IMPORTANT NOTICE

This manual has been provided for the use of authorized Yamaha Retailers and their service personnel. It has been assumed that basic service procedures inherent to the industry, and more specifically Yamaha Products, are already known and understood by the users, and have therefore not been restated.

WARNING: Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components and failure of the product to perform as specified. For these reasons, we advise all Yamaha product owners that all service required should be performed by an authorized Yamaha Retailer or the appointed service representative.

IMPORTANT: This presentation or sale of this manual to any individual or firm does not constitute authorization, certification, recognition of any applicable technical capabilities, or establish a principal-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research engineering, and service departments of Yamaha are continually striving to improve Yamaha products. Modifications are, therefore, inevitable and changes in specification are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

WARNING: Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground bus in the unit (heavy gauge black wires connect to this bus).

IMPORTANT: Turn the unit OFF during disassembly and parts replacement. Recheck all work before you apply power to the unit.

LITHIUM BATTERY HANDLING

This product uses a lithium battery for memory back-up.

WARNING: Lithium batteries are dangerous because they can be exploded by improper handling. Observe the following precautions when handling or replacing lithium batteries.

- Leave lithium battery replacement to qualified service personnel.
- Always replace with batteries of the same type.
- When installing on the PC board by soldering, solder using the connection terminals provided on the battery cells.
- Never solder directly to the cells. Perform the soldering as quickly as possible.
- Never reverse the battery polarities when installing.
- Do not short the batteries.
- Do not attempt to recharge these batteries.
- Do not disassemble the batteries.
- Never heat batteries or throw them into fire.

ADVARSEL!

Lithiumbatteri-Eksplosionsfare ved fejlagtig håndtering. Udskiftning må kun ske med batteri af samme fabrikat og type. Levér det brugte batteri tilbage til leverandøren.

VARNING

Explosionsfara vid felaktigt batteribyte.

Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren.

Kassera använt batteri enligt fabrikantens instruktion.

VAROITUS

Paristo voi räjähtää, jos se on virheellisesti asennettu.

Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin.

■ FLASH ROM UPGRADE

The AD824 is equipped with flash memory (MAIN: IC927). The software in the flash memory can be upgraded from the COM PC/RS422 terminal. Upgrades can also be performed from a Windows PC using the dedicated software.

When the power is turned on, a check is made to confirm that the system program is in the flash memory. If the proper system is present, it is executed. If the program is not present, or if there is an error, the program boot mode is entered automatically.

* Warning*

The program cannot be loaded while the turning jig is attached to COM RS422 terminal (CN908) and the inspection jig is attached to the slot.

Check that has been removed before performing the upgrade.

1. Connection

Connect the PC and AD824 COM PC/RS422 terminals by Dsub 9 pin serial cross cables.

A changeover switch of PC/RS422 selects PC.

In addition, if connection is made in the following manner, upgrades can also be made to AD824 after the second unit. Note that a condition for this is that the device number has been set beforehand. (The software shown below is compatible up to the fourth unit.)

2. Software

LoadAD824/V1.0 is used as the software. When the folder is open, three files are displayed on the screen: LoadAD824.exe, TimeStamp.exe and 02rv2.dll. The two files requiring an upgrade are LoadAD824.exe and 02rv2.dll.

2-1. Start the software

Click on LoadAD824.exe. The program will start and the following screen will be displayed.

It is also possible to switch the PC COM terminal that is connected by the dialogue box in the upper right. (The figure shows that COM1 is selected.)

In addition, when loading the program to AD824 after the second unit, switching of the device number is done by the dialogue box at the upper center. (The figure shows that DEV 1 is selected.)

2-2. Connection with AD824

Click the [Connect] switch and the AD824 program is loaded. The commands are sent and if the connection is successful, the following message will appear.

Click OK and the AD824 will display the device number and part of the version of the current program in the 7segLED. For example, if the device number is 1 and the program version is 1.00, "d01" and "r1.0" will light up alternately.

2-3. Reading the files to be loaded

Click the [Browse] switch and the following window will open. Designate the files to be loaded to the AD824 and click the [Open] switch.

2-4. Loading the program

Click the [Load] switch and the program will start to load.
When completed, the following message will be displayed.

**2-5. Others**

Click the [Disconnect] switch to reset the AD824 to the regular mode.

■ ERROR MESSAGES

The AD824 performs several diagnostic checks when it's turned on. If a problem is detected, one of the following error codes appears briefly on the GAIN display.

<i>E 1</i>	Internal backup-battery voltage low.
<i>E 2</i>	Internal memory data corrupt.
<i>E 3</i>	Internal backup-battery voltage low and internal memory data corrupt.
