IMPORTANT NOTICE

This manual has been provided for the use of authorized Yamaha Retailers and their service personnel. It has been assumed that basic service procedures inherent to the industry, and more specifically Yamaha Products, are already known and understood by the users, and have therefore not been restated.

WARNING: Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components and failure of the product to perform as specified. For these reasons, we advise all Yamaha product owners that all service required should be performed by an authorized Yamaha Retailer or the appointed service representative.

IMPORTANT: This presentation or sale of this manual to any individual or firm does not constitute authorization, certification, recognition of any applicable technical capabilities, or establish a principal-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research engineering, and service departments of Yamaha are continually striving to improve Yamaha products. Modifications are, therefore, inevitable and changes in specification are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

WARNING: Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground bus in the unit (heavy gauge black wires connect to this bus).

IMPORTANT: Turn the unit OFF during disassembly and parts replacement. Recheck all work before you apply power to the unit.

WARNING: CHEMICAL CONTENT NOTICE!

The solder used in the production of this product contains LEAD. In addition, other electrical/electronic and/or plastic (where applicable) components may also contain traces of chemicals found by the California Health and Welfare Agency (and possibly other entities) to cause cancer and/or birth defects or other reproductive harm.

DO NOT PLACE SOLDER, ELECTRICAL/ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHAT SO EVER!

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

IMPORTANT NOTICE FOR THE UNITED KINGDOM**Connecting the Plug and Cord**

IMPORTANT. The wires in this main lead are coloured in accordance with the following code:

BLUE: NEUTRAL

BROWN: LIVE

As the colours of the wires in the main lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The BLUE wire must be connected to the terminal that is marked with the letter N (or coloured BLACK).

The BROWN wire must be connected to the terminal that is marked with the letter L (or coloured RED).

Be certain that neither core is connected to the earth terminal of the three pin plug.

■ WARNING

Components having special characteristics are marked  and must be replaced with parts having specification equal to those originally installed.

- 0 dBu=0.775 Vrms
- 0 dBV-1 Vrms=2.2 dBu
- The output impedance of the oscillator connected is 150 ohms.
- The input impedance of the oscilloscope and the level meter should be more than 100 k ohms.
- Distortion measurement is corrected at 80 kHz, -6 dB/OCT LPF.
- The load for output 1 to 8 is 600 ohms.
- Output 1 to 8 is measured at the cannon connector.
- Internal gain SW is +18 dB.
- Work clock in 75 ohms is set to on.
- Signal input of only the CH to be measured.
- Use AD824 and MY8-AE card and input signal.
- Input signal to AD824 NCH when measuring NCH.
- The setting for AD824 is gain 10 dB, word clock INT 48 kHz.

3. SLOT clock relationship check (automatic inspection)
4. SLOT power supply peripheral check (automatic inspection)
5. WORD CLOCK IN ↔ CPU connection check (automatic inspection)
6. Residual noise check (manual inspection)
7. COM terminal check (visual).
8. LOCK LED/POWER LED check (visual)

Execute the test program after loading DA824DIAG/V1.00 program.

2. Test procedure execution program

Connect the PC and COM terminals/ CN903 with a Dsub 9-pin serial cross cable and start the terminal software (such as Hyper Terminal).

The setting for the communication format is

Bit Rate: 38400 bps
 Data length: 8 bits
 Stop bit: 1
 Parity: none

The next time the power is turned on, the message

```
This is DA824 2000

```

will be displayed in the window for the terminal software.

Use the keyboard for the PC to enter "diag" and screen display will change to

```
DA824>diag
DA824 Diagnosis version Vx.xx MAR.2000
DA824_DIAG>
```

and the DA824 will enter the test program mode. The version of the test program will be shown as x.xx. To remove the test program mode, enter "reset". It will be displayed as followed and it will be the same as when the power is turned on.

```
DA824_DIAG>reset
This is DA824 2000
DA824>
```

3. Automatic inspection

Use the keyboard for the PC to enter "test" and execute program

```
DA824_DIAG>test
```

The following items will be inspected automatically. At the end, a list of items determined to be NG (no good) will be displayed on the screen.

<Inspection items (test)>

1. SRAM (IC926, IC927) ↔ CPU connection check
2. SLOT ↔ CPU
3. SLOT clock relationship connection check
4. SLOT power supply peripheral check
5. WORD CLOCK IN terminal/JK901 ↔ CPU connection check

If the four items shown above are OK,

```
DIAGNOSIS RESULT      OK
DA824_DIAG>
```

appears on the screen and the program ends. If one of the items is NG,

```
DIAGNOSIS RESULT      NG
ERROR LIST
[2]  SLOT DATA BUS      XXXX XXXX XXXX XXXX
      SLOT ADDR BUS      XXX XXXX XXX

4. Manual inspections

In addition to the automatic tests, the residual noise is measured.

1. Measurement conditions

- 0 dBu=0.775 Vrms
- The input Impedances of the oscilloscope and the level meter should be more than 100 k ohms.
- The measurement is corrected by 12.7 kHz, -6 dB/OCT LPF.
- The load for output 1 to 8 is 600 ohms.
- Output 1 to 8 is measured at the cannon connector.
- The internal gain SW is +18 dB.
- Word clock in 75 ohms is set to on.
- Input the signal only into the channel being measured.

2. Measuring method

In the test program mode, a digital 0 will be output from the slot test jig when the following command is executed.

In this state, a level gauge is used to measure residual noise. Check that the permissible range is less than -92 dBu.

```
DA824_DIAG>zero
```

```
DA824_DIAG>
```

5. System reset

```
DA824_DIAG>reset
```

```
The system is reset.
```

When in the test program mode, entering “reset” and executing the program will reset the system.

■ FLASH ROM UPGRADE

The DA824 is equipped with flash memory (MAIN:IC919). The software in the flash memory can be upgraded from the COM terminal. Upgrades can also be performed from a Windows PC using the dedicated software.

When the power is turned on, a check is made to confirm that the system program is in the flash memory. If the proper system is present, it is executed. If the program is not present, or if there is an error, the program boot mode is entered automatically.

* Warning*

When the inspection jig is inserted in the slot, the program cannot be loaded. Check that the inspection jig has been removed from the slot before performing the upgrade.

1. Connection

Connect the PC and DA824 COM terminals by Dsub 9 pin serial cross cables.

2. Software

LoadDA824/V1.0 is used as the software. When the folder is open, three files are displayed on the screen: LoadDA824.exe, TimeStamp.exe and 02rv2.dll. The two files requiring an upgrade are LoadDA824.exe and 02rv2.dll.

2-1. Start the software

Click on LoadDA824.exe. The program will start and the following screen will be displayed. (The dialog box can be used to switch the COM terminal connection.)

2-2. Connection with DA824

Click the [Connect] switch and the DA824 program is loaded. The commands are sent and if the connection is successful, the following message will appear. Click "OK" and LOCK LED and POWER LED on the DA824 will flash alternately.

2-3. Reading the files to be loaded

Click the [Browse] switch and the following window will open. Designate the files to be loaded to the DA824 and click the [Open] switch.

2-4. Loading the program

Click the [Load] switch and the program will start to load. When completed, the following message will be displayed. Moreover, [Dev1] is placed in the upper center of the dialog box.

2-5. Others

Click the [Disconnect] switch to reset the DA824 to the regular mode.
