Service Manual

ORDER NO.
ARP1720

STEREO TWIN CD CASSETTE DECK AMPLIFIER

XD-Z62T

MODEL XD-Z62T HAS THREE VERSIONS:

Type	Power requirement	Export destination
HB	AC220V,240V (switchable)*	United Kingdom
HE	AC220V,240V (switchable)*	European continent
HEZ	AC220V,240V (switchable)*	West Germany

* Change the jumper wires of assembly boards.

- This manual is applicable to the XD-Z62T/HB and HE types.
- For the HE type, refer to page 22.
- For the other type, refer to additional service manual.
- The XD-Z62T consists of a CD block and a deck amplifier block.
For details, see page 6. The CD block is described in pages 24 to 84.
The Deck amplifier block in pages 85 to 149.
- Ce manuel pour le service comprend les explications en français de réglage.
(voir les pages 59 à 71 pour le bloc CD, et les pages 140 à 144 pour bloc de l'amplificateur.)
- Este manual de servicio trata del método ajuste escrito en español.
(Vea las páginas 72 a 84 para el bloque de CD, y las páginas 145 a 149 para el bloque del amplificador/grabadora.)

1. SAFETY INFORMATION

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120 V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

Additional Laser Caution

1. Laser Interlock Mechanism
The ON/OFF state of the U (S601) and L (S603) switches for detecting the disc clamp state is detected by the system microprocessor, and the design prevents laser diode oscillation when both switches U and L are OFF (H). Thus, the interlock will no longer function if switches U (S601) and L (S603) are deliberately shorted. Laser diode oscillation continues when pin 4, 5, or 29 of CXA1081S (IC1) is connected to ground or the terminals of Q1 are shorted to each other (fault condition).

2. If the fault condition described in 1 is induced with the cover open, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 or higher laser beam.

2. SPECIFICATIONS

Twin CD cassette deck amplifier: XD-Z62T

Amplifier section

DIN music power 50 W + 50 W
(1 kHz, T.H.D. 1%, 8 ohms)
Continuous power output (DIN) 33 W + 33 W
(1 kHz, T.H.D. 1%, 8 ohms)
Graphic equalizer frequency band 100 Hz, 330 Hz,
1 kHz, 3.3 kHz, 10 kHz, ±7 dB
Hum and Noise (DIN, continuous Power/50 mW)
PHONO 68 dB/60 dB
Total Harmonic Distortion
(40 Hz to 20,000 Hz, 15 W, 8 ohms)** .. No more than 0.2%

Tape Deck Section

Systems 4 track, 2-channel stereo
Heads Recording/playback head x 1
Playback head x 1
Erasing head x 1
Motor DC servo 2 speed motor x 2
Wow and Flutter No more than 0.09% (WRMS)
Fast Winding Time Approximately 95 seconds
(C-60 tape)

Frequency Response (– 20 dB recording):
Normal tape 35 Hz to 14,000 Hz ±6 dB
CrO₂ tape 35 Hz to 15,000 Hz ± 6 dB
Signal-to-noise ratio
Dolby NR OFF 56 dB
Noise Reduction Effect
Dolby B type NR ON More than 10 dB (at 5 kHz)

Compact disc player section

Type Compact disc digital audio system
Usable discs Compact Disc
DA conversion format 16-bit linear
Frequency response 4 Hz – 20 kHz (+0.5 dB) (EIAJ)
SN ratio more than 100 dB (EIAJ)
Dynamic range more than 92 dB (EIAJ)
Channel separation more than 91 dB (EIAJ)
Wow and flutter less than (±0.001% W.PEAK)
(below measurable level) (EIAJ)
Channels 2-channel (stereo)

B

C

D

5. LINE VOLTAGE SELECTION FOR HB, HE AND HEZ TYPES

- Line voltage can be changed with the following steps.
- 1. Disconnect the AC power cord.
- 2. Remove the bonnet and separate the deck amplifier block and the CD block.
- 3. CD block (TRANSFORMER BOARD assembly); change the position of the wire ⑥ as follows.

Voltage	Jumper ⑥ position
220V	①
240V	②

Deck amplifier block (POWER SUPPLY assembly); Change the position of the jumper wires A-E as follows.

Jumper wire	Voltage	220V	240V
A		○	×
B		×	○
C		○	×
D		○	×
E		×	○

○: Be needed
×: Be needless

- 4. Stick the line voltage label on the rear panel.

Description	Part No.
220Vlabel	AAX-193
240Vlabel	AAX-192

6. CONNECTIONS

- ① Turntable (separated sold PL-Z82 or PL-Z92)
- ② FM/AM tuner (F-Z92L)
- ③ Twin CD cassette deck amplifier
- ④ Speaker system
- ⑤ Video disc player or Video cassette recorder, etc.
- ⑥ CD player control cord
- ⑦ Accessory FM T-type antenna
- ⑧ Accessory AM loop antenna
- ⑨ Tuner input/output cord
- ⑩ Turntable output cord
- ⑪ Speakers cord
- ⑫ Power cord

Plug the power cord into the AC wall socket outlet only after all the connections have been completed.

Proceed as follows with the set-up and connections.

1. Place the tuner on top of the twin CD cassette deck amplifier.
2. Connect the tuner input/output cord ⑨ to twin CD cassette deck amplifier.

TUNER CONNECTION (Page 4, diagram B)

Insert the connector until it locks, thus ensuring that it is connected. When disconnecting the connector, pull it in the opposite direction while pressing the left and right claws.

3. Connect the FM antenna ⑦ and the AM antenna ⑧ to the tuner's antenna terminals.
4. Connect CD PLAYER CONTROL OUT jack of the tuner to CONTROL IN jack of twin CD cassette deck amplifier with accessories control cord ⑥ of twin CD cassette deck amplifier.
5. Place the turntable on top of the tuner.
6. Connect the turntable's cords ⑩ to the twin CD cassette deck amplifier's jacks.
If using this unit together with the optional PL-Z82 or PL-Z92, connect the turntable's audio cords and power supply cord respectively to the cassette tape deck amplifier's PHONO jacks and DC 12V OUTPUT jack.
If using a different turntable, connect the audio cord and earth cord.
7. Use the "VIDEO" jacks for connection to the audio output jacks of a video disc player or VCR.

NOTE:

- Insert the plugs securely into the jacks. Improper connection can lead to sound distortion or malfunctioning.
 - The white plug is for the left channel connection and the red plug for the right channel connection.
8. Connect the speaker cords ⑪ to the SPEAKERS terminals.
Connect the "+" terminals on the twin CD deck amplifier to the "+" terminals on the speakers, the "-" terminals on the twin CD deck amplifier with the "-" terminals on the speakers.

Connecting the speaker cords

1. Cutter
2. Twist the strands

3. Push toward the outside
4. Push toward the inside

NOTE:

Do not allow the conductors of the cords to project beyond the terminals and to come into contact with other conductors. A breakdown or failure may occur when conductors touch one another.

Speaker impedance

Connect speaker systems with a nominal impedance of between 6 and 16 ohms.

9. Finally, connect the power cord ⑫ to the AC wall socket.

Gratis schema's

Digitized by

www.freesevicemanuals.info

7. PANEL FACILITIES

XD-Z62T (FRONT)

REAR PANEL FACILITIES

Twin-CD cassette deck amplifier: XD-Z62T

① TUNER jack

Connect the F-Z92L FM/AM tuner.

② Ground terminal (GND)

Connect this to the ground terminal on the turntable (except for PL-Z92 and PL-Z82).

③ TURNTABLE DC 12 V OUTPUT jack

This jack supplies power to the PL-Z82 or PL-Z92.

④ PHONO input jacks

Connect the output cord on the turntable to these jacks.

⑤ VIDEO input jacks

Connect to audio output jacks of video disc player or VCR, etc.

⑥ SPEAKERS terminals

L: Connect the left speaker system as seen from the listening position.

R: Connect the right speaker system as seen from the listening position.

NOTE:

Connect a speaker system having a nominal impedance ranging from 6 ohms to 16 ohms.

⑦ CONTROL IN jack

Connect to CD PLAYER CONTROL OUT jack of tuner (F-Z92 or F-Z92L).

⑧ Power cord

Connect this to the AC wall socket.

FRONT PANEL FACILITIES

Twin-CD cassette deck amplifier: XD-Z62T

- Tapes can be played back on deck I; tapes can be played back and recorded on deck II.
- Sound can be recorded with the quality which has been adjusted by the graphic equalizer.

■ Amplifier section

① POWER STANDBY/ON switch

When this switch is set to on position, power is supplied to the twin-CD cassette deck amplifier's main circuit. The POWER unit's switch is geared to selecting the transformer's secondary so that even in STANDBY position, the unit's circuitry will work as long as the power cord is connected to a power outlet. Disconnect the power cord from the power outlet when you do not plan to use the unit for a long period of time.

The unit is in STANDBY when the display section of the tuner indicated only the time.

② Headphone jack (PHONES)

NOTE:

No sound is heard from the speakers if headphones are plugged into this jack.

③ FUNCTION switches/indicators

[CD]

Press to listen to compact discs.

[PHONO]

Press when playing records on a turntable connected to the PHONO jacks.

[TUNER]

Press when listening to a radio broadcast.

[TAPE]

Press when listening to a cassette tape.

[VIDEO]

Press when listening to a component connected to the VIDEO jacks.

④ VOLUME control

■ Graphic equalizer section

① Graphic equalizer controls

Fine adjustments in sound quality are possible using the 5 controls on the graphic equalizer.

■ Cassette deck section

① Deck I Cassette door

② Deck I Operation switches

▶ **PLAY (FWD)**..... For playing back a tape in the forward mode.

◀ **PLAY (REV)**..... For playing back a tape in the reverse mode.

■ **STOP**..... For stopping the tape.

▶▶ **FAST** Fast forward in forward mode, rewind in reverse mode.

◀◀ **FAST** Rewind in forward mode, fast forward in reverse mode.

③ Operation indicators

ASES: Lights when the ASES (Auto Synchro Editing System) is operating.

RECORDING: Lights when recording Flashes when copying a tape.

Slow flashing – Normal copy

Rapid flashing – High speed copy

Direction(◀ , ▶): Show direction of tape travel

④ ASES switch

Used for automatic transfer of music from CD to cassette tape.

⑤ DOLBY* NR switch

Set this switch to the ON position to activate the DOLBY NR system.

- Tapes recorded using Dolby noise reduction should always be played back with the noise reduction system on. Sound quality will be adversely affected if they are played back with the system off, or if tapes recorded using a different noise reduction system are played back with the Dolby NR system on.
- It is recommended that tapes recorded using Dolby B NR be so marked on the label. This will help to prevent incorrect setting of the noise reduction switch during playback.

* Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation.
"DOLBY" and the double-D symbol  are trademarks of Dolby Laboratories Licensing Corporation.

⑥ REVERSE MODE switch

Switch position		During playback	During recording
REC 	RELAY PLAY	Plays both tape sides. When one deck finishes playback, the other side begins playback of both tape sides. (6 times maximum). If there is a tape in only one deck, then that deck continuously plays both sides of the tape. (6 times maximum).	Records on one side (Deck II only).
REC 	PLAY 	Plays both sides continuously. (6 times maximum).	Records on both sides (Deck II only).

⑦ Deck I EJECT switch**⑧ Deck II EJECT switch****⑨ SYNCHRO COPY switches**

Use for tape copying.

NORMAL: Copying from the Deck I tape to the Deck II tape at normal recording/playback speed.

HIGH: Copying at about twice normal tape speed. (Copies can be made in about half the NORMAL time.)

⑩ MUTE () switch (Deck II)

Use to create an unrecorded blank space between songs. The unrecorded space will be created for as long as this switch is kept pressed.

⑪ REC () switch (Deck II)

Set to recording standby mode. Then, recording starts by pressing PLAY switch ( or ).

⑫ PAUSE () switch (Deck II)

Temporarily stops tape travel. Cancels pause mode when pressed again.

⑬ Deck II Cassette door**⑭ Deck II Operation switches**

- ▶ **PLAY (FWD)**..... For playing back a tape in the forward mode.
- ◀ **PLAY (REV)**..... For playing back a tape in the reverse mode.
- **STOP**..... For stopping the tape run.
- ▶▶ **FAST**..... Fast forward in forward mode, rewind in reverse mode.
- ◀◀ **FAST**..... Rewind in forward mode, fast forward in reverse mode.

■ Compact disc player section**① DISC trays (I, II)**

This is where the disc is set. When power is switched ON and the OPEN/CLOSE switch is pressed, the tray is ejected forward. To insert the tray, press the OPEN/CLOSE switch, or lightly push the tray in with your finger. With the disc tray open, press the play switch to close the disc tray and start playback.

② OPEN/CLOSE switches (I, II)

Press when you wish to eject or load a disc. Each time the switch is pressed, the tray is alternately pushed out or pulled in.

DISC I: Opens and closed DISC tray I.

DISC II: Opens and closed DISC tray II.

③ Indicators

- AUTO EJECT : Lights during auto eject playback.
- PGM : Lights after programming (after program has been memorized).
- RND : Lights during random playback.
- DISC : Displays the disc number (I or II) of the disc to be played.
- ▷ : Lights during playback.
- ⏏ : Lights during temporarily interrupted playback.
- TRACK : Displays the current track number and index number (during normal playback and programmed playback) or the track being programmed during programming operation.
- 1 ▶ REP : Lights during repeat playback of one track.
- REP : Lights during repeat play.
- TIME/REM/TOTAL : Changes each time the TIME switch is pressed.
 - TIME : Displays the track number of the track being played (TRACK) and the elapsed time (minutes and seconds).
 - REM : Displays the remaining time on the track being played.
When the TIME switch is pressed again, the remaining time on the disc being played will be displayed.
 - TOTAL : Displays the total number of tracks on the disc (TRACK) and the overall playback time (minutes and seconds) of disc I. When the TIME switch is pressed again, the total number of tracks on the disc (TRACK) and the overall playback time of disc II will be displayed.
During playback, the display goes on for about 5 seconds before changing to the TIME display.
- M (minute) : Displays the minutes of the elapsed time, total playback time, and remaining time.
- S (second) : Displays the seconds of the elapsed time, total playback time, and remaining time.

④ RANDOM PLAY switch

Press to begin random playback.

⑤ TIME switch

This switch selects the display mode of the indicator panel. Each time the switch is pressed, the indication changes from TIME, REM, to TOTAL in that order. (For details concerning the display contents, refer to the explanation about the indicators.)

⑥ AUTO EJECT switch

Press to perform auto eject playback.

When a disc is finished playing, the disc's disc tray will automatically eject. The other disc tray will close and playback will start. By replacing discs, continuous playback can be maintained.

⑦ PGM MEMORY switch (PROGRAM MEMORY)

Use to program a sequence of tracks.

- Press this switch after selecting a desired disc and track with DISC SELECT and track search switches. Tunes will be added to the program in the order in which they are specified.

⑧ REPEAT switch

Press this switch for repeat playback. Pressing the switch once, twice, or three times will change the repeat mode from single track repeat, all tracks repeat, and repeat playback cancellation.

Single track repeat:

The currently-playing track will repeat. The switch can be used during normal playback, program playback, random playback.

All tracks repeat:

All tracks on the disc will be repeated.

- If pressed during normal playback mode, all tracks on the discs will be repeatedly played back.
- If pressed during programmed playback, the programmed tracks will be repeatedly played back in the programmed order.
- In the case of random play mode, after all the tracks have been played, random play will start again.

⑨ Manual search switches

When the player is in playback or pause modes, these switches are pressed to perform fast forward or reverse operations to allow manual searching. These operations are only carried out during the time either switch is pressed.

[▶▶]: For fast forward operation. If the end of the disc is reached during fast forward operation, "End" will be displayed and the player will enter the pause mode. [During programmed playback, the player will enter the pause mode right before it reaches the next track (program step).]

[◀◀]: For fast reverse operation. If the beginning of the disc is reached during fast reverse operation, the player will enter the playback mode. [During programmed playback, the player will enter the playback mode right before it reaches the previous track (program step).]

⑩ Track search switches

During normal playback, programmed playback or pause modes, these switches are pressed to search for the desired track.

Pressing either switch causes the player to advance to the next track or to return to the previous track. Even in stop mode, these switches can be used to select the desired track. Press the play switch to playback the desired track.

[▶▶]: When pressed once, playback advances to the beginning of the next track on the disc; when pressed continuously, playback advances to the beginning of succeeding tracks on the disc. (During programmed playback, it advances to the beginning of the next programmed track.)

[◀◀]: When pressed once, playback returns to the beginning of the currently playing track; when pressed continuously, playback shifts to the beginning of previous tracks on the disc. (During programmed playback it returns to the beginning of the previously programmed track.)

⑪ Play switch (▶)

Press to begin playback, and to cancel the pause mode.

⑫ Pause switch (⏸)

Press to temporarily interrupt playback. When pressed again, the pause mode is cancelled and playback resumes.

⑬ Stop/clear switch (■)

Press to stop playback. When pressed, the player goes into stop mode and all operations stop.

Press to clear a program. When pressed during stop mode, the program stored in memory is cleared.

⑭ DISC SELECT switches

DISC I: Use to select DISC I for playback or programming.

DISC II: Use to select DISC II for playback or programming.

- During playback, when the disc select switch for the disc not being played is pressed, the current playback will stop and playback of that disc will begin.

Remote control unit

- ① **PHONO key**
Sets function to PHONO.
- ② **POWER key**
- ③ **TUNER STATION keys**
 - Before operating, memorize the stations to STATION CALL switches.
 - + Stations change in order in the upward direction.
 - Stations change in order in the downward direction.

- ④ **DECK I operation keys**
 - ▶ Forward play
 - ◀ Reverse play
 - Stop

- ⑤ **Timer operation keys**
SLEEP: Sets the sleep timer. Each time you press this key, the setting changes as shown here. The current setting is shown on the tuner display.

If you press the SLEEP key during SLEEP operation, the display will show the time remaining till power turns off.

SNOOZE: Turns off power if pressed after timer playback begins. Timer playback begins again about five minutes later.

- ⑥ **VOLUME UP (+)/DOWN (-) keys**

- ⑦ **DECK II operation keys**
 - ▶ Forward play
 - ◀ Reverse play
 - ▶▶ Fast
 - ◀◀ Fast
 - Stop
 - ■ Pause
 - REC (Recording standby). Next press the play button to begin recording.

- ⑧ **CD operation keys**

- ▶ Play
- DISC..... DISC selection
- Stop
- ■ Pause
- ▶▶ Track search (forward)
- ◀◀ Track search (reverse)

The amplifier section function automatically switches to the music source being operated when you press the CD playback (▶), deck playback (◀▶), or tuner station selection.

To operate with the remote control unit, use the keys with the same function indicating symbols (for example ▶) as those shown on the components.

NOTE:
It is not possible to operate the CD player section with the remote control unless the remote control cord is connected.

Range of remote control

When the remote control unit is pointed at the remote control sensor window on the tuner and any of its keys is pressed, the tuner and other components can be operated by remote control.

Distance: Within a range of about 7 meters from the remote control sensor window on the tuner.

Angle: Within approx. 30 degrees from the center of the remote control sensor window on the tuner.

Remote control will not be possible if there is an obstacle between the remote control unit itself and the remote sensor window on the tuner.

8. FOR HE TYPE

8.1 CONTRAST OF MISCELLANEOUS PARTS

- NOTES:**
- Parts without part number cannot be supplied.
 - The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

The XD-Z62T/HE type is the same as the XD-Z62T/HB type with the exception of the following sections.

Mark	Symbol & Description	Part No.		Remarks
		XD-Z62T/HB type	XD-Z62T/HE type	
⚠	POWER SUPPLY assembly	AWZ2247	AWZ2245	DECK AMPLIFIER BLOCK
	CONNECT assembly	Non supply	Non supply	
	FU2003 Fuse (T800mA/250V)	AEK-507	AEK-031	DECK AMPLIFIER BLOCK
	FU2001, FU2004, FU2005 Fuse (T1.25A/250V)	AEK-509	AEK-018	
⚠	AC Power cord	ADG-063	ADG1021	DECK AMPLIFIER BLOCK
	Caution card	ARM1003		
	Operating Instruction (English)	ARM1158		PACKING
	Operating instruction (German)		ARC1139	PACKING
	Operating instruction (English, German, French, Italian, Dutch, Swedish, Spanish, Portuguese)		ARE1120	PACKING
	CD BLOCK	Non supply(240V)	Non supply (220V)	*1

* 1: The only difference between the HB type CD block and the HE type CD block is connection of the power supply (220V and 240V).

8.2 POWER SUPPLY assembly (AWZ2245; HE type) and CONNECT assembly (HE type).

The difference in parts between the POWER SUPPLY assemblies of the HE type (AWZ2245) and the HB type (AWZ2247) is the jumper wire (220V and 240V).

The difference in parts between the CONNECT assemblies of the HE type and the HB type is the jumper wire (220V and 240V).

9.5 ELECTRICAL PARTS LIST

NOTES :

- Parts without part number cannot be supplied.
 - Parts marked by "O" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
 - The A mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - When ordering resistors, first convert resistance values into code form as shown in the following examples.
- Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).
- 560 Ω 56×10¹ 561RD1/4PS 561J
- 47k Ω 47×10³ 473RD1/4PS 473J
- 0.5 Ω 0R5RN2H 0R5K
- 1 Ω 010RS1P 010K
- Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).
- 5.62k Ω 562×10¹ 5621RN1/4SR 5621F

9.6 ADJUSTMENTS

The adjustment items for this unit are shown below. Adjustments must be made in the order in which they are listed. As OPEN/CLOSE operation for disc tray 2 cannot be performed during test mode, use tray 1 for adjustments.

• Adjustment and check items

- Tracking offset, focus offset and RF offset adjustments
- RF level adjustment
- LD (Laser Diode) power check
- Focus lock and spindle lock check
- Grating adjustment
- Tracking adjustment
- Tangential adjustment
- Focus gain adjustment
- Tracking gain adjustment
- VCO free-run frequency adjustment
- Confirmation of S character (focus error)

• Measuring Equipment

- Dual trace oscilloscope
- Laser power meter
- Test disc (YEDS-7)
- Loop gain adjustment filter
- Signal generator
- Frequency counter
- Other general tools

Adjustment points

Fig. 9-1.

• Test Mode

Test mode setting and cancellation procedures

- To set the test mode, turn ON the power switch (S707) while holding the test mode switch (S1) down.
- The test mode is cancelled by turning the power switch OFF.

The functions of the keys in the test mode are outlined in Table 9-1.

• Adjustment VRs (Variable Resistors) and Names

- VR1: Laser power
- VR2: RF offset (RF. OFS)
- VR3: Focus gain (FCS. GAN)
- VR4: Tracking gain (TRK. GAN)
- VR5: Tracking balance (TRK. BAL)
- VR6: Focus offset (FCS.OFS)
- VR7: Tracking offset (TRK. OFS)
- VR8: VCO free-run adjustment (VCO. ADJ)

In the test mode, the servos are closed and opened individually. Consequently, the servos must each be closed one at a time (in serial sequence) in order to set the unit to normal PLAY mode. Note also that during test mode the unit will not enter the PLAY mode when the PAUSE (||) key is pressed alone.

Example: Switching from STOP to PLAY mode.

* In the test mode, the servos must be operated in serial sequence.

• Key Functions in the Test Mode

Symbol	Key name	Function during test mode	Description
▶▶	TRACK FWD	Focus servo close	Turns ON the laser diode, and raises/lowers the focusing actuator to close the focus servo. After closing disc tray 1, the tray is moved to PLAY position.
▶	PLAY	Spindle servo close	Closes the servo in the CLV-A mode after starting the spindle motor.
	PAUSE	Tracking servo close/open	Performs toggle operation: closes the tracking servo and sets to PLAY mode when pressed (provided the focus and spindle servos are closed), at which time the PAUSE indicator illuminates; opens the tracking servo when pressed again.
◀◀	MANUAL SEARCH REV	Carriage reversal (inward movement)	Moves carriage rapidly (3 cm/s) toward the center. Because there is no safety mechanism for stopping the carriage, release the key when the carriage reaches the innermost track.
▶▶	MANUAL SEARCH FWD	Carriage advance (outward movement)	Moves carriage rapidly (3 cm/s) toward the outer edge. Because there is no safety mechanism for stopping the carriage, release the key when the carriage reaches the outermost track.
■	STOP	Stop	Stops all servos and returns system to its initial state.
▲	OPEN/CLOSE Disc I	(Disc tray) open/close	Opens and closes the disc tray. However, pickup does not return to rest when opening, and remains stationary when closing the tray.

Table 9-1.

www.freesevicemanuals.info

Step No.	Oscilloscope Setting		Test Points	Adjusting Points	Check Items/ Adjustment Specifications	Adjustment Procedure
	V	H				
1	TRACKING OFFSET, FOCUS OFFSET, RF OFFSET ADJUSTMENT					
			TP1 Pin 2 (TRK. ERR) TP1 Pin 6 (FCS. ERR) TP1 Pin 1 (RF output)	VR5 (TRK. BAL) VR7 (TRK. OFS) VR6 (FCS. OFS) VR2 (RF. OFS)	Tracking offset 45° 0V ± 50 mV Focus offset 0V ± 50 mV RF offset 100 mV ± 50 mV	- Set to test mode (see page 46). - Turn VR5 TRK. BAL (tracking balance) counterclockwise about 45° from center position. - Adjust VR7 TRK.OFS (tracking offset) so that the TRK. ERR (tracking error) voltage at TP1 Pin 2 becomes 0V ± 50 mV. - Adjust VR6 FCS.OFS (focus offset) so that the FCS.ERR (focus error) voltage at TP1 Pin 6 becomes 0V ± 50 mV. - Adjust VR2 RF.OFS (RF offset) so that the RF output voltage at TP1 Pin 1 becomes 100 mV ± 50 mV. Note: After performing tracking offset adjustment, be sure to perform "6. TRACKING BALANCE ADJUSTMENT."
2	RF LEVEL ADJUSTMENT					
			TP1 Pin 1 (RF output)	VR1 (laser power)	1.5V +0.2V -0V.	- Set to test mode (see page 46). - Play the test disc, connect the oscilloscope to TP1 Pin 1 (RF output), and measure the P-P voltage of the RF waveform. - Adjust so that the voltage becomes 1.5V +0.2V -0V.
3	LD (LASER DIODE) POWER CHECK					
					Less than 0.13 mW	- Set to test mode (see page 46). - Press the TRACK FWD (▶▶) key to turn ON the LD (laser diode). - Place the sensor of the laser power meter directly above the objective lens and confirm that the output power of the LD does not exceed 0.13 mW.

Step No.	Oscilloscope Setting		Test Points	Adjusting Points	Check Items/ Adjustment Specifications	Adjustment Procedure
	V	H				
4	FOCUS LOCK AND SPINDLE LOCK CHECK					
	V 0.5V/div	H 100 msec /div	TP1 Pin 1 (RF output)		RF output exists Normal (clockwise) rotation	• Set test disc. • Set to test mode (see page 46). • Press the MANUAL SEARCH FWD (▶▶) key to move the pickup close to the center of the disc. • Observe the output of TP1 Pin 1 (RF output) on the oscilloscope. Confirm that the RF signal is output after pressing the TRACK FWD (▶▶)key. • Press the PLAY (▶) key and confirm that the disc rotates at constant speed (approx. 30 rpm near center of disc) in the normal (clockwise) direction; make sure that the disc does not rotate too fast or counter-clockwise.
5	GRATING ADJUSTMENT (1) (using an 8 cm disc)					
						Note: This adjustment can only be performed using a 8 cm disc having pits over a diameter of 75 mm. • Set to test mode (see page 46). • Set the 8 cm disc. Shift the pickup to the outermost track so that it is positioned over pits and the pickup grating adjustment hole is visible from the hole in the servo mechanism (see Fig. 9-2.). • Press the TRACK FWD (▶▶) and PLAY (▶) keys in sequence to close the focus servo and spindle servo (do not close the tracking servo). • Observe the waveform output of TP1 Pin 2 TRK.ERR (tracking error) on the oscilloscope, inserting a 4 kHz low-pass filter (see Fig. 9-3.).
						
	Fig. 9-3.					

Step No.	Oscilloscope Setting		Test Points	Adjusting Points	Check Items/ Adjustment Specifications	Adjustment Procedure
	V	H				
	0.5V/div	5 msec/div	TP1 Pin 2 (TRK. ERR)	Grating Grating	Null Point Maximum amplitude	- Insert $\ominus$ screwdriver into the grating adjustment hole, and turn to find the null point (see Photo 9-1.). - Next, slowly turn $\ominus$ screwdriver in counterclockwise direction from the null point and adjust until the waveform (tracking error signal) reaches maximum amplitude (see Photo 9-2.). Note: Use caution since inserting $\ominus$ screwdriver forcefully will cause the pickup unit to float upward. - Finally, confirm that there is no major fluctuation in the P-P voltage of the tracking error signal (do not insert the cutoff 4 kHz low-pass filter) when the pickup is shifted to the innermost track and when the pickup is shifted to the outermost track. If there is a difference of more than $\pm 10\%$, re-adjust by turning the grating adjustment screw to the maximum amplitude point of the tracking error signal.

5 GRATING ADJUSTMENT (2) (without 8 cm disc)

Fig. 9-4.

Fig. 9-5.

Perform this adjustment when an 8 cm disc is not available and Grating adjustment (1) cannot be performed.

Remove the tray 1 before performing this adjustment.

• Removal of tray 1

1. Set tray 1 to OPEN position.
2. Remove screws $\textcircled{C1}$, $\textcircled{C2}$ holding tray 1 in Fig. 9-4.
3. Move tray 1 in the direction of arrow in Fig. 9-5, and as detaching projection $\textcircled{B}$ of tray 1, free slide angle U unit from hook $\textcircled{A}$ of tray 1.
4. Pull out tray 1 as raising its side of slide angle U unit slightly.

Step No.	Oscilloscope Setting		Test Points	Adjusting Points	Check Items/ Adjustment Specifications	Adjustment Procedure
	V	H				
			 Fig. 9-6			Note: This adjustment can only be performed using a disc having pits up to a diameter 115 mm. The test disc (YEDS-7) cannot be used. • Set to test mode (see page 46). • Set a disc. Shift the pickup to the outermost track so that it is positioned over pits and the pickup grating adjustment hole is visible from the hole in the servo mechanism (see Fig. 9-6.). • Press the TRACK FWD (▶▶) and PLAY (▶) keys in sequence to close the focus servo and spindle servo (do not close the tracking servo). • Observe the waveform output of TP1 Pin 2 TRK. ERR (tracking error) on the oscilloscope, inserting a 4 kHz low-pass filter (see Fig. 9-7.).
	0.5V/div	5 msec/div	TP1 Pin 2 (TRK. ERR)	Grating Grating	Null Point Maximum amplitude	• Insert ⊖ screwdriver into the grating adjustment hole, and turn to find the null point (see Photo 9-1.). • Next, slowly turn ⊖ screwdriver in counterclockwise direction from the null point and adjust until the waveform (tracking error signal) reaches maximum amplitude (see Photo 9-2.). Note: Use caution since inserting ⊖ screwdriver forcefully will cause the pickup unit to float upward. • Finally, confirm that there is no major fluctuation in the P-P voltage of the tracking error signal (do not insert the cutoff 4 kHz low-pass filter) when the pickup is shifted to the innermost track and when the pickup is shifted to the outermost track. If there is a difference of more than ± 10%, re-adjust by turning the grating adjustment screw to the maximum amplitude point of the tracking error signal.

Fig. 9-7.

- Insert ⊖ screwdriver into the grating adjustment hole, and turn to find the null point (see Photo 9-1.).
- Next, slowly turn ⊖ screwdriver in counterclockwise direction from the null point and adjust until the waveform (tracking error signal) reaches maximum amplitude (see Photo 9-2.).

Note: Use caution since inserting ⊖ screwdriver forcefully will cause the pickup unit to float upward.

- Finally, confirm that there is no major fluctuation in the P-P voltage of the tracking error signal (do not insert the cutoff 4 kHz low-pass filter) when the pickup is shifted to the innermost track and when the pickup is shifted to the outermost track. If there is a difference of more than $\pm 10\%$, re-adjust by turning the grating adjustment screw to the maximum amplitude point of the tracking error signal.

Step No.	Oscilloscope Setting		Test Points	Adjusting Points	Check Items/ Adjustment Specifications	Adjustment Procedure

	 Slide angle U unit Guide base Slider Tray marker Portion E Tip of guide base coincides with tray marker Slips approx. 2m/m if wrong Tray marker < Magnification of portion E > Fig. 9-8  Loading base Slide angle U unit Down ③ Right ② Tray Synchronous gear Fig. 9-9.  Slide angle U unit Slider Tray B A Fig. 9-10.					After completing adjustments, attach tray 1 in the following process. Remove front panel previously as it disturbs attachment of tray 1. 1. Set slide angle U unit to the foremost position (where opening of tray 1 is completed). 2. Set slider to the foremost position as shown in Fig. 9-8. 3. As shown by dotted line in Fig. 9-9, insert tray 1 aslant to the position that mounting holes of slider and tray 1 coincide (make sure that slider does not move backward). 4. Down tray 1 as pulling it to the right (toward guide). Do it as holding slider from below with finger. 5. Adjust position of tray 1 so that hook (A) and projection (B) are properly fixed as shown in Fig. 9-10. Also do it so that to engage synchronous gear with gear of tray 1. 6. Make sure that mounting holes of slider are being positioned in the center of tray 1's screw holes, and tighten screws in order of (C1), (C2). 7. After completing attachment of tray 1, with tray 1's complete-open state, make sure that mutual position shown in the portion E's enlarged illustration is being satisfied. If it does not, the adjustment must be made again from the beginning.

	V	H				
6	TRACKING BALANCE ADJUSTMENT					
	0.5V/div	5 msec/div	TP1 Pin 2 (TRK. ERR)	VR5 (TRK. BAL)		- Set the test disc. - Set to test mode (see page 46). - Press the MANUAL SEARCH FWD (▶▶) key to position the carriage near the center of the disc. - Press the TRACK FWD (▶▶) key and then the PLAY (▶) key to cause the disc to rotate. - Observe the waveform output by TP1 Pin 2 TRK.ERR (tracking error) on the oscilloscope and adjust VR5 TRK. BAL (tracking balance) so that the DC component disappears from the tracking error signal.
				$A \neq B$		$A = B$
	Photo 9-4. With DC component			Photo 9-5. Without DC component		
7	TANGENTIAL ADJUSTMENT					
					- Set to test mode (see page 46). - Open tray 1 and set the disc. - Close tray 1. - Press the MANUAL SEARCH FWD (▶▶) key to position the pickup at the outermost track. - Rotate gear-pulley by hand in the direction indicated by the arrow and move tray 2 up so that the tangential adjustment screw section becomes visible. - Insert a hexagonal wrench into the tangential adjustment screw section from the right-aslant in the rear of mechanism. - Press the MANUAL SEARCH REV (◀◀) key to position the pickup somewhere at the middle of the tracks. - Press the TRACK FWD (▶▶) key, PLAY (▶) key, and PAUSE (■) key in that order to close all the servos (the pause indicator will illuminate).

	V	H				
		200 ns/div	TP1 Pin 1 (RF output)	Tangential adjustment screw	Sharpest possible eye pattern	- Observe the waveform output by TP1 Pin 1 (RF output) on the oscilloscope and adjust the tangential adjustment screw to achieve the sharpest possible eye pattern. - The correct adjustment point is halfway between the two points where the eye pattern becomes blurred when rotating the tangential adjustment screw clockwise and then counterclockwise. When the whole waveform becomes clear, concentrate on sharpening the fine lines forming the diamond shape at the center of the eye pattern (see Photo 9-6.). Adjust until the diamond shape consists of single thin lines.
TP1 10k Ω Pin 1 (RF) Pin 4 (GND)  Fig. 9-12. Note: Use a hexagonal wrench to keep the pickup in raised position while performing this adjustment.

10	VCO FREE-RUN FREQUENCY ADJUSTMENT					
			TP2 Pin 2 (PLCK)	VR8 (VCO. ADJ)	4.275 ± 0.025 MHz	• Set to test mode (see page 46). • Short-circuit the ASY and GND jumpers with ⊖ screwdriver or similar tool (see Fig. 9-1.). • Connect a frequency counter capable of measuring frequencies of 10 MHz and above to the PLCK jumper. • Adjust VR8 VCO. ADJ (VCO free-run adjustment) so that the frequency counter reading becomes 4.275 ± 0.025 MHz.
11	CONFIRMATION OF S CHARACTER (FOCUS ERROR)					
			TP1 Pin 6 (FCS. ERR)			• Set to test mode (see page 46). • Short-circuit TP1 Pin 5 FCS. IN (focus in) and Pin 4 GND. • Observe the waveform output by TP1 Pin 6 FCS. ERR (focus error) when pressing the TRACK FWD (▶▶) key.

9.6 RÉGLAGE

Les éléments à régler pour cette unité sont indiqués ci-dessous. Les réglages doivent être effectués dans l'ordre où ils sont indiqués. L'opération d'ouverture/fermeture (OPEN/CLOSE) pour le plateau de disc 2 ne pouvant pas être effectuée pendant le mode d'essai, utiliser le plateau 1 pour les réglages.

• Éléments à régler et à contrôler

1. Réglage du décalage de suivi de piste, du décalage de focalisation et du décalage RF
2. Réglage du niveau RF
3. Contrôle de la puissance de la diode laser (LD)
4. Contrôle du verrouillage de focalisation et du verrouillage de moyeu
5. Réglage du réseau
6. Réglage de l'équilibrage du suivi de piste
7. Réglage tangentiel
8. Réglage du gain de focalisation
9. Réglage du gain de suivi de piste
10. Réglage de la fréquence continue du VCO
11. Vérification de la caractéristique S (erreur de focalisation)

• Matériel de mesure

1. Oscilloscope double trace
2. Appareil de mesure pour puissance laser
3. Disc d'essai (YEDS-7)
4. Filtre de réglage pour gain de boucle
5. Générateur de signal
6. Fréquencemètre
7. Outillage général divers

• Mode d'essai

Méthodes de réglage et d'annulation du mode d'essai

- (1) Pour régler le mode d'essai, activer (ON) le contacteur d'alimentation (S707) tout en maintenant enfoncé le contacteur de mode d'essai (S1).
- (2) Le mode d'essai est annulé en désactivant (OFF) le contacteur d'alimentation.

Les fonctions des touches dans le mode d'essai sont indiquées dans le tableau 9-1.

• Résistances variables (VR) de réglage et leurs noms

- VR1: Puissance laser
 VR2: Décalage RF (RF. OFS)
 VR3: Gain de focalisation (FCS. GAN)
 VR4: Gain de suivi de piste (TRK. GAN)
 VR5: Équilibrage de suivi de piste (TRK. BAL)
 VR6: Décalage de focalisation (FCS. OFS)
 VR7: Décalage de suivi de piste (TRK. OFS)
 VR8: Réglage du VCO (VCO. ADJ)

Points de réglage

Fig. 9-1.

Dans le mode d'essai, les circuits d'asservissement sont fermés et ouverts individuellement. Par conséquent, les circuits d'asservissement doivent être fermés l'un après l'autre (séquentiellement) afin de régler l'unité dans le mode de lecture (PLAY) normal. Noter également que pendant le mode d'essai, l'unité ne passe pas dans le mode de lecture (PLAY) lorsque seule la touche de PAUSE (||) est enfoncée.

Exemple: Commutation du mode d'arrêt (STOP) au mode de lecture (PLAY).

* Dans le mode d'essai, les circuits d'asservissement doivent être fermés séquentiellement.

• Fonctions des touches dans le mode d'essai

Symbole	Désignation de touche	Fonction pendant le mode d'essai	Description
▶▶	TRACK FWD	Asservissement de focalisation fermé	Fait s'allumer la diode laser et soulève/abaisse l'actionneur de focalisation pour fermer l'asservissement de focalisation. Après la fermeture du plateau de disc 1, le plateau est amené sur la position de lecture (PLAY).
▶	PLAY	Asservissement de moyeu fermé	Ferme l'asservissement dans le mode CLV-A après le démarrage du moteur de moyeu.
	PAUSE	Asservissement de suivi de piste fermé/ouvert	Réalise l'opération de bascule; ferme l'asservissement de suivi de piste et règle sur le mode de lecture (PLAY) lorsque la touche est enfoncée (si les asservissements de focalisation et de moyeu sont fermés) et le voyant de PAUSE s'allume; ouvre l'asservissement de suivi de piste lorsqu'elle est de nouveau enfoncée.
◀◀	MANUAL SEARCH REV	Retour du chariot (mouvement vers l'intérieur)	Déplace le chariot rapidement (3 cm/s.) vers le centre du disc. Comme il n'y a pas de mécanisme de sécurité pour arrêter le chariot, relâcher la touche lorsque le chariot atteint la piste la plus intérieure.
▶▶	MANUAL SEARCH FWD	Avance du chariot (mouvement vers l'extérieur)	Déplace le chariot rapidement (3 cm/s.) vers le bord extérieur du disc. Comme il n'y a pas de mécanisme de sécurité pour arrêter le chariot, relâcher la touche lorsque le chariot atteint la piste la plus extérieure.
■	STOP	Arrêt	Arrête tous les asservissements et ramène le système à son état initial.
▲	OPEN/CLOSE Disc I	Ouverture/fermeture (plateau de disc)	Ouvre et ferme le plateau de disc. Le capteur ne revient cependant pas à sa position de repos lors de l'ouverture et il reste stationnaire lors de la fermeture du plateau.

Tableau 9—1.

Etape No.	Réglage de l'oscilloscope		Points d'essai	Points de réglage	Points de contrôle/ spécifications de réglage	Méthode de réglage
	V	H				
1.	REGLAGE DU DECALAGE DE SUIVI DE PISTE, DU DECALAGE DE FOCALISATION ET DU DECALAGE RF					
			TP1 Broche 2 (TRK. ERR)	VR5 (TRK. BAL) VR7 (TRK. OFS)	Décalage de suivi de piste 45° 0V ± 50 mV	- Régler sur le mode d'essai (voir page 59). - Tourner VR5 TRK. BAL (équilibrage de suivi de piste), dans le sens inverse des aiguilles d'une montre, d'environ 45° depuis la position centrale. - Régler VR7 TRK. OFS (décalage de suivi de piste) de sorte que la tension à la broche 2 de TP1 TRK. ERR (erreur de suivi de piste) devienne 0V ± 50 mV. - Régler VR6 FCS. OFS (décalage de focalisation) de sorte que la tension à la broche 6 de TP1 FCS. ERR (erreur de focalisation) devienne 0V ± 50 mV. - Régler VR2 RF. OFS (décalage RF) de sorte que la tension de sortie RF à la broche 1 de TP1 devienne 100 mV ± 50 mV. Note: Après avoir effectué le réglage du décalage de suivi de piste, toujours effectuer "6. REGLAGE DE L'EQUILIBRAGE DE SUIVI DE PISTE".
			TP1 Broche 6 (FCS. ERR)	VR6 (FCS. OFS)	Décalage de focalisation 0V ± 50 mV	
			TP1 Broche 1 (RF output)	VR2 (RF. OFS)	Décalage RF 100 mV ± 50 mV	
2.	REGLAGE DU NIVEAU RF					
			TP1 Broche 1 (RF output)	VR1 (puissance laser)	1,5V +0,2V -0V	- Régler sur le mode d'essai (voir page 59). - Reproduire le disc d'essai, raccorder l'oscilloscope à la broche 1 de TP1 (sortie RF) et mesurer la tension c-c de la forme d'onde RF. - Régler de sorte que la tension devienne 1,5V +0,2V -0V.
3.	CONTROLE DE LA PUISSANCE DE LA DIODE LASER (LD)					
					Moins de 0,13 mW	- Régler sur le mode d'essai (voir page 59). - Appuyer sur la touche d'avance de piste (TRACK FWD) (▶▶) pour faire s'allumer la diode laser (LD). - Placer le détecteur de l'appareil de mesure pour puissance laser directement au-dessus de l'objectif et vérifier que la puissance de sortie de la diode laser ne dépasse pas 0,13 mW.

Etape No.	Réglage de l'oscilloscope		Points d'essai	Points de réglage	Points de contrôle/ spécifications de réglage	Méthode de réglage
	V	H				
4.	CONTROLE DU VERROUILLAGE DE FOCALISATION ET DU VERROUILLAGE DE MOYEU					
	V 0,5V/div.	H 100 ms. /div.	TP1 Broche 1 (sortie RF)	Présence d'une sortie RF Rotation normale (sens des aiguilles d'une montre)	• Mettre en place le disc d'essai. • Régler sur le mode d'essai (voir page 59). • Appuyer sur la touche de recherche manuelle en avant (MANUAL SEARCH FWD) (▶▶) pour amener le capteur près du centre du disc. • Observer la sortie de la broche 1 de TP1 (sortie RF) sur l'oscilloscope. Vérifier que le signal RF est sorti après avoir appuyé sur la touche d'avance de piste (TRACK FWD) (▶▶). • Appuyer sur la touche de lecture (PLAY ▶) et vérifier que le disc tourne à une vitesse constante (approx. 30 tr/mn. près du centre du disc) dans le sens normal (sens des aiguilles d'une montre); vérifier que le disc ne tourne pas trop rapidement ou dans le sens inverse des aiguilles d'une montre.	
5.	REGLAGE DU RESEAU (1) (en utilisant un disc de 8 cm)					
	 Fig. 9-2.				Note: Ce réglage ne peut être effectué qu'en utilisant un disc de 8 cm ayant des microcuvettes sur un diamètre de 75 mm. • Régler sur le mode d'essai (voir page 59). • Mettre en place le disc de 8 cm. Amener le capteur sur la piste la plus extérieure de sorte qu'il soit positionné sur les microcuvettes et que le trou de réglage du réseau du capteur soit visible par le trou dans le mécanisme d'asservissement (voir Fig. 9-2). • Appuyer en séquence sur les touches d'avance de piste (TRACK FWD) (▶▶) et de lecture (PLAY) (▶) pour fermer l'asservissement de focalisation et l'asservissement de moyeu (ne pas fermer l'asservissement de suivi de piste). • Observer la forme d'onde sortie de la broche 2 de TP1 TRK. ERR (erreur de suivi de piste) sur l'oscilloscope, en insérant un filtre passe-bas de 4 kHz (voir la Fig. 9-3).	
	 Fig. 9-3.					

Etape No.	Réglage de l'oscilloscope		Points d'essai	Points de réglage	Points de contrôle/ spécifications de réglage	Méthode de réglage
	V	H				
	0,5V/div.	5 ms./div.	TP1 Broche 2 (TRK. ERR)	Réseau Réseau	Point zéro Amplitude maximum	- Insérer un tournevis (–) dans le trou de réglage de réseau et tourner pour trouver le point zéro (voir la Photo 9 –1). - Tourner ensuite lentement le tournevis (–) dans le sens inverse des aiguilles d'une montre depuis le point zéro et régler jusqu'à ce que la forme d'onde (signal d'erreur de suivi de piste) atteigne son amplitude maximum (voir la Photo 9 –2). Note: Prendre des précautions car l'insertion de force du tournevis (–) fait flotter l'unité du capteur vers le haut. - Vérifier, finalement, qu'il n'y a pas de fluctuation majeure dans la tension c–c du signal d'erreur de suivi de piste (ne pas insérer de filtre de coupure passe–bas 4 kHz) lorsque le capteur est déplacé sur la piste la plus intérieure et lorsque le capteur est déplacé sur la piste la plus extérieure. S'il y a une différence de plus de $\pm 10\%$, rerégler en tournant la vis de réglage du réseau jusqu'au point d'amplitude maximum du signal d'erreur de suivi de piste.
5 REGLAGE DU RESEAU (2) (sans disc de 8 cm)						
	 Fig. 9-4.  Fig. 9-5.					Effectuer ce réglage lorsqu'un disc de 8 cm n'est pas disponible et que le réglage du réseau (1) ne peut pas être effectué. Déposer le plateau 1 avant d'effectuer ce réglage. Dépose du plateau 1 - Régler le plateau 1 sur la position ouverture (OPEN) - Déposer les vis C1 et C2 qui fixent le plateau dans la Fig. 9-4. - Déplacer le plateau dans la direction de la flèche de la Fig. 9-5 et en détachant la protubérance B du plateau 1, libérer l'unité en U à angle de glissement du crochet A du plateau 1. - Retirer le plateau en soulevant légèrement le côté de l'unité en U à angle de glissement.

Etape No.	Réglage de l'oscilloscope		Points d'essai	Points de réglage	Points de contrôle/spécifications de réglage	Méthode de réglage
	V	H				
						Note: Ce réglage ne peut être effectué qu'en utilisant un disc ayant des microcuvettes sur un diamètre de 115 mm maximum. Le disc d'essai (YEDS-7) ne peut pas être utilisé. - Régler sur le mode d'essai (voir page 59). - Mettre en place un disc. Amener le capteur sur la piste la plus extérieure de sorte qu'il soit positionné sur les microcuvettes et que le trou de réglage du réseau du capteur soit visible par le trou dans le mécanisme d'asservissement (voir Fig. 9-6). - Appuyer en séquence sur les touches d'avance de piste (TRACK FWD) (▶▶) et de lecture (PLAY) (▶) pour fermer l'asservissement de focalisation et l'asservissement de moyeu (ne pas fermer l'asservissement de suivi de piste). - Observer la forme d'onde sortie de la broche 2 de TP1 TRK. ERR (erreur de suivi de piste) sur l'oscilloscope, en insérant un filtre passe-bas de 4 kHz (voir la Fig. 9-7).
						Fig. 9-6.  Fig. 9-7. 
	0,5V/div.	5 ms./div.	TP1 Broche 2 (TRK.ERR)	Réseau Réseau	Point zéro Amplitude maximum	- Insérer un tournevis (-) dans le trou de réglage de réseau et tourner pour trouver le point zéro (voir la Photo 19-1). - Tourner ensuite lentement le tournevis (-) dans le sens inverse des aiguilles d'une montre depuis le point zéro et régler jusqu'à ce que la forme d'onde (signal d'erreur de suivi de piste) atteigne son amplitude maximum (voir la Photo 9-2). Note: Prendre des précautions car l'insertion de force du tournevis (-) fait flotter l'unité du capteur vers le haut. - Vérifier, finalement, qu'il n'y a pas de fluctuation majeure dans la tension c-c du signal d'erreur de suivi de piste (ne pas insérer de filtre de coupure passe-bas 4 kHz) lorsque le capteur est déplacé sur la piste la plus intérieure et lorsque le capteur est déplacé sur la piste la plus extérieure. S'il y a une différence de plus de $\pm 10\%$, rerégler en tournant la vis de réglage du réseau jusqu'au point d'amplitude maximum du signal d'erreur de suivi de piste.

	 Unité U à angle de glissement Base de guide Glisseur Partie E Repère de plateau La tête de base de guide correspond avec le repère du plateau Si incorrect, faire glisser de 2 mm environ Repère de plateau < Agrandissement de la partie E > Fig. 9-8. Base de chargement Unité U à angle de glissement Abaissier Droite Guide Plateau Engrenage synchrone Fig. 9-9. Unité U à angle de glissement Glisseur Plateau B A Fig. 9-10.					Après avoir terminé les réglages, remettre le plateau de 1 de la manière suivante. Déposer le panneau frontal précédemment monté, qui gêne la mise en place du plateau de 1. 1. Régler l'unité ensemble en U à angle de glissement sur la position la plus avancée (où l'ouverture du plateau est totale). 2. Régler le glisseur sur la position la plus avancée comme indiqué sur la Fig. 9-8. 3. Comme indiqué par la ligne en pointillés de la Fig. 9-9, insérer l'oblique de plateau 1 à la position où les trous de montage du glisseur et du plateau 1 correspondent. (S'assurer que le glisseur ne revient pas en arrière). 4. Abaisser le plateau 1 tout en le tirant sur la droite (vers le guide). Procéder ainsi tout en soutenant le glisseur d'un doigt. 5. Régler la position du plateau 1 afin que le crochet A et la protubérance B soient fixés correctement, comme indiqué sur la Fig. 10-10. De plus, s'assurer que l'engrenage synchrone s'engage bien avec l'engrenage du plateau 1. 6. S'assurer que les trous de montage du glisseur sont bien positionnés sur les trous de vis du plateau 1 et resserrer la vis C1, puis la vis C2. 7. Après avoir terminé le montage du plateau 1, ouvrir complètement le plateau 1 et vérifier si la position mutuelle indiquée sur l'illustration agrandie de la partie E est bien correcte. Sinon, les réglages doivent être recommencés depuis le début.

10.	REGLAGE DE LA FREQUENCE CONTINUELLE DU VCO					
			TP2 Broche 2 (PLCK)	VR8 (VCO. ADJ)	4,275 ± 0,025 MHz	• Régler sur le mode d'essai (voir page 59). • Court-circuiter les ponts ASY et GND avec un tournevis (–) ou un outil similaire (voir Fig. 9–1). • Raccorder un fréquencemètre capable de mesurer des fréquences de 10 MHz et plus au pont PLCK. • Régler VR8 VCO. ADJ (réglage continu du VCO) de sorte que l'indication du fréquencemètre devienne 4,275 ± 0,025 MHz.
11.	VERIFICATION DE LA CARACTERISTIQUE S (ERREUR DE FOCALISATION)					
			TP1 Broche 6 (FCS. ERR)			• Régler sur le mode d'essai (voir page 59). • Court-circuiter les broches de TP1 FCS et la broche 4 GND. • Observer la forme d'onde sortie par la broche 6 de TP1 FCS. ERR (erreur de focalisation) lorsque la touche d'avance de piste (TRACK FWD) (▶▶) est enfoncée.

9.6 AJUSTE

La lista de abajo muestra los ítems de ajuste de esta unidad. Los ajustes deben efectuarse en el orden indicado. Dado que la operación de apertura/cerrado de la bandeja de disco 2 no puede efectuarse en el modo de prueba, emplee la bandeja 1 para el ajuste.

• Ítems de ajuste y confirmación

1. Ajuste de error de seguimiento, enfoque y RF
2. Ajuste de nivel de RF
3. Confirmación de potencia del diodo laser (LD)
4. Confirmación de enclavamiento de enfoque y eje
5. Ajuste de retículo
6. Ajuste de seguimiento
7. Ajuste tangencial
8. Ajuste de ganancia de enfoque
9. Ajuste de ganancia de seguimiento
10. Ajuste de frecuencia propia del oscilador controlado por tensión
11. Confirmación de carácter S (error de enfoque)

• Equipo de medición

1. Osciloscopio de doble trazo
2. Medidor de potencia de laser
3. Disco de prueba (YEDS-7)
4. Filtro de ajuste de ganancia de bucle
5. Generador de señales
6. Contador de frecuencia
7. Herramientas de uso general

Puntos de ajuste

• Modo de prueba

Cómo establecer y cancelar el modo de prueba

- (1) Para establecer el modo de prueba, coloque el interruptor de encendido (S707) en ON mientras mantiene el interruptor de modo de prueba (S1) presionado.
- (2) Para cancelar el modo de prueba, coloque el interruptor de encendido en OFF.

Las funciones de las teclas en el modo de prueba están indicadas en la tabla 9-1.

• Resistores variables (VR) de ajuste y sus nombres

- VR1: Potencia de laser
 VR2: Error de RF (RF. OFS)
 VR3: Ganancia de enfoque (FCS. GAN)
 VR4: Ganancia de seguimiento (TRK. GAN)
 VR5: Equilibrio de seguimiento (TRK. BAL)
 VR6: Error de enfoque (FCS. OFS)
 VR7: Error de seguimiento (TRK. OFS)
 VR8: Frecuencia propia de oscilador controlado por tensión (VCO. ADJ)

En el modo de prueba, los servos se abren y cierran independientemente. Por lo tanto, deben cerrarse uno a la vez (consecutivamente) para que la unidad permanezca en el modo de reproducción normal. Advierta también que en el modo de prueba la unidad no entrará en el modo de reproducción si se presiona solamente la tecla de pausa (||).

Ejemplo: Cambiando del modo de parada al de reproducción

* En el modo de prueba, los servos deben activarse en forma consecutiva.

• Funciones de las teclas en el modo de prueba

Símbolo	Nombre de la tecla	Función en el modo de prueba	Descripción
▶▶	TRACK FWD	Cerrar el servo de enfoque	Enciende el diodo laser y levanta/baja el actuador de enfoque para cerrar el servo de enfoque. Después de cerrar la bandeja de disco 1, la bandeja se mueve a la posición de reproducción.
▶	PLAY	Cerrar el servo de eje	Cierra el servo en el modo CLV-A después de arrancar el motor de eje.
	PAUSE	Abrir/cerrar el servo de seguimiento	Efectúa una operación de conexión oscilante: Cierra el servo de seguimiento y establece el modo de reproducción cuando se la presiona una vez (siempre y cuando los servos de enfoque y eje estén cerrados), iluminándose al mismo tiempo el indicador PAUSE, y abre el servo de seguimiento cuando se la presiona nuevamente.
◀◀	MANUAL SEARCH REV	Transportar el carro hacia el centro	Mueve el carro rápidamente (3 cm/s) hacia el centro del disco. Dado que no hay un sistema de seguridad para detener el carro, suelte la tecla cuando el carro llegue a la última pista del disco.
▶▶	MANUAL SEARCH FWD	Transportar el carro hacia afuera	Mueve el carro rápidamente (3 cm/s) hacia el borde exterior del disco. Dado que no hay un sistema de seguridad para detener el carro, suelte la tecla cuando éste llegue al borde exterior del disco.
■	STOP	Parada	Detiene todos los servos y vuelve el sistema a su estado inicial.
▲	OPEN/CLOSE Disc I	Abrir/cerrar la bandeja de disco	Abre y cierra la bandeja de disco. El captador no vuelve a la posición de reposo al abrir la bandeja, y permanece quieto al cerrarla.

Tabla 9-1.

Paso N°	Ajuste del osciloscopio		Puntos de confirmación	Puntos de ajuste	Ítems de confirmación/ Especificaciones de ajuste	Procedimiento de ajuste
	V	H				
1	AJUSTE DE ERROR DE SEGUIMIENTO, ENFOQUE Y RF					
			Patilla 2 de TP1 1 (TRK. ERR) Patilla 6 de TP1 1 (FCS. ERR) Patilla 1 de TP1 (RF. output)	VR5 (TRK. BAL) VR7 (TRK. OFS) VR6 (FCS. OFS) VR2 (RF. OFS)	Error de seguimiento 45° 0V ± 50 mV Error de enfoque 0V ± 50 mV Error de RF 100 mV ± 50 mV	- Establezca el modo de prueba (vea la página 72). - Gire VR5 TRK. BAL (equilibrio de seguimiento) en sentido antihorario a unos 45° de la posición central. - Ajuste VR7 TRK. OFS (error de seguimiento) de modo que la tensión de error de seguimiento (TRK. ERR) en la patilla 2 de TP1 sea 0V ± 50 mV. - Ajuste VR6 FCS. OFS (error de enfoque) de modo que la tensión de error de enfoque (FCS. ERR) en la patilla 6 de TP1 sea 0V ± 50 mV. - Ajuste VR2 RF. OFS (error de RF) de modo que la tensión de salida de RF en la patilla 1 de TP1 sea 100 mV ± 50 mV. Nota: Después de ajustar el error de seguimiento, no deje de ajustar el equilibrio de seguimiento como se indica en la sección 6.
2	AJUSTE DE NIVEL DE RF					
			Patilla 1 de TP1 (RF output)	VR1 (potencia de laser)	1,5V +0,2V -0V	- Establezca el modo de prueba (vea la página 72). - Reproduzca el disco de prueba, conecte el osciloscopio a la patilla 1 de TP1 (salida de RF) y mida la tensión p-p de la onda de RF. - Ajuste de modo que la tensión sea 1,5V +0,2V -0V.
3	CONFIRMACION DE POTENCIA DE DIODO LASER (LD)					
					Menor que 0,13 mW	- Establezca el modo de prueba (vea la página 72). - Presione la tecla TRACK FWD (▶▶) para encender el diodo laser. - Coloque el sensor del medidor de potencia de laser exactamente sobre la lente del objetivo y confirme que la potencia de salida del laser no exceda 0,13 mW.

Paso N°	Ajuste del osciloscopio		Puntos de confirmación	Puntos de ajuste	Items de confirmación/ Especificaciones de ajuste	Procedimiento de ajuste
	V	H				
4	CONFIRMACION DE ENCLAVAMIENTO DE ENFOQUE Y EJE					
	V 0,5V/div.	H 100 ms /div.	Patilla 1 de TP1 (salida de RF)	Existe salida de RF Rotación normal (en sentido horario)		• Coloque el disco de prueba. • Establezca el modo de prueba (vea la página 72). • Presione la tecla MANUAL SEARCH FWD (▶▶) y mueva el captador hasta cerca del centro del disco. • Observe la salida de la patilla 1 de TP1 en el osciloscopio. Confirme que la señal de RF sea emitida después de presionar la tecla TRACK FWD (▶▶). • Presione la tecla PLAY (▶) y confirme que el disco gire a velocidad constante (aprox. 30 rpm con el captador cerca del centro del disco) en el sentido normal (horario); asegúrese de que el disco no gire demasiado rápido ni en sentido opuesto.
5	AJUSTE DE RETICULO (1) (empleando un disco de 8 cm)					
					Nota: Este ajuste sólo puede efectuarse usando un disco de 8 cm con hoyos sobre un diámetro de 75 mm. • Establezca el modo de prueba (vea la página 72). • Coloque el disco de 8 cm. Mueva el captador a la pista exterior, ubicándolo sobre la zona con hoyos de modo que el orificio de ajuste de retículo de captador pueda verse por el orificio del servomecanismo (vea la Fig. 9-2). • Presione las teclas TRACK FWD (▶▶) y PLAY (▶) consecutivamente para cerrar los servos de enfoque y eje (no cierre el servo de seguimiento). • Observe la forma de onda emitida por la patilla 2 de TP1 (TRK. ERR, error de seguimiento) en el osciloscopio, insertando un filtro de paso bajo de 4 kHz (vea la Fig. 9-3).	
						
	Fig. 9-3.					

Paso N°	Ajuste del osciloscopio		Puntos de confirmación	Puntos de ajuste	Items de confirmación/ Especificaciones de ajuste	Procedimiento de ajuste
	V	H				
	0,5 V/div.	5 ms/div.	Patilla 2 de TP1 (TRK.ERR)	Retículo Retículo	Punto cero Amplitud máxima	• Inserte un destornillador en el orificio de ajuste del retículo, y gírelo hasta encontrar el punto cero (vea la Foto 9 -1). • A continuación, gire lentamente el destornillador en sentido antihorario a partir del punto cero hasta que la forma de onda (señal de error de seguimiento) adquiera amplitud máxima (vea la Foto 9 -2). Nota: Inserte el destornillador cuidadosamente, pues hacerlo con demasiada fuerza haría levantar la unidad de captador. • Finalmente, confirme que no hayan mayores fluctuaciones en la tensión p-p de la señal de error de seguimiento (sin insertar el filtro de paso bajo de 4 kHz) al mover el captador a la pista interior o a la exterior. Si hubiera una diferencia mayor que $\pm 10\%$, repita el ajuste girando el tornillo de ajuste de retículo al punto de amplitud máxima de la señal de error de seguimiento.
5 AJUSTE DE RETICULO (2) (sin disco de 8 cm)						
	 Fig. 9-4.				Utilice este método cuando no disponga de un disco de 8 cm y el procedimiento de ajuste de retículo (1) no sea posible. Antes de comenzar, extraiga la bandeja 1. • Extracción de la bandeja 1. 1. Poner la bandeja en la posición abierta (OPEN). 2. Sacar los tornillos (C1) y (C2) sujetando la bandeja como se ilustra en la Fig. 9 -4. 3. Mover la bandeja en la dirección de la flecha como se indica en la Fig. 9-5 y, retirando la parte sobresaliente (B) de la misma, desenganchar la pieza en U del gancho (A). 4. Tirar de la bandeja levantando ligeramente la pieza en U de la corredera.	 Fig. 9-5.

Paso N°	Ajuste del osciloscopio		Puntos de confirmación	Puntos de ajuste	Items de confirmación/ Especificaciones de ajuste	Procedimiento de ajuste
	V	H				
						Nota: El disco empleado para este ajuste debe tener hoyos hasta un diámetro de 115 mm. El disco de prueba (YEDS-7) no puede utilizarse. • Establezca el modo de prueba (vea la página 72). • Coloque el disco. Mueva el captador a la pista exterior, ubicándolo sobre la zona con hoyos de modo que el orificio de ajuste de retículo de captador pueda verse por el orificio del servomecanismo (vea la Fig. 9-6). • Presione las teclas TRACK FWD (▶▶) y PLAY (▶) consecutivamente para cerrar los servos de enfoque y eje (no cierre el servo de seguimiento). • Observe la forma de onda emitida por la patilla 2 de TP1 (TRK.ERR, error de seguimiento) en el osciloscopio, insertando un filtro de paso bajo de 4 kHz (vea la Fig. 9-7).
						• Inserte un destornillador en el orificio de ajuste del retículo, y gírelo hasta encontrar el punto cero (vea la Foto 9-1). • A continuación, gire lentamente el destornillador en sentido antihorario a partir del punto cero hasta que la forma de onda (señal de error de seguimiento) adquiera amplitud máxima (vea la Foto 9-2). Nota: Inserte el destornillador cuidadosamente, pues hacerlo con demasiada fuerza haría levantar la unidad de captador. • Finalmente, confirme que no hayan mayores fluctuaciones en la tensión p-p de la señal de error de seguimiento (sin insertar el filtro de paso bajo de 4 kHz) al mover el captador a la pista interior o a la exterior. Si hubiera una diferencia mayor que $\pm 10\%$, repita el ajuste girando el tornillo de ajuste de retículo al punto de amplitud máxima de la señal de error de seguimiento.

	V	H				
						Después de terminar todos los ajustes, fijar la bandeja 1 de la manera siguiente: En primer lugar, desmontar el panel frontal, pues impide el montaje de la bandeja 1. 1. Poner la pieza en U en la posición más avanzada (bandeja totalmente abierta). 2. Poner la corredera en la posición más avanzada como se ilustra en la Fig. 9-8. 3. Como ilustra la línea punteada en la Fig. 9-9, introducir la bandeja hasta la posición en que sus agujeros coincidan con los de la corredera (asegúrese de que la corredera no se deslice hacia atrás). 4. Bajar la bandeja empujándola hacia la derecha (hacia la guía), mientras se sostiene la corredera desde abajo con un dedo. 5. Ajustar la posición de la bandeja de manera que el gancho (A) y la parte sobresaliente (B) queden en la posición correcta según se ilustra en la Fig. 9-10. Comprobar que el engranaje de sincronización engrana correctamente con el de la bandeja. 6. Comprobar que los agujeros de montaje de la corredera coinciden con los del centro de la bandeja. Apretar los tornillos (C1) y (C2) en este orden. 7. Después de terminar el montaje, abrir completamente la bandeja y comprobar que las piezas ocupan las posiciones ilustradas en la porción E ampliada. Si la posición no es satisfactoria, se debe repetir el ajuste nuevamente desde el comienzo.

	V	H				
		200 ns/div.	TP1 Patilla 1 (salida de RF)	Tornillo de ajuste tangencial	Imagen de prueba más nítida posible	• Observe la forma de onda emitida por la patilla 1 de TP1 (salida de RF) en el osciloscopio y ajuste el tornillo de ajuste tangencial hasta obtener la imagen de prueba más nítida posible. • El punto de ajuste correcto se encuentra entre los dos puntos en que la imagen de prueba se vuelve borrosa al girar el tornillo de ajuste tangencial en sentido horario y después en sentido antihorario. Cuando la forma de onda se aclare en su totalidad, trate de hacer nítidas las líneas finas que forman la figura de diamante en el centro de la imagen de prueba (vea la Foto 9-6). Ajuste hasta que la figura de diamante esté compuesta de líneas finas simples.

Fig. 9 -12.

Nota: Emplee una llave hexagonal para mantener el captador levantado durante este ajuste.

10.4 ELECTRICAL PARTS LIST

NOTES:

- Parts without part number cannot be supplied.
- Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω	56×10^1	561.....	RD1/4PS	5	6	1	J
47kΩ	47×10^3	473.....	RD1/4PS	4	7	3	J
0.5Ω	0R5.....		RN2H	0	5		K
1Ω	010.....		RSIP	0	1	0	K

CONNECT assembly

No parts are supplied with the connection assembly.

10.5 ADJUSTMENTS

Fig.10.1. Adjustment location

Fig.10.2. Adjustment location

- Adjustment and measurement are usually made in the AF Ass'y, unless specified otherwise.
- Set the graphic equalizer to FLAT. Depending on the country of destination, the unit may be equipped with a MIC mixing volume control.
If a MIC mixing volume control is built in, please set to the MIN position.
- The function should always be set to "TAPE" unless otherwise specified.

Adjustment of Mechanical System

- Test tape: STD-301 (3 kHz, 30 min.)
- Setting of double speed mode: Short-circuit TP801 and TP802 of the Control Ass'y. To release the mode, break the short circuit.

1. Adjustment of tape speed							
No.	Mode	Input signal & Test tape	Adjustment location		Measuring location	Adjustment value	Remarks
1	PLAY	Playback the STD-301 tape to 3 kHz.	Deck I	DECK CTRL Ass'y VR801	TP-L (Lch)	Press the PLAY SW and adjust the frequency to 3010 Hz $\pm$ 10 Hz. Make sure that the wow and flutter is within 0.2 %.	
2	PLAY (Double speed mode)			—		Press the PLAY SW in double speed mode and confirm that the frequency is 6000 Hz $\pm$ 1000 Hz. Note down the figure.	Release the double speed mode after adjustment.
3	PLAY (Double speed mode)		Deck II	DECK CTRL Ass'y VR803	TP-R (Rch)	Press the PLAY SW in double speed mode and adjust the frequency to be within $\pm$ 30 Hz of the figure recorded at step No. 2.	Release the double speed mode after adjustment.
4	PLAY			DECK CTRL Ass'y VR802		Press the PLAY SW and adjust the frequency to 3010 Hz $\pm$ 10 Hz. Make sure that the wow and flutter is within 0.2 %.	

Adjustment of Electric System

■ Check and conduct the following before adjusting the electric system.

1. Adjustment of tape speed has been completed.
2. Clean and demagnetize the head using a head eraser.
3. When measured, the level should be 0 dBV = 1 Vrms.
4. Use side A of the specified tape for adjustment.
STD-331B: For adjustment of playback system.
STD-630: NORMAL blank tape
STD-620: CrO₂ blank tape
STD-610: METAL blank tape
5. Prepare the following measuring devices:
AC millivoltmeter, Low-frequency oscillator, Attenuator, Oscilloscope
6. Adjust both L and R channels, unless specified otherwise.
7. Set the DOLBY NR switches to OFF, unless specified otherwise.
8. Warm up the unit for several minutes before adjustment. Especially before adjusting the frequency characteristics of recording and playback, warm up for 3 to 5 minutes in REC/PLAY mode.
9. Make sure to follow the proper order of the adjustment procedure. Any change in the order may cause an imperfect result.

List of Adjustment

Deck I

1. Head azimuth adjustment
2. Playback level adjustment

Deck II

1. Head azimuth adjustment
2. Playback level adjustment
3. Adjustment frequency characteristics of recording/playback
4. Recording level adjustment

Checking of Decks II

1. Make sure the ALC is operating properly.

Fig.10.3. Test tape STD-331B

Fig.10.4. Head azimuth adjustment

Fig.10.5. Frequency characteristics

• Head Adjustment of Deck I

- Deck I is provided with an automatic tape selector mechanism.
- Note: Do not switch over FWD and REV while the driver is inserted.

1. Head Azimuth Adjustment

Proce-dure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331B (10 kHz, -20 dB).	Head azimuth ad-justment screw (Fig.10-4)	TP-L (Lch) TP-R (Rch)	Maximum playback signal level	Lock the screw with screw lock after com-pleting adjustment.

2. Playback Level Adjustment

- Be sure to make a careful adjustment, as the adjustment determines the DOLBY NR level for playback.

Proce-dure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331B (315 Hz, 0 dB).	VR453 (Lch) VR454 (Rch)	TP-L (Lch) TP-R (Rch)	-6.7 dBV	

• Head Adjustment of Deck II

- Deck II is provided with an automatic tape selector mechanism.
- Note: Do not switch over FWD and REV while the driver is inserted.

1. Head Azimuth Adjustment

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331B (10 kHz, -20 dB).	Head azimuth adjustment screw (Fig.10-4)	TP-L (Lch) TP-R (Rch)	Maximum playback signal level	Lock the screw with screw lock after completing adjustment.

2. Playback Level Adjustment

- Be sure to make a careful adjustment, as the adjustment determines the DOLBY NR level for playback.

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	PLAY	Playback the test tape STD-331B (315 Hz, 0 dB).	VR451 (Lch) VR452 (Rch)	TP-L (Lch) TP-R (Rch)	-6.7 dBV	

3. Adjustment of frequency characteristics of recording/playback

- As this procedure is for adjustment of the recording bias, be careful not to increase the distortion rate by under-adjusting the bias.

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	REC	Load the test tape STD-630 and set to record mode.	—	Area between ① and ② (A F Ass'y) shown in Fig.10-1.	Confirm that the oscillation frequency is 105 kHz $\pm$ 1 kHz.	If the adjustment value cannot be set within the specification, adjust the T581.
2	NORM	REC	Apply a signal of 315 Hz to the VIDEO input terminal and set the function to "VIDEO".	Input signal level	TP-L (Lch) TP-R (Rch)	-27.7 dBV	
3	NORM	REC/PLAY	Record and playback the test tape STD-630 (315 Hz and 10 kHz).	VR411 (Lch) VR412 (Rch)	TP-L (Lch) TP-R (Rch)	Repeat the correction so that the playback level of 10 kHz remains 0 $\pm$ 0.5 dB in relation to 315 Hz.	

4. Recording Level Adjustment

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Adjustment value	Remarks
1	NORM	REC	Apply a signal of 315 Hz to the VIDEO input terminal and set the function to "VIDEO".	Input signal level	TP-L (Lch) TP-R (Rch)	-7.7 dBV	
2	NORM	REC/PLAY	Record and playback the test tape STD-630 (315 Hz).	VR521 (Lch) VR522 (Rch)	TP-L (Lch) TP-R (Rch)	Repeat the recording and correction so that the playback level of 315 Hz is -6.7 dBV.	

• Checking Procedure for Deck II

1. Action of ALC

Pro-cedure	Tape selector	Mode	Input signal/test tape	Adjustment location	Measuring location	Checking value	Remarks
1	NORM	REC	Apply a signal of 315 Hz to the VIDEO input terminal and set the function to "VIDEO".	Input signal level	TP-L (Lch) TP-R (Rch)	-7.7 dBV	
2				+10 dB against the input level of step 1.		-2.7 dBV $\pm$ 2.5 dB	

10.5 RÉGLAGE

Fig.10.1. Points de réglage

Fig.10.2. Points de réglage

- Les réglages et les mesures sont généralement faits dans l'ensemble AF, à moins de spécification contraire.
- Régler l'égaliseur graphique sur FLAT, selon le pays de destination, l'unité peut être équipée d'une commande de volume de mixage de micro.
Si une commande de volume de mixage de micro est incorporée, prière de la régler à la position minimum.
- La fonction doit toujours être réglée sur "TAPE" à moins de spécification contraire.

Réglages mécaniques

- Bande d'étalonnage: STD-301 (3 kHz, 30 mn.)
- Réglage du mode de vitesse double: Court-circuiter TP801 et TP802 de l'ensemble de commande. Pour libérer le mode, ouvrir le court-circuit.

1. Réglage de la vitesse de bande							
No.	Mode	Signal appliquée / bande d'étalonnage	Emplacement du réglage		Emplacement du point de mesure	Valeur relevée	Obsrvations
1	PLAY	Reproduire la bande STD-301 par 3 kHz.	Platine I	ENSEMBLE COMM. PLATINE VR801	TP-L (can. G)	Appuyer sur le contacteur PLAY et régler la fréquence sur 3.010 Hz $\pm$ 10 Hz. Vérifier que le pleurage et scintillement est dans la limite de 0,2%.	
2	PLAY (Mode de vitesse double)			—		Appuyer sur le contacteur PLAY dans le mode de vitesse double et vérifier que la fréquence est 6.000 Hz $\pm$ 1.000 Hz. Noter le chiffre.	Libérer le mode de vitesse double après le réglage.
3	PLAY (Mode de vitesse double)		Platine II	ENSEMBLE COMM. PLATINE VR803	TP-R (can. D)	Appuyer sur le contacteur PLAY dans le mode de vitesse double et régler la fréquence pour qu'elle soit dans la limite de $\pm$ 30 Hz du chiffre noté dans l'étape No. 2.	Libérer le mode de vitesse double après le réglage.
4	PLAY			ENSEMBLE COMM. PLATINE VR802		Appuyer sur le contacteur PLAY et régler la fréquence sur 3.010 Hz $\pm$ 10 Hz. Vérifier que le pleurage et scintillement est dans la limite de 0,2%.	

Réglages électriques

■ Vérifier les points suivants et effectuer les opérations suivantes avant procéder aux réglages électriques.

1. Le réglage de la vitesse de bande a été complété.
2. Nettoyer et démagnétiser la tête avec un démagnétiseur de tête.
3. Lors de la mesure, le niveau doit être de 0 dBV = 1 Vepp.
4. Utiliser la face A de la bande spécifiée pour le réglage. STD-331B: Pour le réglage du système de lecture.
STD-630: Bande vierge NORMAL
STD-620: Bande vierge CrO₂
STD-610: Bande vierge METAL
5. Préparer les instruments de mesure suivants:
Millivoltmètre CA, oscillateur à basse fréquence, éatténateur et oscilloscope.
6. Régler les deux canaux L (gauche) et R (droit), sauf spécification contraire.
7. Régler les commutateurs DOLBY NR sur la position OFF, sauf spécification contraire.

8. Laisser chauffer l'appareil pendant plusieurs minutes avant le réglage. En particulier avant d'effectuer le réglage de la réponse en fréquence d'enregistrement et de lecture, laisser chauffer l'appareil pendant 3 à 5 minutes dans le mode d'enregistrement/lecture (REC/PLAY).
9. Toujours suivre l'ordre spécifié de la méthode réglage. Tout changement de l'ordre peut provoquer des résultats imparfaits.

Liste des réglages

Platine I

1. Azimut de la tête
2. Niveau de lecture

Platine II

1. Azimut de la tête
2. Niveau de lecture
3. Réponse en fréquence d'enregistrement/lecture
4. Niveau d'enregistrement

Vérification de la Platines II

1. Vérifier que le ALC fonctionne correctement.

Fig.10.3. Bande d'étalonnage STD-331B

Fig.10.4. Réglage d'azimut de la tête

LECTURE

ENREGISTREMENT

Fig.10.5. Réponse en fréquence

• Réglage de la Platine I

- La Platine I est équipée d'un mécanisme de sélection automatique de bande.
- Remarque: Ne pas commuter entre le sens avant (FWD) et le sens arrière (REV) pendant que le tournevis est inséré.

1. Réglage d'azimut de la tête

Opération	Sélecteur de bande	Mode	Signal appliqué / bande d'étalonnage	Emplacement du réglage	Emplacement du point de mesure	Valeur relevée	Observations
1	NORM	PLAY	Reproduire la bande d'étalonnage STD-331B (10 kHz, -20 dB).	Vis de réglage d'azimut de tête (Fig.10-4)	TP-L (can. G) TP-R (can. D)	Niveau maximum du signal de lecture	Une fois le réglage terminé, bloquer la vis avec un frein de vis.

2. Réglage du niveau de lecture

- Toujours effectuer un réglage minutieux, car la valeur réglée sera le niveau Dolby pour la lecture.

Opération	Sélecteur de bande	Mode	Signal appliqué / bande d'étalonnage	Emplacement du réglage	Emplacement du point de mesure	Valeur relevée	Observations
1	NORM	PLAY	Reproduire la bande d'étalonnage STD-331B (315 kHz, 0 dB)	VR453 (can. G) VR454 (can. D)	TP-L (can. G) TP-R (can. D)	-6,7 dBV	

• Réglage de la Platine II

- La Platine II est équipée d'un mécanisme de sélection automatique de bande.
- Remarque: Ne pas commuter entre le sens avant (FWD) et le sens arrière (REV) pendant que le tournevis est inséré.

1. Réglage d'azimut de la tête

Opération	Sélecteur de bande	Mode	Signal appliqué / bande d'étalonnage	Emplacement du réglage	Emplacement du point de mesure	Valeur relevée	Observations
1	NORM	PLAY	Reproduire la bande d'étalonnage STD-331B (10 kHz, -20 dB).	Vis de réglage d'azimut de tête (Fig.10-4)	TP-L (can. G) TP-R (can. D)	Niveau maximum du signal de lecture	Une fois le réglage terminé, bloquer la vis avec un frein de vis.

2. Réglage du niveau de lecture

- Toujours effectuer un réglage minutieux, car la valeur réglée sera le niveau Dolby pour la lecture.

Opération	Sélecteur de bande	Mode	Signal appliqué / bande d'étalonnage	Emplacement du réglage	Emplacement du point de mesure	Valeur relevée	Observations
1	NORM	PLAY	Reproduire la bande d'étalonnage STD-331B (315 kHz, 0 dB)	VR451 (can. G) VR452 (can. D)	TP-L (can. G) TP-R (can. D)	-6,7 dBV	

3. Réglage de la réponse fréquence d'enregistrement/lecture

- Cette opération réglant la polarisation d'enregistrement, faire attention de ne pas augmenter la distorsion par un réglage insuffisant de la polarisation.

Procédure	Sélecteur de bande	Mode	Signal appliqué / bande d'étalonnage	Emplacement du réglage	Emplacement du point de mesure	Valeur relevée	Observations
1	NORM	REC	Charger la bande d'étalonnage STD-630 et régler dans le mode d'enregistrement.	—	Partie entre ① et ② (ensemble d'enregistrement (A.F.)) indiquée sur la Fig. 10-4	Vérifier que la fréquence d'oscillation est de 105 kHz $\pm$ 1 kHz.	Si la valeur de mesurée ne peut pas être réglée dans les limites spécifiées, régler T581.
2	NORM	REC	Appliquer un signal de 315 Hz à la borne d'entrée VIDEO et régler la fonction sur "VIDEO".	Niveau du signal d'entrée	TP-L (can. G) TP-R (can. D)	-27,7 dBV	
3	NORM	REC / PLAY	Enregistrer et reproduire la bande d'étalonnage STD-630 (315 Hz et 10 kHz).	VR411 (can. G) VR412 (can. D)	TP-L (can. G) TP-R (can. D)	Répéter la correction de sorte que le niveau de lecture de 10 kHz soit de 0 $\pm$ 0,5 dB en relation avec 315 Hz.	

4. Réglage du niveau d'enregistrement

Procédure	Sélecteur de bande	Mode	Signal d'entrée / bande d'essai	Emplacement du réglage	Emplacement du point de mesure	Valeur relevée	Remarques
1	NORM	REC	Appliquer un signal de 315 Hz à la borne d'entrée VIDEO et régler la fonction sur "VIDEO".	Niveau du signal d'entrée	TP-L (can. G) TP-R (can. D)	-7,7 dBV	
2	NORM	REC / PLAY	Enregistrer et reproduire la bande d'essai STD-630 (315 Hz).	VR521 (can. G) VR522 (can. D)	TP-L (can. G) TP-R (can. D)	Répéter l'enregistrement et la correction de sorte que le niveau de lecture de 315 Hz soit de -6,7 dBV.	

• Vérification de la Platine II

1. Action du ALC

Opération	Sélecteur de bande	Mode	Signal appliqué / bande d'étalonnage	Emplacement du réglage	Emplacement du point de mesure	Valeur relevée	Observations
1	NORM	REC	Appliquer un signal de 315 Hz à la borne d'entrée VIDEO et régler la fonction sur "VIDEO".	Niveau du signal d'entrée	TP-L (can. G) TP-R (can. D)	-7,7 dBV	
2				+ 10 dB par rapport au niveau d'entrée de l'étape 1.		-2,7 dBV $\pm$ 2,5 dB	

10.5 AJUSTE

Fig.10.1. Punto de ajuste

Fig.10.2. Punto de ajuste

- El ajuste y la medición se realizarán normalmente en el conjunto AF, a menos que se especifique otra cosa.
- Desactive (FLAT) el ecualizador gráfico. Dependiendo del país de destino, el aparato puede estar provisto de un control de volumen de mezcla microfónica (MIC).
Se está provisto de un control de volumen de mezcla microfónica (MIC), ajústelo a la posición MIN.
- La función deberá estar ajustada siempre a "TAPE", a menos que se especifique otra cosa.

Ajuste del sistema mecánico

- Cinta de prueba: STD-301 (3 kHz, 30 min)
- Ajuste del modo de velocidad doble: Cortocircuite TP801 y TP802 del conjunto de control. Para desactivar el modo, abra el cortocircuito.

1. Ajuste de la velocidad de la cinta						
Nº	Modo	Señal de entrada/ cinta de prueba	Punto de ajuste		Punto de medición	Observaciones
1	PLAY	Reproducción de la cinta STDy301 a 3 kHz	Sección I	VR801 del conjunto DECK CTRL	TP-L (canal izquierdo)	Presione PLAY SW y ajuste la frecuencia a 3010 Hz $\pm$ 10 Hz. Cerciórese de que la fluctuación y el efecto de trémolo estén dentro de los límites del 0,2%.
2	PLAY (Modo de velocidad doble)			—		Después del ajuste, desactive el modo de velocidad doble.
3	PLAY (Modo de velocidad doble)		Sección II	VR803 del conjunto DECK CTRL	TP-R (canal derecho)	Después del ajuste, desactive el modo de velocidad doble.
4	PLAY			VR802 del conjunto DECK CTRL		Presione PLAY SW y ajuste la frecuencia a 3010 Hz $\pm$ 10 Hz. Cerciórese de que la fluctuación y el efecto de trémolo estén dentro de los límites del 0,2%.

Ajuste del sistema eléctrico

■ Antes de ajustar el sistema eléctrico, compruebe y realice lo siguiente.

1. El ajuste de la velocidad de la cinta ha finalizado.
2. Limpie y desmagnetice la cabeza empleando un desmagnetizador de cabezas.
3. Cuando se mida, el nivel de nivel debe ser de 0 dBV = 1V rms.
4. Emplee el lado A de la cinta especificada para realizar el ajuste.
STD-331B: Para ajuste del sistema de reproducción.
STD-630: Cinta en blanco NORMAL
STD-620: Cinta en blanco de CrO2
SRD-610: Cinta en blanco de METAL
5. Prepare los dispositivos de medición siguientes:
Milivoltímetro de AC, oscilador de baja frecuencia, atenuador, y osciloscopio
6. Ajuste ambos canales, izquierdo y derecho, a menos que se especifique otra cosa.
7. Ponga los interruptores DOLBY NR en OFF, a menos que se especifique otra cosa.

8. Antes del ajuste, deje que la unidad se caliente durante varios minutos.
Especialmente antes de ajustar las características de frecuencia de grabación y reproducción, deje que se caliente durante 3 a 5 minutos en el modo REC/PLAY.
9. Cerciórese de seguir el orden apropiado del procedimiento de ajuste. Cualquier cambio en el orden podría causar un resultado imperfecto.

Lista de ajuste

Sección I

1. Azimut de la cabeza
2. Nivel de reproducción

Sección II

1. Azimut de la cabeza
2. Nivel de reproducción
3. Características de frecuencia de grabación/reproducción
4. Nivel de grabación

Comprobación de la secciones I y II

1. Cerciórese de que ALC esté funcionando adecuadamente.

Fig.10.3. Cinta de prueba STD-331B

Fig.10.4. Ajuste del azimut de la cabeza

REPRODUCCIÓN**CRABACIÓN**

Fig.10.5. Características de frecuencia

• Ajuste de la sección I

- La sección I dispone de un mecanismo selector automático de cinta.
- Nota: No cambie a FWD ni a REV mientras el destornillador esté insertado.

1. Ajuste azimutal de la cabeza

Procedimiento	Selector de cinta	Modo	Señal de entrada / cinta de prueba	Punto de ajuste	Punto de medición	Valor de ajuste	Observaciones
1	NORM	PLAY	Ponga la cinta de prueba STD-331B en reproducción (10 kHz, -20 dB).	Tornillo de ajuste azimutal de la cabeza (Fig.10-4)	TP-L (canal izquierdo) TP-R (canal derecho)	Nivel máximo de la señal de reproducción	Bloguee el tornillo con bloqueador de tornillos después de haber terminado el ajuste.

2. Ajuste del nivel de reproducción

- Tenga mucho cuidado durante el ajuste, ya que el valor ajustado será el nivel Dolby fijado para reproducción.

Procedimiento	Selector de cinta	Modo	Señal de entrada / cinta de prueba	Punto de ajuste	Punto de medición	Valor de ajuste	Observaciones
1	NORM	PLAY	Ponga la cinta de prueba STD-331B en reproducción (315 Hz, 0 dB).	VR453 (canal izquierdo) VR454 (canal derecho)	TP-L (canal izquierdo) TP-R (canal derecho)	-6,7 dBV	

• Ajuste de la sección II

- La sección II dispone de un mecanismo selector automático de cinta.
- Nota: No cambie a FWD ni a REV mientras el destornillador esté insertado.

1. Ajuste azimutal de la cabeza

Procedimiento	Selector de cinta	Modo	Señal de entrada / cinta de prueba	Punto de ajuste	Punto de medición	Valor de ajuste	Observaciones
1	NORM	PLAY	Ponga la cinta de prueba STD-331B en reproducción (10 kHz, -20 dB).	Tornillo de ajuste azimutal de la cabeza (Fig.10-4)	TP-L (canal izquierdo) TP-R (canal derecho)	Nivel máximo de la señal de reproducción	Bloguee el tornillo con bloqueador de tornillos después de haber terminado el ajuste.

2. Ajuste del nivel de reproducción

- Tenga mucho cuidado durante el ajuste, ya que el valor ajustado será el nivel Dolby fijado para reproducción.

Procedimiento	Selector de cinta	Modo	Señal de entrada / cinta de prueba	Punto de ajuste	Punto de medición	Valor de ajuste	Observaciones
1	NORM	PLAY	Ponga la cinta de prueba STD-331B en reproducción (315 Hz, 0 dB).	VR451 (canal izquierdo) VR452 (canal derecho)	TP-L (canal izquierdo) TP-R (canal derecho)	-6,7 dBV	

3. Ajuste de las características de frecuencia de grabación/reproducción

- Como este procedimiento es para el ajuste de la polarización de grabación, tenga cuidado de no aumentar el valor de distorsión mediante el subajuste de la polarización.

Procedimiento	Selector de cinta	Modo	Señal de entrada / cinta de prueba	Punto de ajuste	Punto de medición	Valor de ajuste	Observaciones
1	NORM	REC	Cargue la cinta de prueba STD-630 y establezca el modo de grabación.	—	Área entre ① y ② (conjunto de A.F) mostrada en la Fig.10-1.	Confirme que la frecuencia de oscilación sea de 105 kHz $\pm$ 1 kHz.	Si el valor de ajuste no puede establecerse dentro de la especificación, ajuste T1401 del conjunto de REC.
2	NORM	REC	Aplique una señal de 315 Hz al terminal de entrada VIDEO y ajuste la función a "VIDEO".	Nivel de la señal de entrada	TP-L (canal izquierdo) TP-R (canal derecho)	-27,7 dBV	
3	NORM	REC / PLAY	Grabe y reproduzca la cinta de prueba STD-630 (315 Hz y 10 kHz).	VR411 (canal izquierdo) VR412 (canal derecho)	TP-L (canal izquierdo) TP-R (canal derecho)	Repita la corrección de forma que el nivel de reproducción de 10 kHz sea de 0 $\pm$ 0,5 dB en relación con 315 Hz.	

4. Ajuste del nivel de grabación

Procedimiento	Selector de cinta	Modo	Señal de entrada / cinta de prueba	Punto de ajuste	Punto de medición	Valor de ajuste	Observaciones
1	NORM	REC	Aplique una señal de 315 Hz al terminal de entrada VIDEO y ajuste la función a "VIDEO".	Nivel de la señal de entrada	TP-L (canal izquierdo) TP-R (canal derecho)	-7,7 dBV	
2	NORM	REC / PLAY	Grabe y reproduzca la cinta de prueba de forma que el nivel de reproducción de 315 Hz sea de -6,7 dBV.	VR521 (canal izquierdo) VR522 (canal derecho)	TP-L (canal izquierdo) TP-R (canal derecho)	Grabe y reproduzca la cinta de prueba de forma que el nivel de reproducción de 315 Hz sea de -6,7 dBV.	

• Procedimiento de comprobación para la secciones II

1. Acción del ALC

Procedimiento	Selector de cinta	Modo	Señal de entrada / cinta de prueba	Punto de ajuste	Punto de medición	Valor de ajuste	Observaciones
1	NORM	REC	Aplique una señal de 315 Hz al terminal de entrada VIDEO y ajuste la función a "VIDEO".	Nivel de la señal de entrada	TP-L (canal izquierdo) TP-R (canal derecho)	-7,7 dBV	
2				+10 dB contra el nivel de entrada del paso 1.		-2,7 dBV $\pm 2,5$ dB
