is output from pin ④7 of IC401 and REV play mode is attained, with pin ⑤ of IC402 at "L".            |
| FF (S967)       | "L" is output from pins ④6 and ④8 of IC401. FF mode is attained, with pins ④ and ⑥ of IC402 at "L".      |
| REW (S966)      | "L" is output from pins ④6 and ④7 of IC401 and REW mode is attained with pins ⑤ and ⑥ of IC402 at "L".   |

### DECK-II

Only in the case of pin ⑥1 of IC401 being "L" (Deck-II cassette half present).

| Key operation   | Description   |
|-----------------|---|
| STOP (S958)     | "L" is output from pins ⑤5 and ⑤6 of IC401 and stop mode is attained, with pins ④ and ⑤ of IC403 at "L".  |
| FWD.PLAY (S957) | "L" is output from pin ⑤6 of IC401 and FWD play mode is attained, with pin ④ of IC403 at "L".   |
| REV.PLAY (S956) | "L" is output from pin ⑤5 of IC401 and REV play mode is attained, with pin ⑤ of IC403 at "L".   |
| FF (S960)       | "L" is output from pins ⑤4 and ⑤6 of IC401 and FF mode is attained, with pins ④ and ⑥ of IC403 at "L".  |
| REW (S959)      | "L" is output from pins ⑤4 and ⑤5 of IC401 and REW mode is attained, with pins ⑤ and ⑥ of IC403 at "L".   |
| PAUSE (S953)    | (Only when DECK-II is in PLAY, REC and PAUSE mode)<br>In PLAY and REC mode, "L" is output from pin ⑤2 of IC401 and PAUSE mode is attained, with pin ⑧ of IC403 at "L".<br>In PAUSE mode, "L" is output from pins ⑤5 or ⑤6 of IC401, and PAUSE mode is released.   |
| REC (S955)      | (Only when pin ⑥0 of IC401 is at "L" and at least either pins ⑥2 or ⑥3 is at "L".)<br>"L" is output from pin ⑤3 of IC401 and REC standby mode is attained with pin ⑦ of IC403 at "L".<br>In PAUSE mode, pressing of S955 leads to REC PAUSE mode.   |
| REC MUTE (S954) | (Only when DECK-II is in REC or REC PAUSE mode.)<br>"L" is output for 4 sec from pin ⑤1 of IC401. If KEY is kept depressed after an elapse of 4 sec, "H" is output until the KEY is released.<br>Release of key leads to REC PAUSE mode, with pins ⑤1 and ⑤2 at "L". Unless key is depressed after an elapse of 4 sec, "L" is output from pins ⑤1 and ⑤2 of IC401 and REC PAUSE mode is attained. |

## DECK-I and II

| Key operation              | Description   |
|----------------------------|---|
|                            | Only when pins ⑤⁸, ⑨⁹, ⑩⁺, ⑪¹¹ and ⑫¹² of IC401 are all at "L", (DECK-I half, STOP mode, DECK-II half, FWD side erroneous erasure prevention claw and STOP mode present.)   |
| Constant speed COPY (S952) | "L" is output from pins ④⁸, ⑩⁹, ⑪⁺ and ⑫¹¹ of IC401, and, with pins ④ and ⑧ of IC402 and pins ④ and ⑦ of IC403 at "L", DECK-I is put into FWD PLAY mode and DECK-II into FWD REC mode.  |
| Double speed COPY (S951)   | "L" is output from pins ④⁸, ⑨⁹, ⑩⁺, ⑪¹¹ and ⑫¹² of IC401, and, with pins ④, ⑧, ⑨ of IC402 and pins ④ and ⑦ of IC403 at "L", DECK-I is put into double speed FWD and PLAY mode and DECK-II into double speed FWD and REC mode.   |
| REV.MODE (S11)             | GND (=), NC(RELAY ⇌), and VDD (⇒) to pin ⑪ of IC402 and IC403 with S11.<br>If S11 is in the play position, RELAY out signal is input into pin ⑩ of IC401 from pin ⑯ of IC402, and, RELAY play is ensured only when half is entered into DECK-II.  |
| TIMER MODE (S977)          | Connect the respective VDD, GND (TAPE PLAY), GND, VDD (TAPE REC) and GND, GND (TURN) with S977 to pins ⑨ and ⑩ of IC401.<br>During timer standby, when the time presently becomes start time the power turns on, and by making pins ⑨ and ⑩ of IC401 into input port and after detecting timer mode, they go into their respective operations.<br>TAPE PLAY: Set function to tape.<br>If pin ⑤⁸ of IC401 is at "L", "L" is output from pin ④⁸ and DECK-I is set into FWD PLAY mode.<br>If pin ⑤⁸ of IC401 is at "H" and pin ⑪¹¹ is at "L", "L" is output from pin ⑫¹¹ and DECK-II is put into FWD PLAY mode.<br>If both pins ⑤⁸ and ⑪¹¹ of IC401 are at "H", neither DECK-I nor DECK-II is operable.<br>TAPE REC: Only when both pins ⑪¹¹ and ⑫¹² of IC401 are at "L", DECK-II is put into FWD REC mode with pins ⑤⁹ and ⑥⁰ at "L".<br>Record the SOURCE of FUNCTION with TIMER STANDBY set.<br>TUNER: Set FUNCTION to TUNER. |
| COPY END                   | During constant or double speed copy operation, if DECK-I (DECK-II) is stopped at the tape end, "L" is output from pin ⑯ of IC402 (pin ⑯ of IC403) and pin ⑯ (⑯ of IC401 is at "L". Here, "L" is output from pins ⑤⁹ and ⑥⁰ (④⁸ and ⑫¹¹) of IC401 and DECK-II (DECK-I) is stopped with pins ④ and ⑤ of IC403 (IC402) at "L".  |

## Data Format

TC9154AP inputs the arbitrarily given data of attenuation from DATA, CK and ST pins.

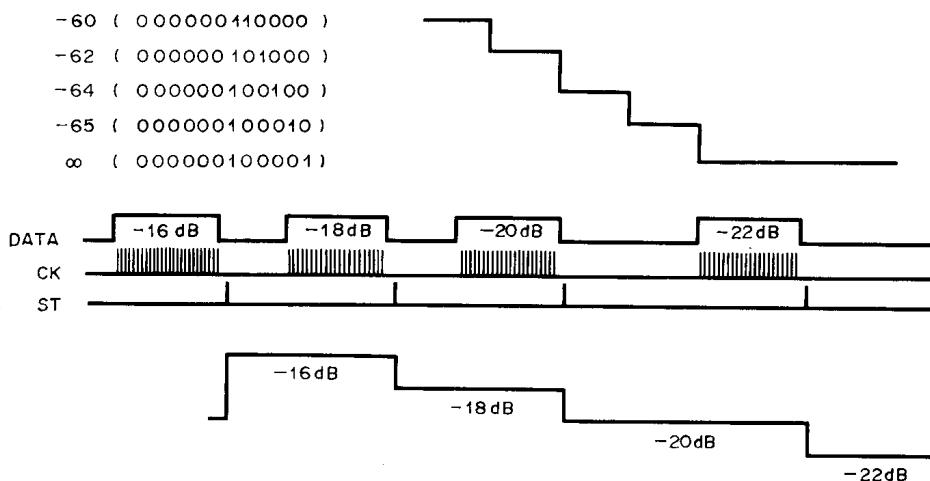

Data consist of 18 bits as follows.

If, for Example, input of data (000100001000011000) by CK from DATA pin leads to the display of attenuation -32 dB.

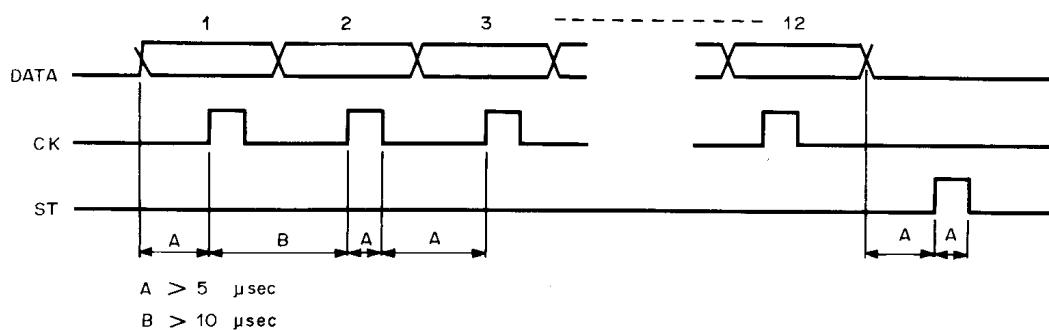

Data bits 1 to 7 are set to 10 dB/step and 8 to 12 to 2 dB/step. Bit 13 may be either "1" or "0". Bits 14 and 15 are selected in accordance with the right or left channel, where "1", "0" = Lch, "0", "1" = Rch and "1", "1" = L & Rch. Bits 16 to 18 are fixed at "0".

Infinite Attenuation is carried out by means of -68 dB steps; hence, one stepup from the infinite number leads to -66 dB.

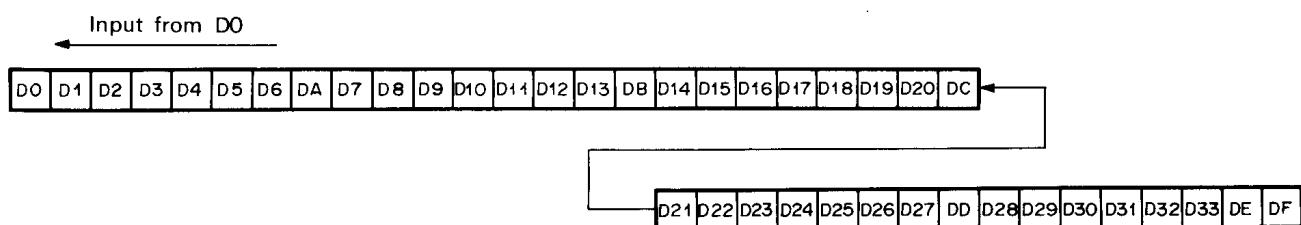

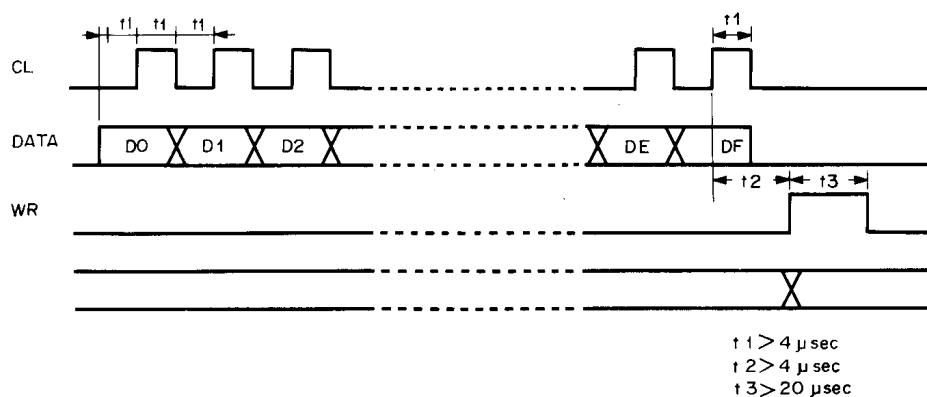

Alteration to the data fetched will entirely be synchronized with ST signals.

# 13. ADJUSTMENTS

## 13.1 MECHANICAL ADJUSTMENT

| 1. Tape Speed Adjustment (Normal speed adjustment should be carried out after double speed adjustment.)       |  |   |   |
|---|--|---|---|
| Mode  | Test tape                                      | Adjustment position   | Specification rating (playback frequency)   |
| PLAY  | Play the STD-301 tape (3kHz)                   | Variable resistor control   | 3000Hz ± 5Hz  |
| Play  | Play the STD-301 tape (3 kHz) (DECK I)         | VR406 (Double speed)  | Adjust so that it becomes 6075 Hz. (Short circuit TP401 and TP402 after PLAY button has been pushed.) |
|   |  | VR405 (Normal speed)  | Adjust so that it becomes 3045 Hz. (Push PLAY SW.)  |
|   | Play the STD-301 tape (3 kHz) (DECK II)        | VR404 (Double speed)  | Adjust so that it becomes 6030 Hz. (Short circuit TP401 and TP402 after PLAY button has been pushed.) |
|   |  | VR403 (Normal speed)  | Adjust so that it becomes 3015 Hz. (Push PLAY SW after PLAY button has been pushed.)                  |
| 2. Tape Transport Adjustment  |  |   |   |
| Mode  | Adjustment position                            | Specifications  |   |
| FWD   | FWD azimuth adjustment screw                   | Play back 10 kHz at -20 dB with STD-331B test tape.   |   |
| REV   | REV azimuth adjustment screw                   | Adjust so that the signal output at the individual test points of TP1 and TP2 become maximum. |   |
| Load a mirror-equipped cassette half, and lift the head base by hand so that the tape touches the tape guide. |  |   |   |
| STOP  | Height adjustment screws (both left and right) | Check (visually) that the tape is located in the center of the tape guide.                    |   |
| FWD PLAY  | FWD height adjustment screw                    |   |   |
| REV PLAY  | REV height adjustment screw                    | Adjust the first tape guide to ensure that there is no tape curling.                          |   |

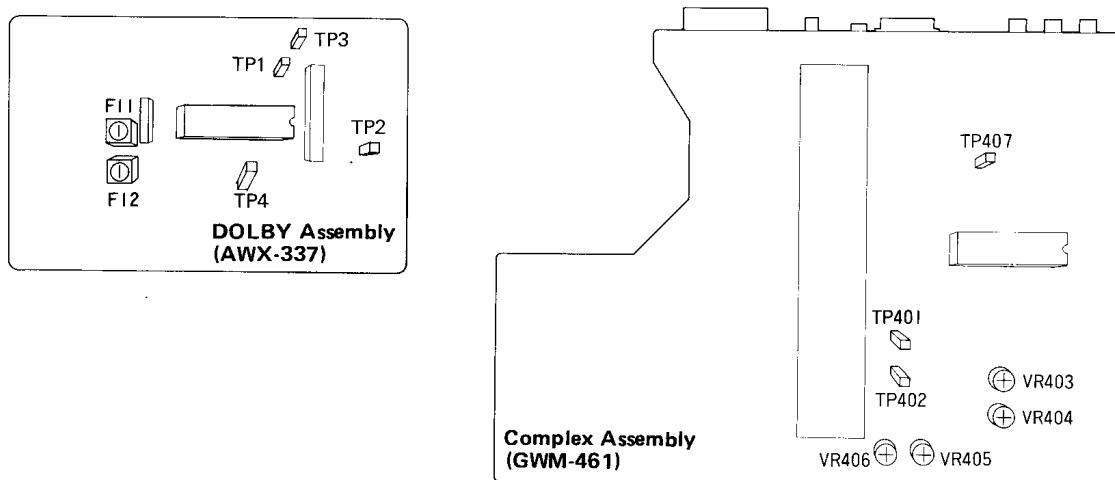

Fig. 13-1 Tape speed adjustment

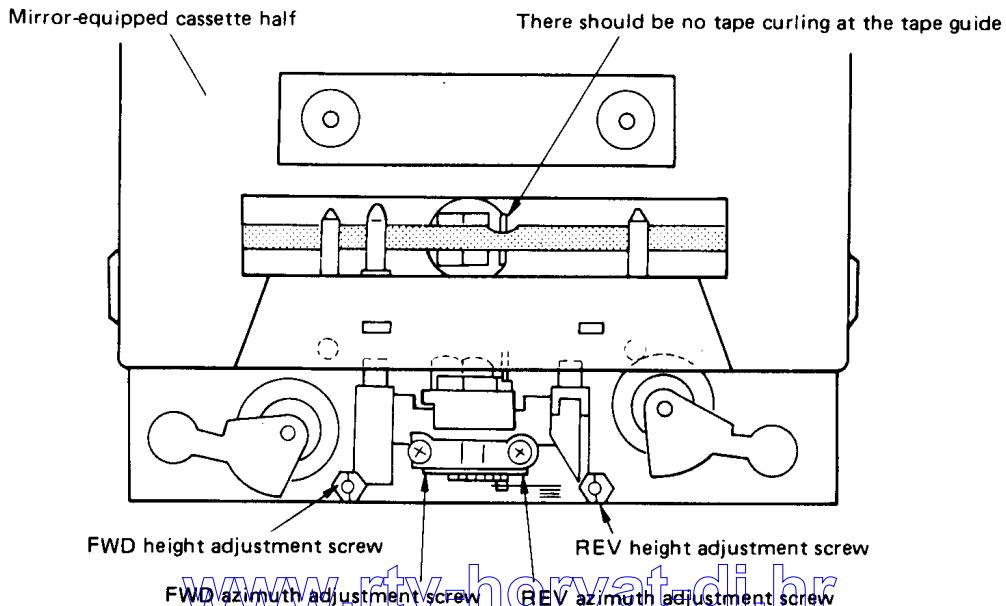

Fig. 13-2 Tape pass adjustment

## 13.2 ELECTRICAL ADJUSTMENT

### Adjustment Conditions

1. The mechanical adjustments must be completed first.
2. The head must be cleaned and demagnetized.
3. Allow the deck to age for at least a few minutes before commencing any electrical adjustments.
4. The reference signal is 0dB=1Vrms.
5. Unless otherwise specified, the switches listed below are left in the positions indicated.

DOLBY NR : OFF

### Test Tapes

- STD-331B : Playback adjustments  
(See Fig. 13-3)  
STD-608A : NORMAL tape  
STD-620 : CrO<sub>2</sub> tape  
STD-610 : METAL tape

### Adjustment Procedure

#### Deck I

1. Head azimuth adjustment
2. Playback level adjustment

#### Deck II

1. Head azimuth adjustment
2. Playback level adjustment
3. Recording/Playback frequency response
4. Recording level adjustment

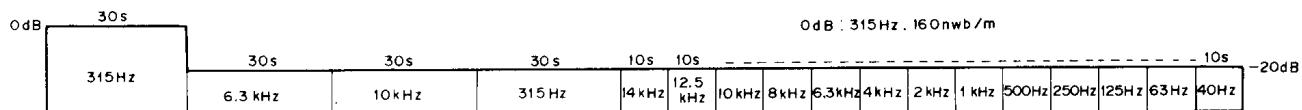

Fig. 13-3 Test tape STD-331B

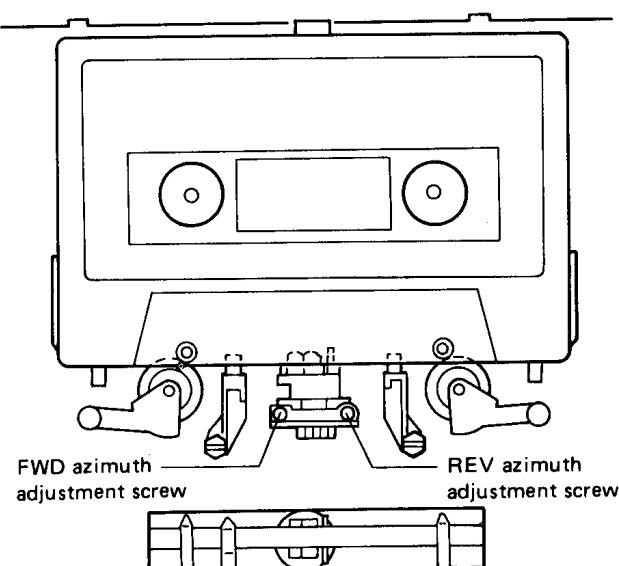

Fig. 13-4 Head azimuth adjustment

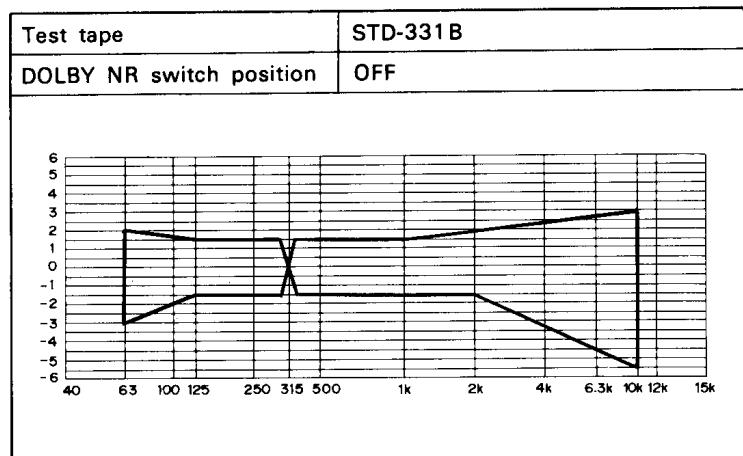

Fig. 13-5 Allowable playback frequency response zone

• **DECK I ADJUSTMENT** (with auto tape selector function)

**1. Head Azimuth Adjustment** • Set VR501 and VR502 (playback level adjustment) to MAX positions (turn fully clockwise)

| Tape selector | Mode | Input signal/test tape                         | Adjustment location                           | Measuring location | Adjustment value               | Remarks   |
|---------------|------|--|---|--------------------|--------------------------------|---|
| NORM          | PLAY | Play 10kHz—20dB portion of STD-331B test tape. | Head azimuth adjustment screw.<br>(Fig. 13-4) | TP1 (L)<br>TP2 (R) | Maximum playback signal level. | Apply "screw-lock" after completing adjustment. |

**2. Playback Level Adjustment** • Adjust precisely since this adjustment sets the playback Dolby level.

| Tape selector | Mode | Input signal/test tape                                | Adjustment location    | Measuring location | Adjustment value    | Remarks |
|---------------|------|---|------------------------|--------------------|---------------------|---------|
| NORM          | PLAY | Play the 315Hz 0dB portion of the STD-331B test tape. | VR501 (L)<br>VR502 (R) | TP1 (L)<br>TP2 (R) | -13 dBm<br>(175 mV) |         |

• **DECK II ADJUSTMENT** (with auto tape selector function)

**1. Head Azimuth Adjustment** • Set VR503 and VR504 (playback level adjustment) to MAX positions (turn fully clockwise)

| Tape selector | Mode | Input signal/test tape                         | Adjustment location                           | Measuring location | Adjustment value               | Remarks   |
|---------------|------|--|---|--------------------|--------------------------------|---|
| NORM          | PLAY | Play 10kHz—20dB portion of STD-331B test tape. | Head azimuth adjustment screw.<br>(Fig. 13-4) | TP1 (L)<br>TP2 (R) | Maximum playback signal level. | Apply "screw-lock" after completing adjustment. |

**2. Playback Level Adjustment** • Adjust precisely since this adjustment sets the playback Dolby level.

| Tape selector | Mode | Input signal/test tape                                 | Adjustment location    | Measuring location | Adjustment value    | Remarks |
|---------------|------|--|------------------------|--------------------|---------------------|---------|
| NORM          | PLAY | Play the 315 Hz 0dB portion of the STD-331B test tape. | VR503 (L)<br>VR504 (R) | TP1 (L)<br>TP2 (R) | -13 dBm<br>(175 mV) |         |

**3. Recording/Playback Frequency Response Adjustment** • As this adjustment adjusts the recording bias, care should be exercised so as not to deteriorate the distortion factor by under bias.

| Tape selector | Mode     | Input signal/test tape   | Adjustment location | Measuring location     | Adjustment value   | Remarks   |  |
|---------------|----------|--|---------------------|------------------------|--------------------|---|--|
| NORM          | REC      | Apply a 315 Hz signal to the CD terminals.   | 1                   | Input signal level     | TP1 (L)<br>TP2 (R) | -33 dBm<br>(17.5 mV)  | Set the INPUT level control to the center position (rear panel). |
| NORM          | REC/PLAY | Record 315Hz and 10 kHz signals on the STD-608A test tape, and then play-back signals. | 2                   | VR507 (L)<br>VR508 (R) | TP1 (L)<br>TP2 (R) | Repeat the recording and palyback processes and adjust accordingly until the 10 kHz playback level is within $0 \pm 0.5$ dB of the 315Hz level. |  |

• Change the test tape and the DOLBY NR switch position and check that the frequency response zone indicated in Fig. 13-7 is satisfied.

**4. Recording Level Adjustment**

| Tape selector | Mode     | Input signal/test tape  | Adjustment location | Measuring location     | Adjustment value   | Remarks   |  |
|---------------|----------|---|---------------------|------------------------|--------------------|---|--|
| NORM          | REC      | Apply a 315 Hz signal to the CD terminals.  | 1                   | Input signal level     | TP1 (L)<br>TP2 (R) | -13 dBm<br>(175 mV)   |  |
| NORM          | REC/PLAY | Record the 315Hz signal onto the STD-608A test tape, and then paly the signal back. | 2                   | VR505 (L)<br>VR506 (R) | TP1 (L)<br>TP2 (R) | Repeat the recording the playback processes, and adjust accordingly until a playback level of -13 dBm (175 mV) is obtained. |  |
| METAL         | REC/PLAY | Record the 315Hz signal onto the STD-610 test tape, and then play the signal back.  | 3                   |                        | TP1 (L)<br>TP2 (R) | Check that the 315Hz playback level is $-13$ dBm $\pm 2$ dB.  |  |

## 13. RÉGLAGE

## 13.1 RÉGLAGES MÉCANIQUES

| 1. Réglage de la vitesse de défilement de la bande (Régler la vitesse normale après avoir réglé la vitesse double.) |   |                                |   |
|---|---|--------------------------------|---|
| Mode  | Bandes d'étalonnage                           | Position de réglage            | Spécifications nominales (fréquence de lecture)   |
| LECTURE   | Lire la bande STD-301 (3kHz)                  | Contrôle à résistance variable | 3000Hz±5Hz  |
| Utiliza   | Utiliza la cinta STD-301 (3 kHz)<br>(Deck I)  | VR406 (Vitesse double)         | Régler pour obtenir 6075 kHz. (Appuyer sur le bouton PLAY et court-circuiter TP401 et TP402.) |
|   |   | VR405 (Vitesse normale)        | Régler pour obtenir 3045 kHz. (Appuyer sur SW PLAY.)  |
|   | Utiliza la cinta STD-301 (3 kHz)<br>(Deck II) | VR404 (Vitesse double)         | Régler pour obtenir 6030 kHz. (Appuyer sur le bouton PLAY et court-circuiter TP401 et TP402.) |
|   |   | VR403 (Vitesse normale)        | Régler pour obtenir 3015 kHz. (Appuyer sur le bouton PLAY puis sur SW PLAY.)                  |

## 2. Réglage de transport de bande

| Mode    | Position de réglage                       | Spécifications nominales  |
|---------|---|---|
| Avant   | Vis de réglage d'azimut en avance rapide. | Effectuer une écoute 10 kHz à -20 dB avec la bande d'essai STD-331 B.                                 |
| Arrière | Vis de réglage d'azimut en retour rapide. | Régler de sorte de que le signal de sortie aux points d'essai individuels de TP1 et TP2 soit maximum. |

**Charger une demi-cassette à miroir et soulever l'embase de la tête pour que la bande touche le guide de bande.**

|                                  |   |  |
|----------------------------------|---|--|
| <b>ARRÊT</b>                     | Vis de réglage de hauteur (droite et gauche). | Effectuer un contrôle (visuel) pour s'assurer que la bande est placée au centre du guide de bande. |
| <b>AVANCE RAPIDE<br/>LECTURE</b> | Vis de réglage de hauteur en avance rapide.   | Ajuster le premier guide de bande pour qu'aucun froissement de la bande ne se produise.            |
| <b>RETOUR RAPIDE<br/>LECTURE</b> | Vis de réglage de hauteur en retour rapide.   |  |

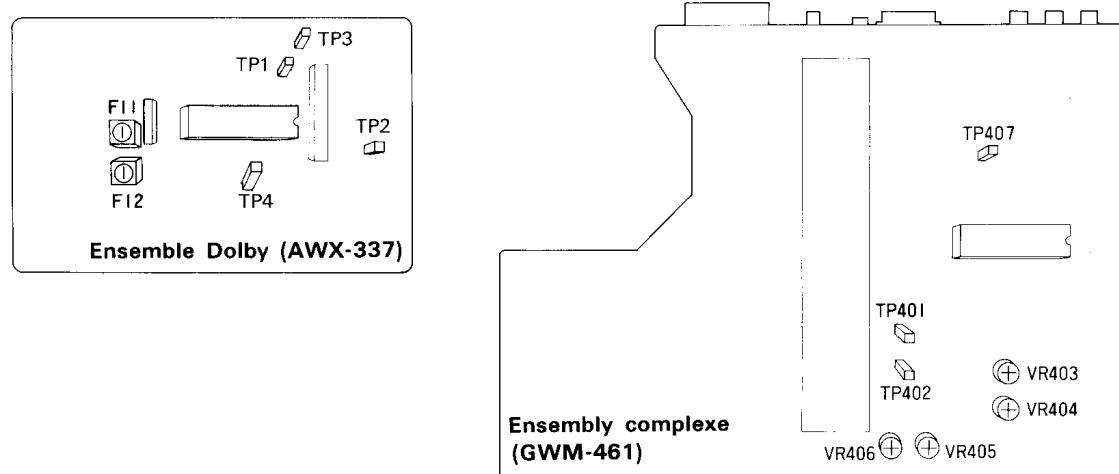

Fig. 13-1 Réglage de la vitesse de défilement

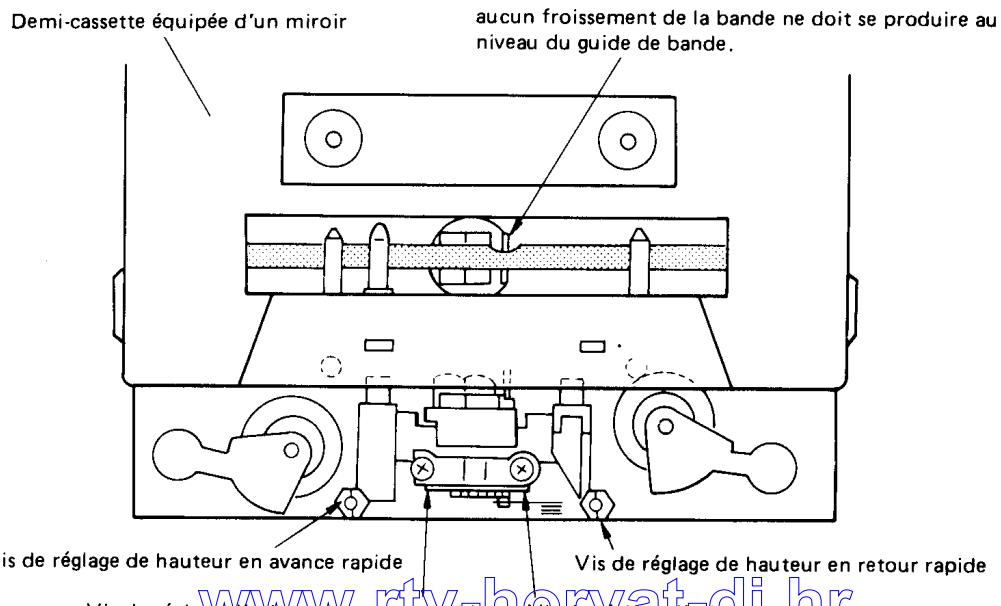

Fig. 13-2 Réglage du passage de la bande

## 13.2 RÉGLAGES ÉLECTRIQUES

### Conditions nécessaires pour effectuer les réglages

1. Les réglages des mécanismes doivent avoir été faits avant.
2. La tête magnétique doit être propre et démagnétisée.
3. La platine-cassette doit avoir fonctionnée pendant quelques minutes avant de commencer les réglages électriques.
4. Le signal de référence est de 0dB=1V effi.
5. A moins d'une indication contraire, les commutateurs mentionnés ci-dessous doivent se trouver dans la position indiquée.

DOLBY NR : Sur OFF

### Bandes de mesure

- STD-331B : Réglage de lecture (See Fig. 13-1)  
 STD-608A : Bande vierge ordinaire (NORMAL)  
 STD-620 : Bande vierge au chrome ( $\text{CrO}_2$ )  
 STD-610 : Bande vierge au fer (METAL)

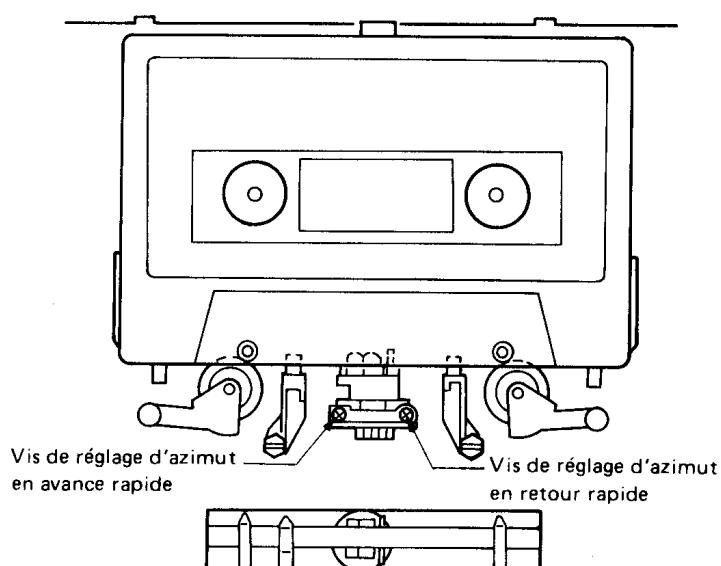

Fig. 13-4 Réglage d'azimut de tête magnétique

### Procédure de réglage

#### Platine I

1. Réglage de l'azimutage de la tête.
2. Réglage du niveau de reproduction.

#### Platine II

1. Réglage de l'azimutage de la tête.
2. Réglage du niveau de reproduction.
3. Réponse en fréquences enregistrement/reproduction.
4. Réglage du niveau d'enregistrement.

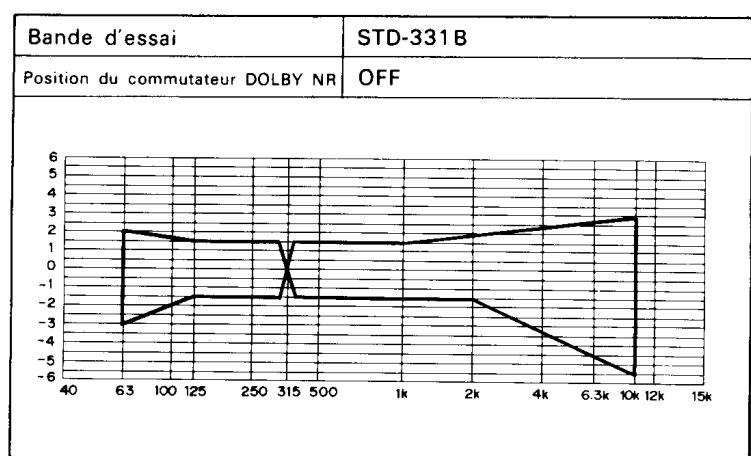

Fig. 13-5 Réponse en fréquence admissible en lecture

**• RÉGLAGE DE LA PLATINE I**

• (Avec sélecteur automatique de bande)

- 1. Réglage de l'azimutage de la tête** • Placer le VR501 et le VR502 (Réglage du niveau de reproduction) sur la position maximale MAX (tourner complètement dans le sens des aiguilles d'une montre).

| Sélecteur de bande | Mode                | Signal d'entrée/bande d'essai                                   | Emplacement du réglage                                | Emplacement de mesure | Valeur de réglage                         | Remarques  |
|--------------------|---------------------|---|---|-----------------------|---|--|
| Normal (NORM)      | Reproduction (PLAY) | Reproduire la portion 10kHz –20dB de la bande d'essai STD-331B. | Vis de réglage de l'azimutage de la tête. (Fig. 13-4) | TP1 (L)<br>TP2 (R)    | Niveau de signal de reproduction maximal. | Mettre en place "l'arrêt de vis" après avoir terminé ce réglage. |

**2. Réglage du niveau de reproduction**

• Procéder à cet réglage avec précision car celui-ci détermine le niveau de reproduction du DOLBY.

| Sélecteur de bande | Mode                | Signal d'entrée/bande d'essai                                 | Emplacement du réglage              | Emplacement de mesure | Valeur de réglage   | Remarques |
|--------------------|---------------------|---|-------------------------------------|-----------------------|---------------------|-----------|
| Normal (NORM)      | Reproduction (PLAY) | Reproduire la portion 315Hz 0dB de la bande d'essai STD-331B. | VR501 gauche (L)<br>VR502 droit (R) | TP1 (L)<br>TP2 (R)    | –13 dBm<br>(175 mV) |           |

**• RÉGLAGE DE LA PLATINE II**

(Avec sélecteur automatique de bande)

- 1. Réglage de l'azimutage de la tête** • Placer le VR503 et le VR504 (Réglage de niveau de reproduction) sur la position maximale (tourner complètement dans le sens des aiguilles d'une montre).

| Sélecteur de bande | Mode                | Signal d'entrée/bande d'essai                                   | Emplacement du réglage                                | Emplacement de mesure | Valeur de réglage                         | Remarques   |
|--------------------|---------------------|---|---|-----------------------|---|---|
| Normal (NORM)      | Reproduction (PLAY) | Reproduire la portion 10kHz –20dB de la bande d'essai STD-331B. | Vis de réglage de l'azimutage de la tête. (Fig. 13-4) | TP1 (L)<br>TP2 (R)    | Niveau de signal de reproduction maximal. | Mettre en place "l'arrêt de vis" après avoir effectué ce réglage. |

**2. Réglage du niveau de reproduction**

• Procéder à ce réglage avec précision car celui-ci détermine le niveau de reproduction du DOLBY.

| Sélecteur de bande | Mode                | Signal d'entrée/bande d'essai                                 | Emplacement du réglage              | Emplacement de mesure | Valeur de réglage   | Remarques |
|--------------------|---------------------|---|-------------------------------------|-----------------------|---------------------|-----------|
| Normal (NORM)      | Reproduction (PLAY) | Reproduire la portion 315Hz 0dB de la bande d'essai STD-331B. | VR503 gauche (L)<br>VR504 droit (R) | TP1 (L)<br>TP2 (R)    | –13 dBm<br>(175 mV) |           |

- 3. Réglage de la réponse en fréquences** • Cette commande permet de régler la polarisation d'enregistrement et doit être manipulée avec précaution d'enregistrement et de reproduction de manière à ne pas dérégler le facteur de distorsion par une sous-polarisation.

| Sélecteur de bande | Mode                                   | Signal d'entrée/bande d'essai  | Emplacement du réglage                | Emplacement de mesure | Valeur de réglage  | Remarques   |
|--------------------|--|--|---------------------------------------|-----------------------|--|---|
| Normal (NORM)      | Enregistrement (REC)                   | Appliquer un signal 315 Hz aux bornes CD.  | 1 Entrer le signal de niveau.         | TP1 (L)<br>TP2 (R)    | –33 dBm<br>(17.5 mV)   | Amener la commande de niveau d'entrée sur la position centrale (panneau arrière). |
| Normal (NORM)      | Enregistrement/reproduction (REC/PLAY) | Enregistrer des signaux de 315Hz et 10 kHz sur la bande d'essai STD-608A, et reproduire ensuite les signaux. | 2 VR507 gauche (L)<br>VR508 droit (R) | TP1 (L)<br>TP2 (R)    | Recommencer les procédures d'enregistrement et de reproduction, et procéder au réglage en conséquence jusqu'à ce que le niveau de reproduction du 10 kHz soit compris entre 0 ±0,5dB du niveau du 315Hz. |   |

- Changer la bande d'essai et la position du commutateur de réducteur de bruit DOLBY, et vérifier que la courbe de réponse en fréquences indiquée sur la Fig. 13-7 est respectée.

**4. Réglage du niveau d'enregistrement**

| Sélecteur de bande | Mode                                   | Signal d'entrée/bande d'essai  | Emplacement du réglage        | Emplacement de mesure | Valeur de réglage   | Remarques |
|--------------------|--|--|-------------------------------|-----------------------|---|-----------|
| Normal (NORM)      | Enregistrement (REC)                   | Appliquer un signal 315 Hz aux bornes CD.  | 1 Entrer le signal de niveau. | TP1 (L)<br>TP2 (R)    | –13 dBm<br>(175 mV)   |           |
| Normal (NORM)      | Enregistrement/reproduction (REC/PLAY) | Enregistrer le signal de 315Hz sur la bande d'essai STD-608A, puis reproduire le signal. | 2 VR505 (L)<br>VR506 (R)      | TP1 (L)<br>TP2 (R)    | Recommencer les procédures d'enregistrement et de reproduction, et procéder au réglage jusqu'à ce que un niveau de reproduction de –23 dBv (71 mV) soit obtenu. |           |
| Métal (METAL)      | Enregistrement/reproduction (REC/PLAY) | Enregistrer le signal de 315Hz sur la bande d'essai STD-610, puis reproduire le signal.  | 3                             | TP1 (L)<br>TP2 (R)    | Vérifier que le niveau de reproduction du 315Hz est à –23dBV ± 2 dB   |           |

# 13. AJUSTE

## 13.1 AJUSTE MECANICO

**1. Ajuste de la velocidad de la cinta** (El ajuste de la velocidad normal deberá ser llevado a cabo después del ajuste de la velocidad doble.)

| Modo     | Cinta de prueba  | Posición de ajuste                                  | Valor de especificación (frecuencia de reproducción)   |
|----------|--|---|--|
| PLAY     | Reproducir la STD-301 (3kHz)                               | Control del resistor variable                       | 3000Hz ± 5Hz   |
| Utiliser | Utiliser la bande magnétique STD-301 (3 kHz) (APPAREIL I)  | VR406 (Velocidad doble)<br>VR405 (Velocidad normal) | Ajuste de modo que lleguen a ser 607 Hz. (Ponga en corto circuito TP401 y TP402 después de que el botón de PLAY ha sido presionado.)<br>Ajuste de modo que lleguen a ser 3045Hz.(Presione PLAY SW.)  |
|          | Utiliser la bande magnétique STD-301 (3 kHz) (APPAREIL II) | VR404 (Velocidad doble)<br>VR403 (Velocidad normal) | Ajuste de modo que lleguen a ser 6030 Hz. (Ponga en corto circuito TP401 y TP402 después de que el botón de PLAY ha sido presionado.)<br>Ajuste de modo que lleguen a ser 3015 Hz. (Presione PLAY SW. después de que el botón de PLAY ha sido presionado.) |

**2. Ajuste del transporte de la cinta**

| Modo   | Posición de ajuste                                     | Especificaciones  |
|--|--|---|
| Hacia delante  | Tornillo de ajuste del acimut de FWD.                  | Reproduzca 10 kHz a -20 dB con la cinta de prueba STD-331B  |
| Hacia atrás  | Tornillo de ajuste del acimut de REV.                  | Ajuste de modo que la señal de salida en las puntas de prueba individuales de TP1 y TP2 llegue al máximo. |
| Cargar un casete con espejo y levantar la base de las cabezas con la mano de modo que la cinta toque la guía de cinta. |  |   |
| STOP   | Tornillos de ajuste de la altura (izquierdo y derecho) | Comprobar (visualmente) que la cinta esté situada en el centro de la guía de cinta.                       |
| FWD PLAY   | Tornillo de ajuste de la altura de FWD.                | Ajustar la primera guía de cinta para asegurar que no hay desperfectos de la cinta.                       |
| REV PLAY   | Tornillo de ajuste de la altura de REV.                |   |

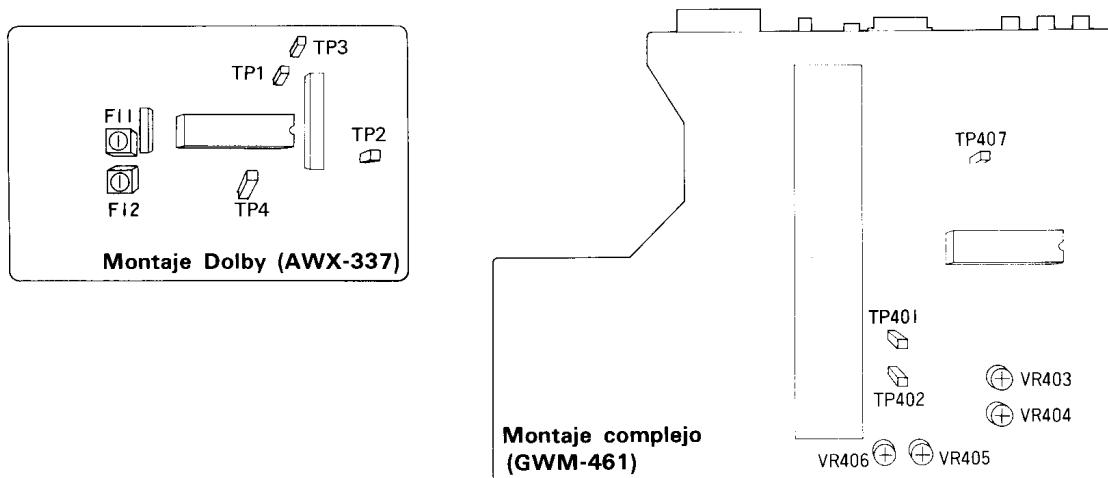

Fig. 13-1 Ajustamiento de la velocidad de cinta

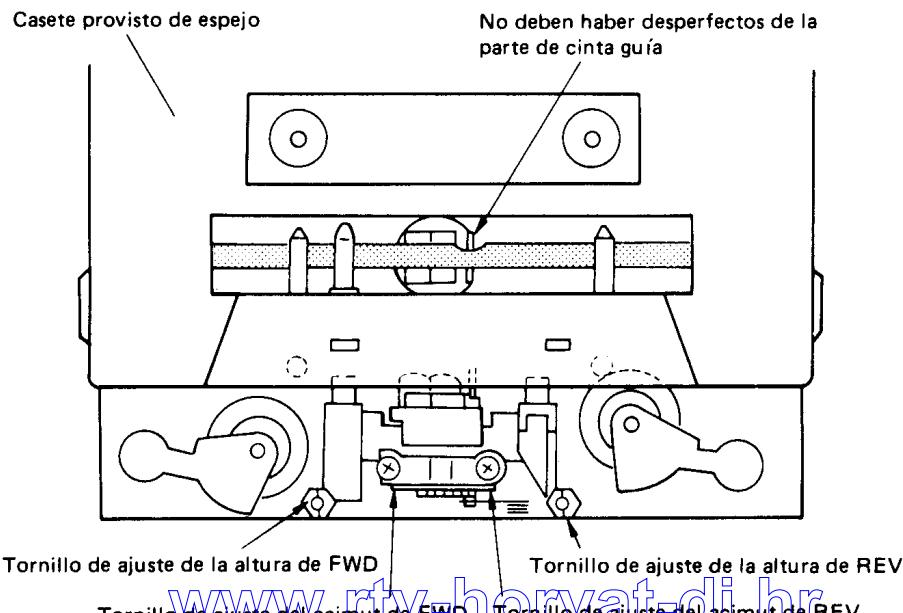

Fig. 13-2 Ajustamiento del pase de cinta

## 13.2 AJUSTES ELECTRICOS

### Condiciones de ajuste

- Los ajustes mecánicos deben terminarse primero.
- Limpiar y desimanar la cabeza de grabación.
- Dejar que el magnetófono se precaliente por unos minutos antes de iniciar los ajustes eléctricos.
- La señal de referencia es de 0dB=1Vrms.
- A menos que se especifique de otra manera, los siguientes interruptores deben estar en las posiciones indicadas:

DOLBY NR : OFF

### Cintas de prueba

STD-331B : Para ajustes de reproducción  
(Referirse a la (See Fig. 13-1))

STD-608A : Cinta NORMAL en blanco.

STD-620 : Cinta CrO<sub>2</sub> en blanco.

STD-610 : Cinta de METAL en blanco.

### Procedimientos de ajuste

#### Magnetófono I

- Ajuste del acimut de la cabeza.
- Ajuste del nivel de reproducción.

#### Magnetófono II

- Ajuste del acimut de la cabeza.
- Ajuste del nivel de reproducción.
- Respuesta en frecuencia de grabación/reproducción.
- Ajuste del nivel de grabación.

## 14. REMOTE CONTROL (AXD-015)

### SCHEMATIC DIAGRAM

1. RESISTORS:  
Indicated in  $\Omega$ : 1/4W, 1/6W and 1/8W,  $\pm 5\%$  tolerance unless otherwise noted; k:  $k\Omega$ , M:  $M\Omega$ , (F):  $\pm 1\%$ , (G):  $\pm 2\%$ , (K):  $\pm 10\%$ , (M):  $\pm 20\%$  tolerance

2. CAPACITORS:  
Indicated in capacity ( $\mu F$ )/voltage (V) unless otherwise noted; p:  $pF$ . Indication without voltage is 50V except electrolytic capacitor.

3. VOLTAGE, CURRENT:  
— : DC voltage (V) at no input signal Value in [ ] is DC voltage at rated power.  
 $\leftrightarrow$  mA: DC current at no input signal

4. OTHERS:  
→ : Signal route.  
◎ : Adjusting point.

The  $\triangle$  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

$\times$  marked capacitors and resistors have parts numbers.

The underlined indicates the switch position.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.

5. SWITCHES:

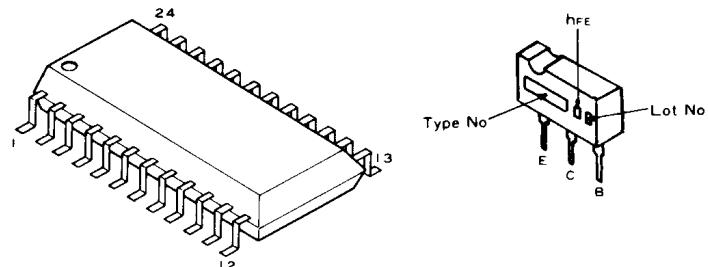

THE UNDERLINED INDICATES THE SWITCH POSITION

|      |                  |      |                     |

## ELECTRICAL PARTS LIST

### NOTES:

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

|      |                  |                         |
|------|------------------|-------------------------|
| 560Ω | $56 \times 10^1$ | 561 . . . . RD%PS 561 J |
| 47kΩ | $47 \times 10^3$ | 473 . . . . RD%PS 473 J |
| 0.5Ω | 0R5 . . . . .    | RN2H 0R5 K              |
| 1Ω   | 010 . . . . .    | RS1P 010 K              |

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

|        |                   |                         |
|--------|-------------------|-------------------------|
| 5.62kΩ | $562 \times 10^1$ | 5621 . . . RN%SR 5621 F |
|--------|-------------------|-------------------------|

- The **A** mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your Parts Stock Control, the fast moving items are indicated with the marks **★★** and **★**.
- **★★ GENERALLY MOVES FASTER THAN ★**  
This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.
- Parts marked by “**◎**” are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

### SEMICONDUCTORS

| Mark | Symbol & Description | Part No.   |
|------|----------------------|------------|
| ★★   | IC1                  | μPD6102G   |
| ★★   | Q1                   | 2SC2673R   |
| ★★   | Q2                   | 2SC2021LN  |
| ★    | D1 LED               | SE303A (Y) |
| ★    | D3—D7                | 1S2473     |

### CAPACITORS

| Mark   | Symbol & Description | Part No.    |
|--------|----------------------|-------------|
| C1     |                      | CEJA470M10  |
| C2, C3 |                      | CCDCH470J10 |

### RESISTORS

NOTE: When ordering resistors, convert the resistance value into code form, and then rewrite the part no. as before.

| Mark          | Symbol & Description | Part No.        |
|---------------|----------------------|-----------------|
| All resistors |                      | RD1/4PM □ □ □ J |

### OTHER

| Mark | Symbol & Description | Part No. |
|------|----------------------|----------|
| *    | X1 Ceramic resonator | CSD500EB |

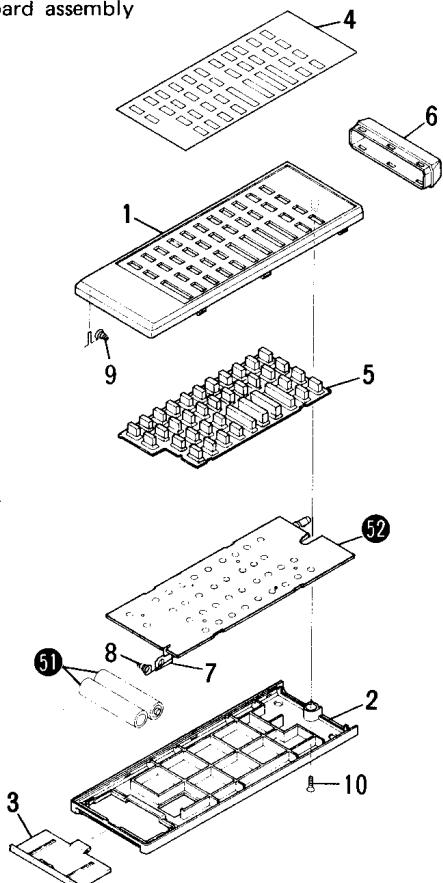

## EXPLODED VIEW AND PARTS LIST

## NOTES:

- Parts without part number cannot be supplied.
- The mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your Parts Stock Control, the fast moving items are indicated with the marks ★★ and ★.
- ★★ GENERALLY MOVES FASTER THAN ★  
This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.
- Parts marked by “◎” are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

## Part List

| Mark | No.          | Part No. | Description         |

| 35  | 49           | TUNER BAND SELECT          |
| 36  | 4A           | TUNER AM/FM FREQUENCY UP   |
| 37  | 4B           | AM/FM FREQUENCY DOWN       |
| 38  | 42           | CD STOP                    |
| 39  | 43           | CD PAUSE                   |
| 40  | 44           | CD PLAY                    |

| No. | Command Code | Description             |
|-----|--------------|-------------------------|
| 41  | 45           | CD TRACK SEARCH FORWARD |
| 42  | 46           | CD TRACK SEARCH REVERSE |

(No. merely serves as reference and is by no means related to the key arrangement in practice.)

Compo codes are all A6. Input to any Compo code other than above shall be sleeved with Co set to L.

As for keys of 7, 8, 23 to 42, data are re-transmitted after converted into compo code of corresponding component.

| No.     | Converted Compo Code |
|---------|----------------------|
| 7, 8    | A3                   |
| 23 — 37 | A4                   |
| 38 — 42 | A2                   |

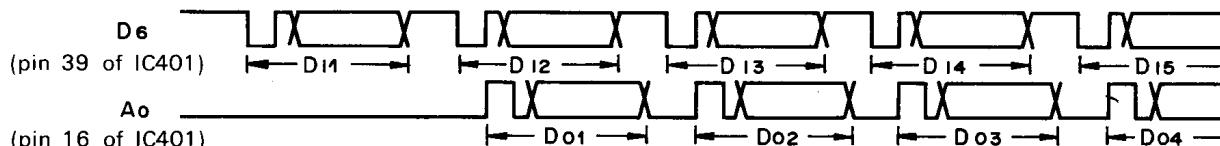

Also, the equipment is provided with AUTO FUNCTION thereby the function is modified by means of the following keys:

| No.                | Function |
|--------------------|----------|
| 13, 15, 17, 20, 21 | TAPE     |
| 40                 | CD       |
| 23 — 37            | TUNER    |
| 8                  | PHONO    |

FUNCTION cannot be modified during the DECK-II recording. Also, KEY No.17 turns the FUNCTION display to "PROGRAM".

### Remote control data re-transmission

If data D11 received should be re-transmitted, and after the D12 reader portion is detected, D11 is converted and data D02, D03, ..., which are the same as D01 which is a conversion of D11, are kept transmitted.
