

Service Manual

SX-SW404

ORDER NO.
RRV3336

AUDIO MULTI-CHANNEL RECEIVER SUBWOOFER

SX-SW404

SX-SW606

SX-X360

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Model	Type	Power Requirement	Remarks
SX-SW404	WYXCN5	AC220-240V	
SX-SW606	WYXCN5	AC220-240V	
SX-X360	WYXCN5	AC220-240V	
SX-X360	WVXCN5	AC220-240V	
SX-X360	KUCXCN	AC120V	

- Ask users to bring both subwoofer and the display unit together when servicing.

For details, refer to "Important Check Points for Good Servicing".

1234

SAFETY INFORMATION

A

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

B

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 – Proposition 65

C

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.
Please be sure to confirm and follow these procedures.

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification (addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris. Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs. In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages. If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries. Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification. Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance. Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

2. EXPLODED VIEWS AND PARTS LIST

- NOTES:**
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
 - The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - Screws adjacent to ▼ mark on product are used for disassembly.
 - For the applying amount of lubricants or glue, follow the instructions in this manual.
(In the case of no amount instructions, apply as you think it appropriate.)

4. PCB CONNECTION DIAGRAM

NOTE FOR PCB DIAGRAMS :

1. Part numbers in PCB diagrams match those in the schematic diagrams.
2. A comparison between the main parts of PCB and schematic diagrams is shown below.

Symbol In PCB Diagrams	Symbol In Schematic Diagrams	Part Name
		Transistor
		Transistor with resistor
		Field effect transistor
		Resistor array
		3-terminal regulator

3. The parts mounted on this PCB include all necessary parts for several destinations.
For further information for respective destinations, be sure to check with the schematic diagram.
4. View point of PCB diagrams.

SIDE B

F POWER SUPPLY UNIT

NOTES: ●Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
●The ⚠ mark found on some component parts indicates the importance of the safety factor of the part.
Therefore, when replacing, be sure to use parts of identical designation.
●When ordering resistors, first convert resistance values into code form as shown in the following examples.
Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).
560 Ω → 56 x 10¹ → 561 RD1/4PU561J
47k Ω → 47 x 10³ → 473 RD1/4PU473J
0.5 Ω → R50 RN2H R50K
1 Ω → 1R0 RS1P 1R0K
Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).
5.62k Ω → 562 x 10¹ → 5621 RN1/4PC5621F
●Meaning of the figures and others in the parentheses in the parts list.
Example) IC 301 is on the point (face A, 91 of x-axis, and 111 of y-axis) of the corresponding PC board.
IC 301 (A, 91, 111) IC NJM2068V

7. GENERAL INFORMATION

7.1 DIAGNOSIS

7.1.1 TEST MODE

1. Conditions During Test Mode

- During Test mode, the unit will not be shut down for an emergency even if one of the failures mentioned below occurs.
- After the unit has been shut down in Normal mode for an emergency upon detection of one of the failures mentioned below, you can turn it on immediately, without waiting for one minute, in Test mode.

2. How to enter Test mode

- Immediately after the power is turned off (within 5 seconds after the "-OFF-" indication goes dark), simultaneously hold the AUDIO INPUT and STANDBY/ON keys on the Display unit pressed for more than 3 seconds.
- Test mode can also be entered in either of the following ways:
 1. Connect the power cord to the wall outlet with the STEST port (microcomputer terminal IC5501: 43-pin) at High (5 V). (See "Test mode connecting point".)
 2. Connect the power cord to the wall outlet while holding both the AUDIO INPUT and STANDBY/ON keys on the Display unit pressed.

Note: If the power cord was disconnected immediately before, be sure to wait at least one minute before turning on the power in the manner mentioned above. Otherwise, the unit may not operate properly.

3. How to quit Test mode, and conditions for quitting

- To quit Test mode, press STANDBY/ON key and turn the power off.
- When Test mode is quit, only data on failure in RAM will be initialized, and data on user settings in RAM will not be initialized.

4. Indications on the FL display when Test mode is entered

- The function setting will be COAXIAL input.
- The indication on the FL display when Test mode is entered will differ depending on whether the unit was shut down normally or with an abnormality detected, as shown below:
- ADV mode will become 5-channel STEREO so that multichannel output can be obtained.

[After a normal power-off]

FL display C O A S E R V

5. Operations during Test Mode

- Basically, operations in Test mode are the same as in Normal mode. However, to indicate that the unit is in Test mode, the following are displayed when the functions are changed:

[Functions]

• SX-SW404, SX-SW606

TUNER
DVD/DVR1
DVD/DVR2
DIGITAL
ANALOG

• SX-X360 (All Destination)

TUNER
DVD/DVR
XBOX 360
DIGITAL
ANALOG

C O A S E R V
O P 1 S E R V
O P 2 S E R V
A N A S E R V

6. Failures

- Depending on the types of errors, one of the following error messages will be displayed when the unit is turned on:

E E P E R R

1. Breakage or short-circuiting of the communication line to the EEPROM can be suspected.
2. A failure in the EEPROM can be suspected.

O C E R R O R

- If "OC ERROR" is not displayed when the unit is turned on in Normal mode, short-circuiting of the speaker terminals can be suspected.
- If "OC ERROR" is displayed again when the unit is turned on in Normal mode, the following causes can be suspected:
 1. One or more of the ICs among the three digital amplifier ICs (IC3201, IC3301, and IC3401: TAS5142DDV) on the MAIN Assy is in failure.
 2. The line between one of the above digital amplifier ICs and the speaker terminals is short-circuited.
 3. The SHUTDOWN line from one of the above digital amplifier ICs to the system-control IC (PDC135A) is short-circuited by grounding or is broken.
 4. The voltage at VS+12 is low (less than 10 V).
 5. (In a case when an error claimed by the customer could not be duplicated) The customer let the volume of the speakers increase when two poles of the speaker cable had been short-circuited.
 6. (In a case when an error claimed by the customer could not be duplicated) The customer let the conductor of the speaker cable touch the chassis of the main unit.

O V E R T E M P

- If "OVERTEMP" is not displayed when the unit is turned on in Normal mode, the unit is normal. (It might be caused by a temporary temperature rise.)
- If "OVERTEMP" is displayed again when the unit is turned on in Normal mode, the following causes can be suspected:
 1. One or more of the ICs among the three digital amplifier ICs (IC3201, IC3301, and IC3401: TAS5142DDV) on the MAIN Assy is in failure.
 2. The XOTW line from one of the above digital amplifier ICs to the system-control IC (PDC135A) is short-circuited by grounding or is broken.
 3. Inappropriate installation of the heat sink (loose screws, failure to apply silicon grease, etc.)

7. DSP error display

- Each time the SOUND key on the remote control unit is pressed while the power is on in Test mode, the DSP error display and the normal display are alternately switched.

8. Accumulated power-on time display and speaker setting display

- You can check the accumulated power-on time and speaker settings by holding the AUDIO INPUT key on the Display unit pressed for more than 8 seconds while the power is on in Test mode. While the key is held pressed, the accumulated power-on time indication and speaker-setting indication are alternately displayed for 3 seconds each.

Speaker-setting display

T A L L - 1

At intervals of 3 seconds

Accumulated power-on time display

1 0 H 3 0 M

- Power-on time is always counted while the power is on, regardless of unit's functions and operations. However, it is not counted during Standby mode.
- The maximum countable power-on time is 255H59M (255 hours 59 minutes.) The indication will not advance beyond that.
- The accumulated power-on time basically cannot be cleared.

Test Mode connecting point

A MAIN ASSY **SIDE B**

Connecting point

1. Overview

Several types of speakers are planned to be used with this product, and according to speaker type, the sound-quality parameters to be sent to the Digital Amplifier section are different. Since the parameters for the planned speaker types have been written in the EEPROM, by simply selecting the speaker type, as shown below, speaker setting is completed.

2. How to select the settings

• Except SX-X360 (XBOX model)

- While holding the VOL+ and STANDBY/ON keys on the Display unit pressed, connect the power cord to the wall outlet.
Note: If the power cord was disconnected immediately before, be sure to wait at least one minute before turning on the power in this way. Otherwise, the unit may not operate properly.
Or, Immediately after the power is turned off (within 5 seconds after the "-OFF-" indication goes dark), simultaneously hold the VOL+ and STANDBY/ON keys on the Display unit pressed for more than 3 seconds.
- The power comes on; then the following indication appears.

SP TYPE

- Press the key corresponding to the speaker to be used to determine the setting. The power will automatically be turned off.

VOL- key
VOL+ key
AUDIO INPUT key
SURROUND key
STANDBY/ON key

	R	E	G	U	L	A	R
	T	A	L	L	-	1	
	T	A	L	L	-	2	
	A	V	R	A	C	K	

For Japan model
Not used : Flashing

Note: Be sure to select the setting corresponding to the model number of the speaker. (See the table below.)

Destination	Model Number	Speaker setting
Europe (Continent)	SX-SW404/WYXCN5	REGULAR
	SX-SW606/WYXCN5	TALL-1
Europe (UK)	SX-SW505HX/WVXCN5	REGULAR
North America	SX-SW260/KUCXCN	REGULAR
	SX-SW560/KUCXCN	TALL-1
General	SX-SW303/WLPWXCN	REGULAR
	SX-SW505/WLPWXCN	TALL-1

For reference

• SX-X360 (XBOX model) only

No setting is required. After the power cord is plugged in, "XBOX" is automatically set.

Destination	Model Number	Speaker setting
Europe	SX-X360/WYXCN5, WVXCN5	XBOX
North America	SX-X360/KUCXCN	XBOX

3. How to confirm the speaker setting

- While holding the AUDIO INPUT and STANDBY/ON keys on the Display unit pressed, connect the power cord to the wall outlet.
Note: If the power cord was disconnected immediately before, be sure to wait at least one minute before turning on the power in this way. Otherwise, the unit may not operate properly.
Or, in the standby mode, simultaneously hold the VOL+ and STANDBY/ON keys on the Display unit pressed for more than 3 seconds.
- Enter Test mode.
- Hold the AUDIO INPUT key pressed for more than 8 seconds.
- The setting is displayed.

TALL-1

If no setting has been written in the EEPROM, "UNKNOWN" is displayed.

UNKNOWN

4. Error indication

When the unit is turned on without any speaker setting, a warning "NO SPTYP" will be displayed. Even with this warning displayed, all key operation is possible. After a key operation, the display will return to this warning indication.

NO SPTYP

A

• Specification of DSP error display

B

Example)

DIR ERR	D I E R - U M	Data cannot be received from DIR. → DIR is assumed to be in failure.
DSP ERR	D S E R - U M	Data cannot be received from DSP. → Communication between DIR and DSP is in failure. → DSP is assumed to be in failure.
HREQ ERR	H R E Q - U M	No value is returned from HREQ. → DSP is assumed to be in failure.
DSP NG	D S N G - U M	There are DSP error data. → Communication between DIR and DSP is in failure. → DSP is assumed to be in failure.
DMUTE ON	D M U T - M	DECMUTE is always activated. → Communication between DIR and DSP is in failure. → DSP is assumed to be in failure.
NO ERR (The source is 88.2/96kHz.)	D S O K - 9	96-kHz source data are being played back. (No abnormality)
NO ERR (The source is not 88.2/96kHz.)	D S O K -	No abnormality

- C
- DSP error message mode
- D
- Press the "SOUND" key in test mode, to select the mode that DSP error messages are displayed.
Press the "SOUND" key again to return to the normal test mode display.
For this reason, the usual function of "SOUND" does not work in the test mode.

7.1.4 CIRCUIT DESCRIPTION OF DIGITAL AMP. SECTION

PWM Processor section

The PCM signals output from the DSP are input to this section, and their volume and sound quality are digitally adjusted. At the output stage, after conversion from PCM to PWM, the signals are output to the Power stage.

Power Stage section

In this section, timing is controlled so that the MOSFETs on the high and low sides will not be turned on simultaneously. The voltage of the PWM signals are raised to drive the gates of the MOSFET, and the PWM signals to drive the speakers are output from the MOSFET at the output stage. Detection and protection functions against short-circuiting of the output signals and temperature exceeding the standard value are also provided.

If the detection and protection work, the ports of the power stage ICs become the following state.

Power Stage ICs No.	Protection Enable State
IC3201	/SD (5pin) ⇒ L
IC3301	
IC3401	/OTW (2pin) ⇒ L

Output LPF section

The carrier elements, high-frequency signals that are unnecessary for these speakers, are eliminated. The signals passed through the LPF will become sine-wave signals, as shown in the figure above.

Attention :

As a signal to drive the BTL is output from the negative speaker terminal, DO NOT short-circuit between the negative speaker terminal and ground, such as the chassis.

Do not short-circuit between the plus speaker terminal and ground, such as the chassis, too.

7.1.5 SPECIFICATIONS FOR THE PROTECTION CIRCUITS FOR THE DIGITAL AMPLIFIER

The protection circuits for the Digital Amplifier are activated, following the specifications shown below. The error indication on the FL display shows the reason a protection circuit was activated.

Upon diagnosis of the Digital Amplifier, refer to the specifications for the protection circuits here and the overview of the Digital Amplifier circuitry.

1. Overview

The system microcomputer monitors the ports for shutdown requests (Pin 5 : /SD) and the ports for abnormal-temperature detection (Pin 2 : /OTW) of the Power Stage ICs (IC3201, IC3301, and IC3401). As soon as any abnormality is detected, it shuts the unit down.

To notify the user of the possibility of a too high a volume, when the unit is turned on the next time, the volume level will be set to 0, and an error message will be displayed on the FL display.

2. Ports on the system microcomputer to be used for detection

Pin 77: SHUTDOWN

Low voltage at this pin means overcurrent at the Power Stage ICs or that the power supply voltage for the gate drive for the Power Stage ICs (= GVDD, Pins 1, 22, 23, and 24), i.e., VS+12 is less than 10 V.

Pin 79: XOTW

Low voltage at this pin means the temperature at the Power Stage ICs exceeded 125°C.

Note: As one Power Stage IC is provided with two channels, three Power Stage ICs (in total 6 channels) are mounted in this unit. For abnormality detection, the unit implements a logical OR operation regarding these three ICs.

Therefore, which IC is abnormal cannot be known directly. To find which IC is abnormal, it is required to check whether abnormality detection is activated or not with the abnormality detection port of each IC open (by temporarily removing a series resistor (IC3201:R3201, R3202, IC3301:R3301, R3302, IC3401:R3401, R3402)).

3. Detection timing

Start : Detection starts 500 ms after the PWRCONT port (Pin 84) of the system microcomputer becomes active by your pressing the STANDBY/ON key.

Finish : When the STANDBY/ON key is pressed again (when the power-off process starts).

4. Operation of the protection circuits

The following three protection circuits are activated when the conditions shown below are met:

Overcurrent detection: Indication on the FL display: OC ERROR

Conditions: If the SHUTDOWN ports, which are monitored every 10 ms, become low 7 times in succession.

Abnormal temperature detection 1: Indication on the FL display: OVERTEMP

Conditions: If the XOTW ports, which are monitored every 10 ms, become low in succession for one minute.

Abnormal temperature detection 2: Indication on the FL display: OVERTEMP

(Prerequisite: The XOTW ports, which are monitored every 10 ms, become low three times in succession.)

Conditions: The above prerequisite is upheld, and the conditions for an overcurrent detection are met.

5. Process when the protection circuits are activated

The unit is shut down within 30 ms after abnormality detection then the volume level is set to 0. The unit can be turned on immediately after the shutdown.

7.1.6 CONDITIONS FOR SWITCHING THE ROTATION SPEED OF THE FAN

A fan is provided with this unit. Its rotation speed can be switched between low and high under the following conditions.

1. Conditions for switching the rotation speed from low to high

In a case where an audio signal is input and the main volume becomes VOL 20 or more

- The rotation speed is not switched to high immediately after the main volume becomes VOL 20 but with a delay of 30 seconds.
- If a digital audio signal is not input, the rotation speed is not switched to high even if the main volume becomes VOL 20 or more.
- If the function is ANALOG IN (AUX), even if there is no audio signal input, 30 seconds after the main volume becomes VOL 20 or more, the rotation speed is switched to high.

2. Conditions for switching the rotation speed from high to low

- If the main volume becomes less than VOL 20
- During muting
- If a digital audio signal is not input
- If DIR IC has gone to an unlocking state, such as during function selection or surround selection

Note: The rotation speed is immediately switched to low when one of the above conditions is met.

3. Fan drive circuit and drive voltage

The fan drive circuit and the drive voltages at low/high rotation speed are shown below:

	Power	Voltage (V)
Low speed, no digital stream signal (except when the function setting is ANALOG IN)	VSF+12	12.9
	VFSAN	7.1
Low speed, with audio input, with VOL 19 or less	VSF+12	14.3
	VFSAN	7.2
High speed, with VOL 20 or more	VSF+12	14.2
	VFSAN	11.3

Note: The above voltage values are references. They differ from product to product.

Compatibility among the SX-SW77 series, SX-SW404 series, and SX-X360

● About compatibility among the SX-SW77 series (SW receiver I), SX-SW404 series (SW receiver II), and SX-X360 (SW receiver II, XBOX model)

All the above-mentioned models comprises of the Main unit and the Display unit. For a case in which either component is brought to a service station by a customer, the service station must be provided with the SX-SW77 series model (SW receiver I) to be used for servicing. The SX-X360 is not provided for servicing.

As for the SX-SW404 series (SW receiver II,) the successor model of SX-SW77 series, the display is the same as that for the SX-SW77 series. So, there is a full compatibility between them.

A blue LED is added to the display of the SX-X360.
See below for compatibility and what should be noted for the SX-X360:

Component to be repaired	Unit to be used for servicing	Speaker settings
SX-X360 Display unit	SX-SW77 series Main unit	• No problem for connection • Check if the blue LED on the Display unit of the SX-X360 always lights. → If it does not, the LED itself or the lighting circuit for the LED on the Display unit is defective. • A failure in the Display unit can be diagnosed with the combination of these units.
SX-X360 Main unit	SX-SW77 series Display unit	• No problem for connection • Diagnosis is impossible for failure of the blue LED on the Display unit of the SX-X360 (not lit). → Because the lighting circuits for the LED are on both the Main unit and Display unit, a failure point cannot be diagnosed only with the Main unit. • A failure in the Main unit, other than of the blue LED, can be diagnosed with the combination of these units.

● Model numbers of the SX-SW77 series and SX-SW404 series

SX-SW77 series (SW receiver I)	SX-SW404 series (SW receiver II)
SX-SW77 SX-SW55	SX-SW404 SX-SW606
Reference model	Reference model
SX-SW950	SX-SW505HX SX-SW260 SX-SW560
SX-SW100	SX-SW303 SX-SW505
SX-E230 SX-06SW	SX-SW707 SX-07SW

Note: Even if the unit shown in the photos and illustrations in this manual may differ from your product, the procedures described here are common.

1 DISPLAY Unit (AXX7204)

- ① Remove the two screws.
- ② Remove the one screw.
- ③ Remove the display cover.

● Rear view

- ④ Remove the three screws.
- ⑤ Unhook the two hooks.
- ⑥ Remove the FL and CONNECT Assys.

● Rear view

2 DISPLAY Unit (AXX7212)

- ① Unhook the two hooks.
- ② Unhook the two hooks.
- ③ Remove the stand.

● Rear view

- ④ Remove the six screws.
- ⑤ Remove the one screw.
- ⑥ Remove the display cover.

● Rear view

Display cover

3 Cosmetic Baffle

- ① Insert a thin slot screwdriver into the gap between the cosmetic baffle and main housing and gently pry the baffle away.

Note: To avoid damage, alternately pry at two points, as shown in the photo below, little by little, not in a single motion.

● Bottom view

- ② Remove the cosmetic baffle.

4 Speaker

- ① Remove the four screws.
② Remove the speaker.

● Rear view

- ③ Disconnect the connection cord.

5 Main Section

- ① Remove the four screws.

● Bottom view

- ② Disconnect the connection cord.
③ Remove the two screws.
④ Pull out the Main Section.

● Rear view

- ⑤ Remove the three screws.

● Rear view

- ⑥ Remove the seven screws.
⑦ Remove the chassis T with rear panel SW by unhooking the two hooks.

Rear panel SW

⑧ Connect the DISPLAY Unit.

47	PWM_P_4	DO	PWM 4 output (differential +)
48	VR_PWM	P	Voltage reference for digital PWM core supply 1.8V
49	PWM_M_7	DO	PWM 7 (Line out L) output (differential –)
50	PWM_P_7	DO	PWM 7 (Line out L) output (differential +)

F

No.	Pin Name	I/O	Pin Function
51	PWM_M_8	DO	PWM 8 (Line out R) output (differential -)
52	PWM_P_8	DO	PWM 8 (Line out R) output (differential +)
53	DVSS_PWM	P	Digital ground for PWM
54	DVDD_PWM	P	3.3V digital power supply for PWM
55	PWM_M_5	DO	PWM 5 output (differetil -)
56	PWM_P_5	DO	PWM 5 output (differetil +)
57	PWM_M_6	DO	PWM 6 output (differetil -)
58	PWM_P_6	DO	PWM 6 output (differetil +)
59	PWM_HPML	DO	PWM left channel headphone (differential -)
60	PWM_HPPL	DO	PWM left channel headphone (differential +)
61	PWM_HPMR	DO	PWM right channel headphone (differential -)
62	PWM_HPPR	DO	PWM right channel headphone (differential +)
63	MCLK	DI	MCLK is a 3.3V clock master clock input
64	RESERVED	–	Connect to digital ground

Note of types : A = analog, D = 3.3V digital, P = power/ground/decoupling, I = input, O = output

● Pin Function

No.	Pin Name	I/O	Pin Function
1	GVDD_B		Gate-drive voltage supply requires 0.1-μF capacitor to AGND
2	OTW	O	Overtemperature warning signal, open-drain, active-low
3,4	NC	–	No connect. Pins may be grounded.
5	SD	O	Shutdown signal, open-drain, active-low
6	PWM_A	I	Input signal for half-bridge A
7	RESET_AB	I	Reset signal for half-bridge A and half-bridge B, active-low
8	PWM_B	I	Input signal for half-bridge B
9	OC_ADJ	O	Analog overcurrent programming pin requires resistor to ground
10	GND		Ground
11	AGND		Analog ground
12	VREG		Digital regulator supply filter pin requires 0.1-μF capacitor to GND.
13	M3	I	Mode selection pin
14	M2	I	Mode selection pin
15	M1	I	Mode selection pin
16	PWM_C	I	Input signal for half-bridge C
17	RESET_CD	I	Reset signal for half-bridge A and half-bridge B, active-low
18	PWM_D	I	Input signal for half-bridge D
19,20	NC	–	No connect. Pins may be grounded.
21	VDD		Power supply for digital voltage regulator requires 0.1-μF capacitor to GND.
22	GVDD_C		Gate-drive voltage supply requires 0.1-μF capacitor to AGND
23	GVDD_D		Gate-drive voltage supply requires 0.1-μF capacitor to AGND
24	BST_D		HS bootstrap (BST), external capacitor to OUT_D required
25	NC	–	No connect. Pins may be grounded.
26,27	PVDD_D	–	Power supply input for half-bridge D requires close decoupling of 0.1-μF capacitor to GND_D
28	OUT_D	O	Output, half-bridge D
29	GND_D		Power ground for half-bridge D
30	GND_C		Power ground for half-bridge C
31	OUT_C	O	Output, half-bridge C
32	PVDD_C		Power supply input for half-bridge D requires close decoupling of 0.1-μF capacitor to GND_D
33	BST_C		HS bootstrap supply (BST), external capacitor to OUT_C required
34	BST_B		HS bootstrap supply (BST), external capacitor to OUT_B required
35	PVDD_B		Power supply input for half-bridge B requires close decoupling of 0.1-μF capacitor to GND_B
36	OUT_B	O	Output, half-bridge B
37	GND_B		Power ground for half-bridge B
38	GND_A		Power ground for half-bridge A
39	OUT_A		Output, half-bridge A
40,41	PVDD_A		Power supply input for half-bridge A requires close decoupling of 0.1-μF capacitor to GND_A
42	NC	–	No connect. Pins may be grounded.
43	BST_A		HS bootstrap supply (BST), external capacitor to OUT_A required
44	GVDD_A		Gate-drive voltage supply requires 0.1-μF capacitor to AGND

D

- Port0 (P00-P07) can be selected for input or output by each 4 bits (P00-P03,P04-P07). Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- Port1 (P10-P17) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1bit in option.
- Port2 (P20-P27) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- Port3 (P30-P36) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- Port7 (P70-P73) can be selected for input or output by each 1 bit. Set for input when reset.
- Port8 (P80-P87) can be selected for input or output by each 1 bit. Set for input when reset.
- PortA (PA0-PA5) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- PortB (PB0-PB7) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- PortC (PC0-PC7) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- PortE and PortF can be selected for input or output by each 2 bits.
- In case of without RDS, it is best that RDSDATA and RDSCLK are assigned as I/O port which can be set output and output low level.

Rear Panel (Receiver subwoofer)

Remote control (SX-SW404, SX-SW606)

Important

- Functions printed in green on the remote control are accessed by switching the **MAIN/SUB** switch to **SUB**.

1 **RECORDER**

Press to switch the recorder on or into standby.

2 **RECEIVER**

Press to switch the receiver subwoofer on or into standby.

3 **Input select buttons**

HDD/DVD

Press to select the hard disk (HDD) or DVD for recording or playback. The receiver subwoofer's audio input is also switched to **DVD/DVR1**.¹

FM/AM

Press to select the built-in radio tuner.

AUDIO IN

Press repeatedly to select one of the receiver subwoofer's audio inputs (**DVD/DVR1**, **DVD/DVR2**, **DIGITAL** or **ANALOG**).

Note

¹ If the recorder is set to remote mode 2 or 3, the receiver subwoofer's audio input will not be switched. See also Remote Control Mode.

4 **SOUND RETRIEVER**

Press to restore CD quality sound to compressed audio sources.

5 **Playback controls**

PAUSE

Press to pause playback or recording.

PLAY

Press to start playback.

STOP

Press to stop playback.

6 **Recording controls**

REC

Press to start recording. Press repeatedly to set the recording time in blocks of 30 mins.

When the red action button is visible in a **GUIDE Plus+™** screen, use for One-Button-Record.

STOP REC

Press to stop recording.

7 **INFO**

Press to see additional information for the highlighted item in **GUIDE Plus+™**.

8 **HELP**

Press for help on how to use the current GUI screen.

9 **DISC NAVIGATOR / TOP MENU**

Press to display the Disc Navigator screen, or the top menu if a DVD-Video or finalized DVD-R/RW (Video) disc is loaded.

10 **GUIDE**

Press to display the **GUIDE Plus+δ** screen; press again to exit.

11 **HOME MENU**

Press to display the Home Menu, from which you can navigate many the functions of the system.

12 **↑/↓/←/→ (cursor buttons) and ENTER**

Use to navigate all DVD recorder on-screen displays. Press **ENTER** to select the currently highlighted option.

CHANNEL +/-

Press to change the channel of the built-in TV tuner.

CM BACK (commercial back)

Press repeatedly to skip progressively backward through the audio or video playing.

CM SKIP (commercial skip)

Press repeatedly to skip progressively forward through the audio or video playing.

13 PAUSE LIVE TV

Press to start recording the current TV channel, but with playback paused, effectively pausing the broadcast.

14 RETURN

Press to go back one level in the on-screen menu or display.

15 ◀◀PREV / NEXT ▶▶

Press to skip to the previous or next title/chapter/track/folder; or to display the previous or next menu page.

When GUIDE Plus+TM is displayed, use to display the previous/next page.

16 VOLUME +/-

Use to adjust the volume.

17 GUIDE Plus+TM Action buttons and DVD playback function buttons

When in the GUIDE Plus+TM system, these buttons act as the Red, Green, Yellow and Blue Action buttons (the functions of these buttons change according to the GUIDE Plus+TM Area).

AUDIO

Press to change the audio language or channel. (When the recorder is stopped, press to change the tuner audio.)

SUBTITLE

Press to display/change the subtitles included in multilingual DVD-Video discs.

ANGLE

Press to switch camera angles on discs with multi-angle scenes.

PLAY MODE

Press to change the play mode (search, repeat, program play, etc.)

18 TIMER REC

Press to set a timer recording from the GUIDE Plus+TM system.

19 ◀◀ / ▶▶

Press to start reverse or forward scanning. Press again to change the speed.

◀◀◀ / ◀◀, ▶▶ / ▶▶▶

While paused, press and hold to start slow-motion playback. Press repeatedly to change the playback speed.

While paused, press to advance a single frame in either direction.

When GUIDE Plus+TM is displayed, use to display the previous/next day.

20 REC MODE

Press repeatedly to change the recording mode (picture quality).

21 ONE TOUCH COPY

Press to start One Touch Copy of the currently playing title to DVD or the HDD.

22 Number buttons

Use the number buttons for track/chapter/title selection; channel selection, and so on. The same buttons can also be used to enter names for titles, discs and so on.

↑/↓/◀/▶ (cursor buttons) and ENTER

Use to control receiver functions.

SETUP

Use to access the menu system for surround sound setup, tuner settings and so on.

SR+

Use to setup the SR+ features and to select the SR+ mode.

MCACC

Starts the Auto MCACC setup.

TEST TONE

Use to output the test tone (for speaker setup)

SURROUND

Use to select a Surround mode.

SLEEP

Press to set the sleep timer.

ADVANCED

Use to select an Advanced Surround mode.

SOUND

Press to access the sound menu, from which you can adjust bass and treble, etc.

CLEAR

Press to clear an entry and start again.

23 MENU

Press to display the disc menu if a DVD-Video, finalized DVD-R/-RW or finalized DVD+R/+RW disc is loaded.

When in the GUIDE Plus+TM system, use to jump directly to the Menu bar.

24 VIDEO IN

Press to change the DVD recorder input for recording and playback.

25 TV/DVD

Press to switch between 'TV mode', in which you get the picture and sound from the TV's tuner, and 'DVD mode', in which you get picture and sound from the system's tuner (or an external input).

26 JUKEBOX**27 TV CONTROL**

After setting up, use these controls to control your TV.

28 DISPLAY

Displays/changes the on-screen information displays.

RDS DISP

Changes RDS displays

29 MAIN/SUB

Change from **MAIN** to **SUB** to access the green functions/commands on the remote.
