AUDIO MULTI-CHANNEL RECEIVER SUBWOOFER

SX-SW77

SX-SW55

SX-SW950

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Model	Type	Power Requirement	Remarks
SX-SW77	WYXCN	AC220-240V	
SX-SW77	WVXCN	AC220-240V	
SX-SW55	WYXCN	AC220-240V	
SX-SW55	WVXCN	AC220-240V	
SX-SW950	KUXCN	AC120V	

For details, refer to "Important Check Points for Good Servicing".

1234

SAFETY INFORMATION

A

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

B

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 – Proposition 65

C

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.
Please be sure to confirm and follow these procedures.

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification (addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.
Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.
In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.
If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.
Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.
Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

2. EXPLODED VIEWS AND PARTS LIST

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

● The  mark found on some component parts indicates the importance of the safety factor of the part.

Therefore, when replacing, be sure to use parts of identical designation.

● Screws adjacent to ▼ mark on product are used for disassembly.

● For the applying amount of lubricants or glue, follow the instructions in this manual.

(In the case of no amount instructions, apply as you think it appropriate.)

5. PCB PARTS LIST

NOTES: ●Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
●The ⚠ mark found on some component parts indicates the importance of the safety factor of the part.
Therefore, when replacing, be sure to use parts of identical designation.
●When ordering resistors, first convert resistance values into code form as shown in the following examples.
Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).
560 Ω → 56 x 10¹ → 561 RD1/4PU561J
47k Ω → 47 x 10³ → 473 RD1/4PU473J
0.5 Ω → R50 RN2H R50K
1 Ω → 1R0 RS1P 1R0K
Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).
5.62k Ω → 562 x 10¹ → 5621 RN1/4PC5621F

6. ADJUSTMENT

There is no information to be shown in this chapter.

7. GENERAL INFORMATION

7.1 DIAGNOSIS

7.1.1 TEST MODE

1. Conditions During Test Mode

- During Test mode, the unit will not be shut down for an emergency even if one of the failures mentioned below occurs.
- After the unit has been shut down in Normal mode for an emergency upon detection of one of the failures mentioned below, you can turn it on immediately, without waiting for one minute, in Test mode.

2. How to enter Test mode

- During Standby mode, hold the AUDIO INPUT and STANDBY/ON keys on the Display unit pressed for 3 seconds.
- Test mode can also be entered in either of the following ways:
 1. Turn on the power with the STEST port (microcomputer terminal IC5501: 43-pin) at High (5 V). (See "Test mode connecting point".)

2. Turn on the power while holding both the AUDIO INPUT and STANDBY/ON keys on the Display unit pressed.

Note: If the power cord was disconnected immediately before, be sure to wait at least one minute before turning on the power in the manner mentioned above. Otherwise, the unit may not operate properly.

3. How to quit Test mode, and conditions for quitting

- To quit Test mode, turn the power off to turn the power off.
- When Test mode is quit, only data on failure in RAM will be initialized, and data on user settings in RAM will not be initialized.

4. Indications on the FL display when Test mode is entered

- The function setting will be DVD/DVR1.
- The indication on the FL display when Test mode is entered will differ depending on whether the unit was shut down normally or with an abnormality detected, as shown below:
- ADV mode will become 5-channel STEREO so that multichannel output can be obtained.

[After a normal power-off]

[After a shutdown caused by high-temperature detection]

FL display O V E R T E M P
 ↓
FL display V O L 0
 ↓
FL display D V 1 S E R V

5. Operations during Test Mode

- Basically, operations in Test mode are the same as in Normal mode. However, to indicate that the unit is in Test mode, the following are displayed when the functions are changed:

• Excepting North America

[Functions]	[FL display]
DVD/DVR1	D V 1 S E R V
DVD/DVR2	D V 2 S E R V
DIGITAL	D I G S E R V
ANALOG	A N A S E R V
FM/AM	T X S E R V

• North America

[Functions]	[FL display]
DVD	D V D S E R V
DTV	D T V S E R V
PC/GAME	P C S E R V
AUX	A U X S E R V
TUNER	T X S E R V

6. Failures

- Depending on the types of errors, one of the following error messages will be displayed when the unit is turned on:

EEP ERR

1. Breakage or short-circuiting of the communication line to the EEPROM can be suspected.
2. A failure in the EEPROM can be suspected.

OC ERROR

- If "OC ERROR" is not displayed when the unit is turned on in Normal mode, short-circuiting of the speaker terminals can be suspected.
- If "OC ERROR" is displayed again when the unit is turned on in Normal mode, the following causes can be suspected:
 1. One or more of the ICs among the three digital amplifier ICs (IC3201, IC3301, and IC3401: TAS5122DCA) on the MAIN Assy is in failure.
 2. The line between one of the above digital amplifier ICs and the speaker terminals is short-circuited.
 3. The XSD line from one of the above digital amplifier ICs to the system-control IC (PDC128A) is short-circuited by grounding or is broken.

OVERTEMP

- If "OVERTEMP" is not displayed when the unit is turned on in Normal mode, the unit is normal. (It is likely that this was a temporary temperature rise, lower the volume of the speakers.)
- If "OVERTEMP" is displayed again when the unit is turned on in Normal mode, the following causes can be suspected:
 1. One or more of the ICs among the three digital amplifier ICs (IC3201, IC3301, and IC3401: TAS5122DCA) on the MAIN Assy is in failure.
 2. The OTW line from one of the above digital amplifier ICs to the system-control IC (PDC128A) is short-circuited by grounding or is broken.

7. DSP error display

- Each time the SOUND key on the remote control unit is pressed while the power is on, the DSP error display and the normal display are alternately switched.

8. Accumulated power-on time display and speaker setting display

- If the AUDIO INPUT key on the main unit is held pressed for 8 seconds while the power is on, the accumulated power-on time display and the speaker-setting display will be alternately switched at intervals of 3 seconds.

Speaker-setting display

T A L L S P

At intervals of 3 seconds

Accumulated power-on time display

1 0 H 3 0 M

- Power-on time is always counted while the power is on, regardless of unit's functions and operations. However, it is not counted during Standby mode.
- The maximum countable power-on time is 255H59M (255 hours 59 minutes.) The indication will not advance beyond that.
- The accumulated power-on time basically cannot be cleared.

Test Mode connecting point

A MAIN ASSY **SIDE B**

Connecting point

1. Overview

Several types of speakers are planned to be used with this product, and according to speaker type, the sound-quality parameters to be sent to the Digital Amplifier section are different. Since the parameters for the planned speaker types have been written in the EEPROM, by simply selecting the speaker type, as shown below, speaker setting is completed.

2. How to select the settings

1. While holding the VOL+ and STANDBY/ON keys on the Display unit pressed, connect the power cord to the wall outlet.

Note: If the power cord was disconnected immediately before, be sure to wait at least one minute before turning on the power in this way. Otherwise, the unit may not operate properly.

Or, during Standby mode, hold the VOL+ and STANDBY/ON keys pressed for 3 seconds.

2. The power comes on; then the following indication appears.

S P . T Y P E

3. Press the key corresponding to the speaker to be used to determine the setting. The power will automatically be turned off.

VOL- key
VOL+ key
AUDIO INPUT key
SURROUND key
STANDBY/ON key

R	E	G	U	L	A	R	1
T	A	L	L	S	P		
N	X	T		S	P		
R	E	G	U	L	A	R	2
A	V	G	A	T	E		

: Flashing

Note: Be sure to select the setting corresponding to the model number of the speaker. (See the table below.)

Destination	Model Number	Speaker	Remarks	Speaker setting
Europe	SX-SW55/WYXCN, /WVXCN SX-SW77/WYXCN, /WVXCN	SMALL1 TALL		REGULAR1 TALL
North America	SX-SW950/KUXCN	NXT		NXT
Japan	SX-06SW/JJXCN SX-E230SW/JJXCN	AV GATE TALL	AV rack with SP	AV GATE TALL
General	SX-SW100/TDLPWXCN	SMALL2 TALL		REGULAR2 REGULAR2
China	SX-SW100/NAXCN	TALL		TALL

3. How to confirm the speaker setting

1. While holding the AUDIO INPUT and STANDBY/ON keys on the Display unit pressed, connect the power cord to the wall outlet.

Note: If the power cord was disconnected immediately before, be sure to wait at least one minute before turning on the power in this way. Otherwise, the unit may not operate properly.

Or, during Standby mode, hold the AUDIO INPUT and STANDBY/ON keys pressed for 3 seconds.

2. Enter Service/Test mode.

3. Hold the AUDIO INPUT key pressed for 8 seconds.

4. The setting is displayed.

T A L L S P
U N K N O W N

5. If no setting has been written in the EEPROM, "UNKNOWN" is displayed. In this case, the unit will operate in the same way as if "REGULAR 1" (satellite) were set.

4. Error indication

When the unit is turned on without any speaker setting, a warning "NO SPTYP" will be displayed. Even with this warning displayed, all key operation is possible. After a key operation, the display will return to this warning indication.

N O S P T Y P

A

• Specification of DSP error display

B

Example)

ERR. 0	DIER - UM	Data cannot be received from DIR. → DIR is assumed to be in failure.
ERR. 1	DSER - UM	Data cannot be received from DSP. → Communication between DIR and DSP is in failure. → DSP is assumed to be in failure.
ERR. 2	HREQ - UM	No value is returned from HREQ. → DSP is assumed to be in failure.
ERR. 3	DSNG - UM	There are DSP error data. → Communication between DIR and DSP is in failure. → DSP is assumed to be in failure.
ERR. 4	DMUT - M	DECMUTE is always activated. → Communication between DIR and DSP is in failure. → DSP is assumed to be in failure.
NO ERR (The source is 88.2/96kHz.)	DSOK - 9	96-kHz source data are being played back.
NO ERR (The source is 88.2/96kHz.)	DSOK -	No abnormality

C

• DSP error message mode

D

Press the "SOUND" key in test mode, to select the mode that DSP error messages are displayed.
Press the "SOUND" key again to select the normal test mode.
For this reason, make the usual function of "SOUND" not effective in the test mode.

7.1.4 CIRCUIT DESCRIPTION OF DIGITAL AMP. SECTION

PWM Processor section

The PCM signals output from the DVD decoder or AD converter are input to this section, and their volume and sound quality are digitally adjusted. At the output stage, after conversion from PCM to PWM, the signals are output to the Power stage.

Power Stage section

In this section, timing is controlled so that the MOSFETs on the high and low sides will not be turned on simultaneously. The voltage of the PWM signals are raised to drive the gates of the MOSFET, and the PWM signals to drive the speakers are output from the MOSFET at the output stage. Detection and protection functions against short-circuiting of the output signals and temperature exceeding the standard value are also provided.

If the detection and protection work, the ports of the power stage ICs become the following state.

Power Stage ICs No.	Protection Enable State
IC3201	SD_AB (23pin) ⇒ L
IC3301	SD_CD (24pin) ⇒ L
IC3401	OTW (25pin) ⇒ L

Output LPF section

The carrier elements, high-frequency signals that are unnecessary for these speakers, are eliminated. The signals passed through the LPF will become sine-wave signals, as shown in the figure above.

Attention :

As a signal to drive the BTL is output from the negative speaker terminal, DO NOT short-circuit between the negative speaker terminal and ground, such as the chassis.

7.1.5 SPECIFICATIONS FOR THE PROTECTION CIRCUITS FOR THE DIGITAL AMPLIFIER

The protection circuits for the Digital Amplifier are activated, following the specifications shown below. The error indication on the FL display shows the reason a protection circuit was activated.

Upon diagnosis of the Digital Amplifier, refer to the specifications for the protection circuits here and the overview of the Digital Amplifier circuitry.

1. Overview

The system microcomputer monitors the ports for shutdown requests (Pin 23:SD_AB and Pin 24: SD_CD) and the ports for abnormal-temperature detection (Pin 25: /OTW) of the Power Stage ICs (IC3201, IC3301, and IC3401). As soon as any abnormality is detected, it shuts the unit down.

To notify the user of the possibility of a too high a volume, when the unit is turned on the next time, the volume level will be set to 0, and an error message will be displayed on the FL display.

2. Ports on the system microcomputer to be used for detection

Pin 77: SHUTDOWN

Low voltage at this pin means overcurrent or voltage too low (= V+B27) at a Power Stage IC.

Pin 79: XOTW

Low voltage at this pin means the temperature at the Power Stage ICs exceeded 125°C.

Note: As one Power Stage IC is provided with two channels, three Power Stage ICs (in total 6 channels) are mounted in this unit. For abnormality detection, the unit implements a logical OR operation regarding these three ICs. Therefore, which IC is abnormal cannot be known directly. To find which IC is abnormal, it is required to check whether abnormality detection is activated or not with the abnormality detection port of each IC open (by temporarily removing a series resistor (IC3201:R3201-R3203, IC3301:R3301-R3303, IC3401:R3401-R3403)).

3. Detection timing

Start : Detection starts 500 ms after the PWRCONT 2 port (Pin 84) of the system microcomputer becomes active by your pressing the STANDBY/ON key.

Finish : When the STANDBY/ON key is pressed again (when the power-off process starts).

4. Operation of the protection circuits

The following three protection circuits are activated when the conditions shown below are met:

Overcurrent detection: Indication on the FL display: OC ERROR

Conditions: If the SHUTDOWN ports, which are monitored every 10 ms, become low 7 out of 10 times. (If they become low 7 times in succession, the conditions are met at that point.)

Abnormal temperature detection 1: Indication on the FL display: OVERTEMP

Conditions: If the XOTW ports, which are monitored every 10 ms, become low in succession for one minute.

Abnormal temperature detection 2: Indication on the FL display: OVERTEMP

(Prerequisite: The XOTW ports, which are monitored every 10 ms, become low three times in succession.)

Conditions: The above prerequisite is upheld, and the conditions for an overcurrent detection are met.

5. Process when the protection circuits are activated

The unit is shut down within 30 ms after abnormality detection then the volume level is set to 0. The unit can be turned on immediately after the shutdown.

A fan is provided with this unit. Its rotation speed can be switched between low and high under the following conditions.

1. Conditions for switching the rotation speed from low to high

- In a case where an audio signal is input and the main volume becomes VOL 20 or more
- The rotation speed is not switched to high immediately after the main volume becomes VOL 20 but with a delay of 30 seconds.
 - If a digital stream signal is not input, the rotation speed is not switched to high even if the main volume becomes VOL 20 or more.
 - If the function is ANALOG IN, even if there is no audio signal input, 30 seconds after the main volume becomes VOL 20 or more, the rotation speed is switched to high.

2. Conditions for switching the rotation speed from high to low

- If the main volume becomes less than VOL 20
 - During muting
 - If a digital stream signal is not input
- Note:** The rotation speed is immediately switched to low when one of the above conditions is met.

3. Fan drive circuit and drive voltage

The fan drive circuit and the drive voltages at low/high rotation speed are shown below:

Circuit for switching the drive voltage between 7 V and 12 V

7-V drive circuit

	Power	Voltage (V)
Low speed, no digital stream signal (except when the function setting is ANALOG IN)	VSF+12	12.3
	VSFAN	6.7
Low speed, with audio input, with VOL 19 or less	VSF+12	13.1
	VSFAN	7.4
High speed, with VOL 20 or more	VSF+12	13.0
	VSFAN	12.2

Note: The above voltage values are references. They differ from product to product.

7.1.7 DISASSEMBLY

Note 1: Even if the unit shown in the photos and illustrations in this manual may differ from your product, the procedures described here are common.

1 DISPLAY Unit

- ① Remove the two screws.
- ② Remove the one screw.
- ③ Remove the display cover.

● Rear view

- ④ Remove the three screws.
- ⑤ Unhook the two hooks.
- ⑥ Remove the FL and CONNECT Assys.

● Rear view

2 Cosmetic Baffle

- ① Insert a thin slot screwdriver into the gap between the cosmetic baffle and main housing and gently pry the baffle away.

Note: To avoid damage, alternately pry at two points, as shown in the photo below, little by little, not in a single motion.

● Bottom view

- ② Remove the cosmetic baffle.

3 Speaker

- ① Remove the four screws.
- ② Remove the speaker.

- ③ Disconnect the connection cord.

4 Main Section

- ① Remove the four screws.

- ② Disconnect the connection cord.
- ③ Remove the two screws.
- ④ Pull out the Main Section.

⑤ Remove the three screws.

⑥ Remove the seven screws.

⑦ Remove the chassis T with rear panel SW by unhooking the two hooks.

● Rear view

⑧ Connect the DISPLAY Unit.

Note : Coil the ferrite clamp with the lead wire three turn in exchange of Ferrite Clamp (DTH1158) or 4P Lead with Housing (ADX7487).
EMC is not good when does not coil it.

- Single-ended, Analog-input 24-bit, 96-kHz Stereo A/D Converter

Pin Arrangement (Top view) ● Block Diagram

Pin Function

No.	Pin Name	I/O	Pin Function
1	VINL	I	Analog input, L-channel
2	VINR	I	Analog input, R-channel
3	VREF1	–	Reference-voltage-1 decoupling capacitor
4	VREF2	–	Reference-voltage-2 decoupling capacitor
5	VCC	–	Analog power supply, 5-V
6	AGND	–	Analog GND
7	PDWN	I	Power-down control, active-low (2)
8	BYPAS	I	HPF bypass control. LOW: Normal mode (dc reject); HIGH: Bypass mode (through)(2)
9	TEST	I	Test, must be connected to DGND (2)
10	LRCK	I/O	Audio data latch enable input/output (1)
11	BCK	I/O	Audio data bit clock input/output (1)
12	DOUT	O	Audio data digital output
13	DGND	–	Digital GND
14	VDD	–	Digital power supply, 3.3-V
15	SCKI	I	System clock input: 256 fs, 384 fs, 512 fs or 768 fs (3)
16	OSR	I	Oversampling ratio select input. LOW: ×64 fs, HIGH: ×128 fs (2)
17	FMT0	I	Audio data format select input 0 (2)
18	FMT1	I	Audio data format select input 1 (2)
19	MODE0	I	Mode select input 0 (2)
20	MODE1	I	Mode select input 1 (2)

(1) Schmitt-trigger input

(2) Schmitt-trigger input with internal pulldown (50 kohm typically), 5-V tolerant

(3) Schmitt-trigger input, 5-V tolerant

● Pin Function

A

No.	Pin Name	I/O	Pin Function
1	VRA_PLL	–	Voltage reference for PLL analog supply 1.8V
2	PLL_FLT_RET	AO	PLL external filter return
3	PLL_FLTM	AO	PLL negative input
4	PLL_FLTP	AI	PLL positive input
5	AVSS	P	Analog ground
6	AVSS	P	Analog ground
7	VRD_PLL	P	Voltage reference for PLL digital supply 1.8V
8	AVSS_PLL	P	Analog ground for PLL
9	AVDD_PLL	P	3.3V analog power supply for PLL
10	VBGAP	P	Band gap voltage reference
11	RESET	DI	System reset input, active low
12	HP_SEL	DI	Headphone input/output selector
13	PDN	DI	Power down, active low
14	MUTE	DI	Soft mute of outputs, active low
15	DVDD	P	Digital power supply 3.3V supply for digital core and most of I/O buffers
16	DVSS	P	Digital ground for digital core and most of I/O buffers
17	VR_DPLL	P	Voltage reference for digital PLL supply 1.8V
18	OSC_CAP	AO	Oscillator capacitor
19	XTL_OUT	AO	XTL_OUT and XTL_IN are the only LVCMOS terminals on the device
20	XTL_IN	AI	XTL_OUT and XTL_IN are the only LVCMOS terminals on the device
21	RESERVED	–	Connect to digital ground
22	RESERVED	–	Connect to digital ground
23	RESERVED	–	Connect to digital ground
24	SDA	DIO	I ² C serial control data interface input/output
25	SCL	DI	I ² C serial control clock input/output
26	LRCLK	DI	Serial audio data left/right clock (sampling rate clock)
27	SCLK	DI	Serial audio data clock (shift clock)
28	SDIN4	DI	Serial audio data 4 input is one of the serial data input ports
29	SDIN3	DI	Serial audio data 3 input is one of the serial data input ports
30	SDIN2	DI	Serial audio data 2 input is one of the serial data input ports
31	SDIN1	DI	Serial audio data 1 input is one of the serial data input ports
32	PSVC	O	Power supply volume control PWM output
33	VR_DIG	P	Voltage reference for digital core supply 1.8V
34	DVSS	P	Digital ground
35	DVSS	P	Digital ground
36	DVDD	P	3.3V digital power supply
37	BKND_ERR	DI	Active low. A backend error sequence is generated by applying logic low to this terminal
38	DVSS	P	Digital ground
39	VALID	DO	Output indicating validity of PWM outputs active high
40	PWM_M_1	DO	PWM 1 output (differential –)
41	PWM_P_1	DO	PWM 1 output (differential +)
42	PWM_M_2	DO	PWM 2 output (differential –)
43	PWM_P_2	DO	PWM 2 output (differential +)
44	PWM_M_3	DO	PWM 3 output (differential –)
45	PWM_P_3	DO	PWM 3 output (differential +)
46	PWM_M_4	DO	PWM 4 output (differential –)
47	PWM_P_4	DO	PWM 4 output (differential +)
48	VR_PWM	P	Voltage reference for digital PWM core supply 1.8V
49	PWM_M_7	DO	PWM 7 (Line out L) output (differential –)
50	PWM_P_7	DO	PWM 7 (Line out L) output (differential +)

F

No.	Pin Name	I/O	Pin Function
51	PWM_M_8	DO	PWM 8 (Line out R) output (differential -)
52	PWM_P_8	DO	PWM 8 (Line out R) output (differential +)
53	DVSS_PWM	P	Digital ground for PWM
54	DVDD_PWM	P	3.3V digital power supply for PWM
55	PWM_M_5	DO	PWM 5 output (differentil -)
56	PWM_P_5	DO	PWM 5 output (differentil +)
57	PWM_M_6	DO	PWM 6 output (differentil -)
58	PWM_P_6	DO	PWM 6 output (differentil +)
59	PWM_HPML	DO	PWM left channel headphone (differential -)
60	PWM_HPPL	DO	PWM left channel headphone (differential +)
61	PWM_HPMR	DO	PWM right channel headphone (differential -)
62	PWM_HPPR	DO	PWM right channel headphone (differential +)
63	MCLK	DI	MCLK is a 3.3V clock master clock input
64	RESERVED	–	Connect to digital ground

Note of types : A = analog, D = 3.3V digital, P = power/ground/decoupling, I = input, O = output

89	VDD3	VDD3	–	Power supply
90	PC7/A7	FLASHE/D	I	for FLASH writing / On board debugger
91	PC6/A6	FLASHDO	O	for FLASH writing / On board debugger
92	PC5/A5	FLASHCLK	O	for FLASH writing / On board debugger
93	PC4/A4	(SWMIX)	O	Control for subwoofer mix
94	PC3/A3	TXPOWER	O	Control power supply of Tuner etc.
95	PC2/A2	(DMUTECHECK)	O	D-AMP SOFT MUTE MONITOR
96	PC1/A1	FANCONT	O	Control fan speed
97	PC0/A0	(DTSMIX)	O	Control for dts mix
98	PA0/CS2#	XDIRRST	O	Reset to DIR /CODEC
99	PA1/CS1#	XDIRCS	O	Chip select to DIR/CODEC
100	PA2/CS0#	DIRDO	I	Data input from DIR/CODEC

- Port0 (P00-P07) can be selected for input or output by each 4 bits (P00-P03,P04-P07). Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- Port1 (P10-P17) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1bit in option.
- Port2 (P20-P27) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- Port3 (P30-P36) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- Port7 (P70-P73) can be selected for input or output by each 1 bit. Set for input when reset.
- Port8 (P80-P87) can be selected for input or output by each 1 bit. Set for input when reset.
- PortA (PA0-PA5) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- PortB (PB0-PB7) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- PortC (PC0-PC7) can be selected for input or output by each 1 bit. Set for input when reset. And it can be set C-MOS or Nch-OD by each 1 bit in option.
- PortE and PortF can be selected for input or output by each 2 bits.
- In case of without RDS, it is best that RDSDATA and RDSCLK are assigned as I/O port which can be set output and output low level.

8. PANEL FACILITIES

Display unit

1 STANDBY/ON

Press to switch the system on/into standby.

2 **Front panel display**

See below for details.

3 **VOLUME** buttons

Use to adjust the volume.

4 **AUDIO INPUT**

Press repeatedly to select one of the external audio inputs.

(DVD/DVR1, DVD/DVR2, **DIGITAL** or **ANALOG**)

Except North America

(DVD,DTV, PC/GAME or AUX)

North America only

5 **SURROUND**

Use to select a Surround mode

6 **IR remote sensor**

Display

1 **DTS**

Lights during playback of a DTS source

2 **F.SURR.**

Lights when the Front Surround listening mode is selected.

3 **Tuner indicators**

– Lights when a broadcast is being received.

– Lights when a stereo FM broadcast is being received in auto stereo mode.

– Lights when FM mono reception is selected.

– Lights when in one of the RDS display or search modes.

4 **kHz / MHz**

Indicates the frequency unit shown in the character display (**kHz** for AM, **MHz** for FM).

5 **Character display**

6

Lights when sleep timer is active

7 **PL II**

Lights during Dolby Pro Logic II decoding

8 **D**

Lights during playback of a Dolby Digital source

Rear Panel (Receiver subwoofer)

Remote control (SX-SW77)

Important

- Functions printed in green on the remote control are accessed by pressing the button indicated while holding down the **SHIFT** button.

1 MUTE

Press to mute all audio from the speakers. Press again to cancel and restore the sound.

2 RECORDER

Press to switch the recorder on or into standby.

3 RECEIVER

Press to switch the receiver on or into standby.

4 VOLUME +/-

Use to adjust the volume.

5 Function select buttons

HDD

Press to select the hard disk (HDD) for recording or playback. The receiver subwoofer's audio input is also switched to **DVD/DVR2.1**

DVD

Press to select the DVD for recording or playback. The receiver subwoofer's audio input is also switched to **DVD/DVR2.1**

FM/AM

Press to select the built-in radio tuner.

AUDIO INPUT

Press repeatedly to select one of the receiver subwoofer's audio inputs (**DVD/DVR1**, **DVD/DVR2**, **DIGITAL** or **ANALOG**).

6 CHANNEL +/-

Press to change the channel of the built-in TV tuner.

7 Numeric buttons and CLEAR

Use the number buttons for track/chapter/title selection; channel selection, and so on.

Use **CLEAR** to clear an entry and start again.

8 VIDEO INPUT

Press to change the DVD recorder input for recording and playback.

9 HELP

Press for help on how to use the current GUI screen

10 GUIDE Plus+™ system controls

GUIDE

Press to display the GUIDE Plus+™ screen; press again to exit.

+ SHIFT: INFO

Press to see additional information for the highlighted item in GUIDE Plus+™.

11 DISC NAVIGATOR / TOP MENU

Press to display the Disc Navigator screen, or the top menu if a DVD-Video disc is loaded.

+ SHIFT: RDS DISP

Changes RDS displays

12 DVD MENU

Press to display the disc menu if a DVD-Video disc is loaded.

When in the GUIDE Plus+™ system, use to jump directly to the Menu bar.

+ SHIFT: SYSTEM SETUP

Use to access the menu system for surround sound setup, tuner settings and so on.
